Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with issuers with a poor NB ESG Quotient with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Climate Value-at-Risk:

Climate Value-at-Risk (“CVaR”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement. Due to data limitations, CVaR is not applied across all issuers held by the Portfolio and is instead limited to the

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

issuers for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio’s mandatory periodic report (as per the requirements of Article 11 of SFDR).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

N/A – the Portfolio does not commit to holding sustainable investments.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio does not commit to holding sustainable investments.

- — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

- — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio does not commit to holding Taxonomy-aligned investments.

### Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilises third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager’s subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The investment objective of the Portfolio is to aim to achieve a target average return of 1% over the Benchmark, the Bloomberg Global Aggregate Corporate Index (Total Return, Hedged USD), before fees over a market cycle (typically 3 years) from investing primarily in investment grade corporate fixed income securities globally. The Portfolio will invest primarily in investment grade fixed income securities issued by corporations, which have their head office or exercise an overriding part of their economic activity in OECD countries.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, credit worthiness is complemented by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

### ● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

#### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is a key component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

#### II. Engagement:

The Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process (including the investment selection process). Issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Sub-Investment Manager firmly believes this consistent engagement with issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

● ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of corporate issuers. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that, based on the Sub-Investment Manager's subjective analysis, is expected to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at an issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs, and (iv) ILO Standards.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for hedging and/or efficient portfolio management, it will not use derivatives to promote environmental or social characteristics.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy Regulation are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager is not committing that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. As such, the minimum proportion of the Portfolio's investments that contribute to environmentally sustainable economic activities for the purposes of the EU Taxonomy will be 0%. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by issuers. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of socially sustainable investments?**

N/A – the Portfolio does not commit to holding sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics. The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

N/A

- ***How does the designated index differ from a relevant broad market index?***

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***Where can the methodology used for the calculation of the designated index be found?***

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Distributing Classes in the Portfolio will be declared on a quarterly basis and paid within 30 Business Days thereafter.

### Subscriptions

Investors should note that notwithstanding Annex II in the Prospectus, Shares are only available in the Neuberger Berman Global Diversified Income FMP – 2024 in the A, I, X Classes.

Subscriptions for Shares in all Classes in the Portfolio will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List of the Main Securities Market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolios will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Global Diversified Income FMP– 2024

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The difference at any one time between the issue and repurchase price of Shares in the Portfolio means that the investment should be viewed as medium to long term. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

<b>Investment Objective</b>	To seek to maximise current income over the term of the Portfolio, by investing in a diversified mix of global fixed income securities, including high income securities.
<b>Investment Term and Maturity Date</b>	<p>Investors should note that the Portfolio seeks to provide an attractive yield over a specific term, which ends on the Maturity Date. On or within twelve months following a Portfolio's Maturity Date, the Directors intend to terminate the Portfolio and, following the liquidation of the portfolio of assets, return the proceeds thereof to Shareholders. As such, Shareholders who redeem prior to the Maturity Date may not experience the full yield the Portfolio is seeking to provide.</p> <p>The Maturity Date for the Portfolio will be four years from the end of the date of the launch of the Portfolio, immediately following the last day of the Initial Offer Period. The Maturity Date for the Portfolio is therefore currently expected to be 30 June 2024. The launch date and Maturity Date for the Portfolio will be included in the financial statements for the Portfolio once confirmed.</p>
<b>Investment Approach</b>	<p>The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide including within Emerging Market Countries. Securities will typically be dealt or traded on Recognised Markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a Recognised Rating Agency.</p> <p>The Sub-Investment Manager implements a disciplined investment process that is consistently applied across all fixed income sectors with an ongoing focus on identifying the most attractive investment opportunities in the fixed income market, building a well-diversified portfolio whilst minimising single credit issuer risk.</p> <p>In seeking to identify the most attractive fixed income sectors the Sub-Investment Manager seeks to evaluate research and sector valuations undertaken by speciality investment teams within the Sub-Investment Manager. The speciality teams formulate an investment view and project expected returns for the relevant sectors, based upon internal analysis taking into consideration the impact of the team's macroeconomic outlook. The macroeconomic outlook is formulated by taking into account the expectations of interest rates, inflation expectations, market sentiment and geo-political issues amongst others.</p> <p>Securities are then selected by screening the universe of eligible securities within each sector to formulate a "buy" list of actionable opportunities by identifying the individual securities that exhibit the characteristics which the Sub-Investment Manager considers attractive (eg, which are undervalued and higher yielding compared to other securities within the universe) and aligns with the investment objective and the Maturity Date.</p> <p>The Portfolio will predominantly invest in debt securities that mature before the Portfolio's Maturity Date and the Portfolio intends to hold such fixed income securities to maturity. However, the Portfolio may invest up to 20% of its Net Asset Value in fixed income securities with maturity dates that, at the time of their purchase, will extend up to 18 months beyond the Maturity Date. To the extent that proceeds from fixed income securities are received prior to the Portfolio's Maturity Date, the Portfolio may re-invest such amounts in other bonds in line with the Portfolio's objective or in cash and cash equivalents (such as U.S. Treasury securities). As such, as the Portfolio's Maturity Date approaches, the Portfolio will increasingly hold</p>

shorter dated securities, cash and cash equivalents and may hold up to 100% in such cash and cash equivalents.

Under normal market conditions, the Sub-Investment Manager anticipates that the Portfolio's average interest rate duration will be +0 to +5 years.

The Portfolio is actively managed; no benchmark is used for performance comparison purposes or as a universe for selection.

<b>Benchmark</b>	N/A
<b>Base Currency</b>	US Dollars (USD).
<b>Instruments / Asset Classes</b>	<p>The Portfolio will invest primarily in debt securities and money market instruments, issued by governments, government agencies and corporate issuers. The Portfolio can invest in or be exposed to the following types of assets.</p> <p><b>Fixed Income Securities (debt securities).</b> These securities may include:</p> <ul style="list-style-type: none"> <li>• Both fixed and floating rate debt securities, including bonds, issued by US and non-US governments, government agencies and corporations worldwide denominated in local currencies;</li> <li>• Corporate bonds, debentures and notes (freely transferable promissory notes);</li> <li>• Payment-in-kind bonds (which are bonds that pay interest in the form of additional bonds of the same kind);</li> <li>• Participation interests in loans (which are securitised and freely transferable);</li> <li>• Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities; and</li> <li>• Debt securities of the types described above issued by issuers in Emerging Market Countries.</li> </ul> <p>The Portfolio may invest up to 10% of its net assets in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.</p> <p>Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".</p> <p><b>Money Market Instruments.</b> These securities may include: bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade by Recognised Rating Agencies.</p> <p><b>Collective Investment Schemes.</b> The Portfolio may invest in underlying funds which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% in underlying funds (including ETFs which are structured as collective investment schemes) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such underlying funds may or may not be managed by the Manager and/or Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.</p> <ul style="list-style-type: none"> <li>• The underlying funds in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's requirements, which may be domiciled in the European Economic Area and will qualify as UCITS or alternative investment fund schemes and will be regulated as such by their home state regulator;</li> <li>• Underlying funds in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99%</li> </ul>

confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such underlying funds measure their global exposure; and

- ETFs are investment funds whose units may be bought and sold on a securities exchange. ETFs typically invest in a portfolio of securities that is designed to track the performance of a particular market segment or index. The ETFs will be located in a Member State of the European Economic Area and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Financial Derivative Instruments ("FDIs")** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement, the Portfolio may use the following FDI for efficient portfolio management, investment purposes, and/or hedging. The following FDI may provide exposure to any or all of the asset classes listed above:

- Swaps may include currency swaps, interest rate swaps, credit default swaps, fixed income securities swaps, UCITS eligible indices swaps and total return swaps and may be used to achieve a profit as well as to hedge existing long positions, foreign exchange swaps may be used to hedge existing long currency exposures. The maximum proportion of the Portfolio's Net Asset Value that can be subject to total return swaps is 20%. The expected proportion of the Portfolio's Net Asset Value that will be subject to total return swaps is 5%;
- Future contracts may be used to hedge or to gain exposure to an increase in the value of currencies, interest rates, fixed income securities and UCITS eligible bond indices;
- Options on fixed income securities, interest rates and UCITS eligible bond indices may be used to achieve a profit as well as to hedge existing long positions;
- Forward contracts on fixed income securities may be used to achieve a profit, through gaining exposure to an increase in the value of such securities as well as to hedge existing long positions; and
- Forward currency contracts may be used to hedge existing long currency exposures.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return.

The counterparties to OTC FDI entered into in respect of the Portfolio will be entities (which will not be related to the Sub-Investment Manager or its delegates) with legal personality which may be located globally. They will be subject to ongoing supervision by a public authority, be rated at or in excess of the requirements of the Central Bank by a Recognised Rating Agency and have the necessary organisational structure and resources for the relevant type of transaction

---

### Bond Connect

The PBoC and the HKMA have approved the CFETS, CCDC, SHCH, together with Hong Kong Exchanges and Clearing Limited and CMU to launch Bond Connect, which is a mutual bond market access programme between Mainland China and Hong Kong. Bond Connect allows investors to trade electronically between the Mainland China and Hong Kong bond markets without quota restrictions and requirements to identify the ultimate investment amount.

Currently, Bond Connect comprises a Northbound Trading Link between CFETS, the operator of the CIBM and offshore trading access platforms recognised by the PBoC, to facilitate investment by Hong Kong and overseas investors (including the Portfolio)

---

in eligible bonds traded on the CIBM. A Southbound Trading Link, facilitating investment in overseas bond markets by Mainland Chinese investors is still under development but is intended to form part of Bond Connect once established.

#### Eligible Securities

Hong Kong and overseas investors (including the Portfolio) will be able to trade over the entire range of instruments traded on the CIBM, including products on both the secondary and primary markets.

#### Trading Day

Northbound investors (including the Portfolio) are able to trade through Bond Connect on days upon which the CIBM is open to trade, regardless of whether they are a public holiday in Hong Kong.

#### Settlement and Custody

Settlement and custody of Northbound bond trades under Bond Connect will be implemented under the link between the CMU of the HKMA and Mainland China's two bond settlement systems, namely, CCDC and SHCH. The CMU settles Northbound trades and holds the CIBM bonds on behalf of its members in nominee accounts with each of CCDC and SHCH. CCDC and SHCH provide services to foreign investors, directly and indirectly, using Bond Connect.

Bonds purchased by Hong Kong and overseas investors (including the Portfolio) are recorded in an omnibus nominee account at CCDC and SHCH in the name of CMU. The CMU itself maintains the bonds in segregated sub-accounts of its members, who in turn may hold the bonds on their own account or on behalf of other investors or custodians. Accordingly, bonds purchased by Hong Kong and overseas purchasers through Bond Connect are held by the purchaser's global or local custodian in a segregated sub-account opened in their name at the CMU.

#### Currency

Hong Kong and overseas investors may trade through Bond Connect using offshore RMB (CNH) or by converting foreign currencies into onshore RMB (CNY) under Bond Connect.

Where an investor uses foreign currencies to invest through the Northbound Trading Link, it must open a segregated RMB capital account with an eligible RMB settlement Bank in Hong Kong to convert its foreign currencies into CNY. Where bonds are purchased in CNY in this manner, upon sale of the bonds, the sale proceeds remitted out of Mainland China must be converted back into the relevant foreign currencies.

Further information about Bond Connect is available at:

<http://www.chinabondconnect.com/en/index.htm>

#### **Investment Restrictions**

- The Portfolio may invest up to 40% of its Net Asset Value in debt securities issued in Emerging Market Countries.
- The Portfolio may invest up to 50% of its Net Asset Value in below investment grade securities.
- The Portfolio may invest up to 10% of its Net Asset Value in participation interests in loans (which are securitised and freely transferable).
- The Portfolio will not utilise securities lending, repurchase and reverse repurchase agreements or margin lending.

#### **Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the "Investment Risks" section of the Prospectus. While investors should read and consider the entire "Investment Risks" section of the Prospectus, the risks summarised in the following sections, namely, "Market Risks: Risks relating to Debt Securities" and "Risks related to Financial Derivative Instruments" are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers,**

**before making an application for Shares.**

- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.
- The Manager and/or the Sub-Investment Manager will use forward and future currency contracts in order to hedge currency risk on a discretionary basis. The use of such hedging techniques may increase the risk profile of the Portfolio.

**Environmental, Social and Governance ("ESG")**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.** However, investors should note that, if there is a substantial amount of cash held prior to the Maturity Date and before a decision has been made to close the Portfolio, the Manager will review the Portfolio's asset allocation and potentially the Portfolio's SFDR classification to determine if they still remain appropriate.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

**Typical Investor Profile**

The Portfolio may be suitable for investors who are seeking a return over the medium to long term from exposure primarily to a portfolio of debt securities from issuers worldwide that are held to the Portfolio's stated Maturity Date of 30 June 2024. Investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept moderate levels of volatility. Investors are likely to hold the Portfolio as a complement to a diversified portfolio and would typically have an investment horizon aligned to the maturity date of the Portfolio.

**Fees and Expenses**

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A	5.00%	0.80%	0.00%
I	0.00%	0.40%	0.00%
X	0.00%	0.80%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the "Administration Fees" heading in the "Fees and Expenses" section of the Prospectus.

SFDR Annex

1. NEUBERGER BERMAN GLOBAL DIVERSIFIED INCOME FMP – 2024

SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman Global Diversified Income FMP – 2024 (the “Portfolio”)  
**Legal entity identifier:** 549300577U1V3H24JG33

**Environmental and/or social characteristics**

**Does this financial product have a sustainable investment objective?**

**Yes**                        **No**

<p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective:</b> ___%</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective:</b> ___%</p>	<p><input type="checkbox"/> It promotes <b>Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul> <p><input checked="" type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>
---	---

**What environmental and/or social characteristics are promoted by this financial product?**

Given the Portfolio's investment objective, investment term and Maturity Date (30 June 2024), while significant ESG events or violations of the exclusion policies applied by the Portfolio, as described below, in respect of an issuer may result in changes to the Portfolio's holdings, the Portfolio's turnover is likely to be limited. Therefore while the Portfolio will promote environmental and social characteristics throughout its lifetime, the promotion of environmental and social characteristics is focused on the portfolio construction phase as the intention of the Sub-Investment Manager is to maintain low turnover.

As part of the portfolio construction phase of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are promoted using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising, at the point of inception, investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

Given the Portfolio seeks to provide a yield over a specific term, which ends on the Maturity Date, while significant ESG events or violations of the ESG exclusion policies (described below) in respect of an issuer may result in changes to the Portfolio’s holdings, the Portfolio’s turnover is likely to be limited.

While, the Portfolio will promote environmental and social characteristics throughout its lifetime, the Sub-Investment Manager’s promotion of environmental and social characteristics as well as good governance practices will therefore primarily focus on initial portfolio construction. In order to ensure the characteristics and practices are upheld by the Portfolio’s investments, the Sub-Investment Manager will conduct ongoing ESG engagement with issuers as described below.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

Given the Portfolio’s investment objective, investment term and Maturity Date, while the Portfolio will promote environmental and social characteristics throughout its lifetime, the promotion of environmental and social characteristics is focused on the portfolio construction phase as the intention of the Sub-Investment Manager is to maintain low turnover. As part of the portfolio construction phase of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially

where a poor NB ESG Quotient rating is not being addressed by an issuer, are more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with companies which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement. Due to data limitations, CVaR is not applied across all issuers held by the Portfolio and is instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Portfolio also excludes corporate debt issuers in Emerging Market Countries that are involved in the tobacco industry and child labour. Further details on these ESG exclusion policies are set out in the "Sustainable Investment Criteria" section of the main body of the Prospectus".

Given the Portfolio seeks to provide a yield over a specific term, which ends on the Maturity Date, while significant ESG events or violations of the ESG exclusion policies, in respect of an issuer may result in changes to the Portfolio's holdings, the Portfolio's turnover is likely to be limited.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

N/A – the Portfolio does not commit to holding sustainable investments.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio does not commit to holding sustainable investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

--- How have the indicators for adverse impacts on sustainability factors been taken into account?

N/A

--- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or al objectives.*

N/A – The Portfolio does not commit to holding Taxonomy-aligned investments.

#### Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager utilises third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The investment objective of the Portfolio is to seek to maximise current income over the term of the Portfolio, by investing in a diversified mix of global fixed income securities, including high income securities. The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide (including within Emerging Market Countries). Securities will typically be dealt or traded on Recognised Markets (as depicted in Annex I of the Prospectus) globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a Recognised Rating Agency.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

In addition, credit worthiness is complemented by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

### ● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

Given the Portfolio's investment objective, investment term and Maturity Date, while the Portfolio will promote environmental and social characteristics throughout its lifetime, the promotion of environmental and social characteristics is focused on the portfolio construction phase as the intention of the Sub-Investment Manager is to maintain low turnover.

ESG characteristics are considered at three different levels:

#### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is a key component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio, at the point of inception. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to not be included as part of the Portfolio construction.

#### II. Engagement:

The Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process as it allows the Sub-Investment Manager to ensure that its initial assessment of the issuer (at the point of inception) remains accurate and informs the issuer's ongoing NB ESG Quotient rating. Issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to

same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

The Sub-Investment Manager firmly believes this consistent engagement with issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above which places limitations on the investable universe.

For the avoidance of doubt, these binding elements of the investment strategy will continue to be binding throughout the entire lifetime of the Portfolio.

#### ● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

#### ● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of corporate issuers. As explained above, the Sub-Investment Manager views this direct engagement with issuers as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at an issuer, or through influence and action to mitigate risks (including sustainability risks).

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

#### **What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
- In fossil gas       In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of socially sustainable investments?**

N/A - the Portfolio does not commit to holding sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, UNGPs, OECD Guidelines and ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A - The Portfolio does not use a benchmark.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

● **How does the designated index differ from a relevant broad market index?**

N/A

● **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## GLOBAL EQUITY SUPPLEMENT 6 DECEMBER 2023

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-funds, each of which is a separate portfolio of the Company:

**NEUBERGER BERMAN EMERGING MARKETS EQUITY FUND**

**NEUBERGER BERMAN JAPAN EQUITY ENGAGEMENT FUND**

(the “Portfolios”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to the Portfolios, this Supplement shall prevail. Each SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the relevant Portfolio in accordance with SFDR. Each SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of an SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR for a Portfolio, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	with respect to the Neuberger Berman Emerging Markets Equity Fund, a day (except Saturday or Sunday) on which the relevant financial markets in London, New York and Hong Kong are open for business, provided that, if on any such day, the period during which banks in Hong Kong are open for normal trading is reduced as a result of a tropical cyclone warning signal (number 8 or higher), a black rainstorm warning signal or other similar event, such day shall not be a Business Day unless the Directors otherwise determine; and  with respect to the Neuberger Berman Japan Equity Engagement Fund, a day (except Saturday or Sunday) on which the relevant financial markets in London and Tokyo are open for business;
<b>ChinaClear</b>	China Securities Depository and Clearing Corporation Limited;
<b>CSRC</b>	the China Securities Regulatory Commission of the PRC, the government agency responsible for matters relating to securities regulation;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in each Portfolio;
<b>Dealing Deadline</b>	with respect to the Neuberger Berman Emerging Markets Equity Fund, 3.00 pm (Irish time) on the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day; and  with respect to the Neuberger Berman Japan Equity Engagement Fund, 3.00 pm (Irish time) on the Business Day before the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the Business Day before the relevant Dealing Day;
<b>HKSCC</b>	Hong Kong Securities Clearing Company Limited;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of a Portfolio;
<b>Portfolios</b>	the Neuberger Berman Emerging Markets Equity Fund and the Neuberger Berman Japan Equity Engagement Fund;
<b>SFDR Annex</b>	each annex hereof setting out the pre-contractual disclosures template with respect to a Portfolio, prepared in accordance with the requirements of Article 8 of SFDR;
<b>Shanghai Stock Connect</b>	the Shanghai-Hong Kong Stock Connect program;
<b>Shenzhen Stock Connect</b>	the Shenzhen-Hong Kong Stock Connect program;
<b>Stock Connect</b>	either or both of the Shanghai Stock Connect and the Shenzhen Stock Connect;
<b>SEHK</b>	the Stock Exchange of Hong Kong;
<b>SSE</b>	the Shanghai Stock Exchange;
<b>SZSE</b>	the Shenzhen Stock Exchange; and
<b>Sub-Investment Manager</b>	(a) with respect to the Neuberger Berman Emerging Markets Equity Fund, Neuberger Berman Europe Limited, Neuberger Berman Investment

Advisers LLC and Neuberger Berman Asia Limited or such other company as may be appointed by the Manager from time to time in respect of any particular Portfolio, with the prior approval of the Company and the Central Bank; and

- (b) with respect to the Neuberger Berman Japan Equity Engagement Fund, Neuberger Berman Europe Limited, Neuberger Berman East Asia Limited or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolios carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of the information specific to each Portfolio, as included in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolios will achieve their respective objectives. While there are some risks described below that may be common to a number or all of the Portfolios, there may also be specific risk considerations which apply only to particular Portfolios.

## Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolios shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter; and
- each of the other Distributing Classes in the other Portfolios shall be declared on an annual basis and paid within 30 Business Days thereafter in relation to the Net Income of the Distributing Classes for the calendar year ended the previous 31 December.

## Subscriptions and Redemptions

Subscriptions for Shares in all Classes of each Portfolio which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched, from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolios will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Emerging Markets Equity Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Portfolio will not use FDI extensively or primarily for investment purposes.**

<b>Investment Objective</b>	Achieve long-term capital growth.
<b>Investment Approach</b>	<p>The Portfolio will invest primarily in equity and equity-linked securities which are listed or traded on Recognised Markets globally and issued by companies that: (1) trade principally on a recognised stock exchange in Emerging Market Countries; (2) are organised under the laws of and have a principal office in Emerging Market Countries; or (3) derive 50% or more of their total revenues from, and/or have 50% or more of their total assets in, goods produced, sales made, profits generated or services performed in Emerging Market Countries. The Portfolio may also invest in other collective investment schemes which provide exposure to such securities, subject to a maximum of 10% of the Portfolio's Net Asset Value.</p> <p>The Sub-Investment Manager uses a fundamental bottom-up, research-driven securities selection approach focusing on high return businesses while factoring in economic, legislative and business developments to identify countries and economic sectors (such as energy, financials, health care, telecommunications and utilities) that it believes may be particularly attractive.</p> <p>The Sub-Investment Manager seeks to invest in companies that it believes have sustainable free cash flow growth and are trading at attractive valuations.</p> <p>The Sub-Investment Manager believes that in-depth, strategic and financial research is the key to identifying undervalued companies and seeks to identify companies with the following characteristics:</p> <ul style="list-style-type: none"> <li>• Stock prices undervalued relative to long-term cash flow growth potential;</li> <li>• Industry leadership;</li> <li>• Potential for significant improvement in the company's business;</li> <li>• Strong financial characteristics;</li> <li>• Strong corporate governance practices; and</li> <li>• Management track record.</li> </ul> <p>The Portfolio seeks to reduce risk by diversifying among many industries within the countries and economic sectors it identifies. Although it has the flexibility to invest a significant portion of its assets in one country or region, it generally intends to remain diversified across countries and geographical regions.</p> <p>The Sub-Investment Manager follows a disciplined selling strategy and may sell a stock when it reaches a target price, when the company's business fails to perform as expected, or when other opportunities appear more attractive.</p> <p>The Portfolio may invest in companies of any market capitalisation and may include a broader geographical exposure than the country constituents of the index disclosed below under "Benchmark".</p> <p>The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes and because the Portfolio's investment policy restricts the extent to which the Portfolio's holdings may deviate from the Benchmark, as described above and in the "Investment Restrictions" section. This deviation may be significant.</p>
<b>Benchmark</b>	The MSCI EM Index (Total Return, Net of Tax, USD), which is a free float adjusted market capitalisation weighted index of large and mid-cap securities across a number of emerging markets globally. The index is subject to rebalancing and the list of specific emerging market countries and names are subject to change in line with the MSCI's applicable methodology.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

**Base Currency**

US Dollars (USD).

---

**Instruments / Asset Classes**

The Portfolio can invest in or be exposed to the following types of assets.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock and American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution, each of which may, subject to the UCITS Regulations, be listed or unlisted.

**ETFs.** ETFs are investment companies whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index, in this case Emerging Market Countries with a focus on equities. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be non-UCITS which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. The REITs which the Portfolio will invest in may be based globally but will give exposure to underlying properties located in Emerging Market Countries. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.

**Participatory Notes.** Participatory Notes which are freely transferable securities issued by banks or broker-dealers that are designed to replicate the performance of certain issuers and markets by giving exposure to the performance of specific stocks that the Portfolio may not be able to invest in directly because of local holding restrictions affecting such stocks in the jurisdiction of their issue.

**Fixed Income Securities (Debt Securities).** Any debt instruments invested in may be issued by corporate or government issuers, may be rated or unrated (although not more than 30% of the Portfolio's Net Asset Value will be invested in debt instruments which are rated below investment grade) and may have fixed or floating interest rates.

**Financial Derivative Instruments ("FDI").** The Portfolio may, subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, use FDI, including, without limitation, warrants (including equity warrants), rights (including equity rights), convertible bonds, currency futures contracts, forward currency contracts and convertible preferred stock which may be used for investment purposes or to hedge or to achieve exposure to a particular security. Convertible bonds enable the holder to convert their investment in the bonds into the issuer's common stock at a pre-agreed price and convertible preferred stock enable the holder to convert their investment in the preferred stock into the issuer's common stock at a pre-agreed rate. Futures contracts based on securities of the types described above and equity indices (which meet the requirements of the Central Bank for use by UCITS), may be used to achieve a profit as well as to hedge existing positions.

The Portfolio will be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

---

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

### Stock Connect

The China Securities Regulatory Commission and the Securities and Futures Commission of Hong Kong have an approved program which establishes mutual stock markets access between the PRC and Hong Kong, namely Stock Connect. The Sub-Investment Manager may pursue the Portfolio's investment objective by investing up to 20% of the Portfolio's Net Asset Value directly in certain eligible China A Shares via Stock Connect.

The Shanghai Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SSE. The Shenzhen Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SZSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SZSE.

Each of the Shanghai Stock Connect and Shenzhen Stock Connect comprises a Northbound Trading Link and a Southbound Trading Link. Under the Northbound Trading Link, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions), through their Hong Kong brokers and a securities trading service company established by the SEHK, may trade Eligible Securities listed on the SSE and the SZSE by routing orders to the SSE and the SZSE respectively.

#### Eligible Securities

Among the different types of SSE-or SZSE-listed securities, only China A Shares and ETFs are currently permitted for Northbound trading under Stock Connect.

Currently, Hong Kong and overseas investors are able to trade certain SSE Securities. Eligible Securities under the Northbound Trading Link of the Shanghai Stock Connect include all the constituent stocks from time to time of the SSE 180 Index and SSE 380 Index, and all the SSE-listed China A Shares that are not included as constituent stocks of the relevant indices but which have corresponding China H Shares listed on the SEHK, except the following:

- SSE-listed shares which are not traded in CNY; and
- SSE-listed shares which are included in the "risk alert board".

Eligible Securities under the Northbound Trading Link of the Shenzhen Stock Connect include any constituent stock of the SZSE Component Index and the SZSE Small/Mid Cap Innovation Index which has a market capitalisation of CNY6 billion or above and all SZSE-listed shares of companies which have issued both China A Shares and China H Shares, except the following:

- SZSE-listed shares which are not traded in CNY; and
- SZSE-listed shares which are included in the "risk alert board" or under delisting arrangement.

In addition, Hong Kong and overseas investors are able to trade eligible SSE-listed and SZSE-listed ETFs that satisfy the relevant criteria at a regular review and are accepted as eligible ETFs for Northbound trading under Stock Connect. Regular reviews will be performed to determine the eligible ETFs for Northbound trading every six months.

It is expected that the list of Eligible Securities will be subject to review and may change from time to time.

If an Eligible Security ceases to be classified as such, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions) will only be allowed to sell holdings of such Eligible Security but will be restricted from buying any more of such Eligible Security.

#### Trading day

Investors (including the Portfolio, subject to its investment approach and restrictions) are only allowed to trade through Stock Connect on days on which both markets are

---

open for trading, and banking services are available in both markets on the corresponding settlement days.

#### Trading quota

Trading under Stock Connect is subject to the Daily Quota. Northbound trading through each Stock Connect is subject to a separate set of Daily Quota. The Daily Quota limits the maximum net buy value of cross-boundary trades under each Stock Connect per day. The SEHK will monitor the quota and publish the remaining balance of the Northbound Daily Quota at scheduled times on the SEHK's website. The Daily Quota may change from time to time without prior notice and investors should refer to the SEHK's website and other information published by the SEHK for up-to-date information.

#### Settlement and custody

The HKSCC will be responsible for the clearing, settlement and the provision of depository, nominee and other related services of the trades executed by Hong Kong market participants and investors.

The Eligible Securities traded through Stock Connect are issued in scripless form, so investors do not hold any physical securities. Hong Kong and overseas investors who have acquired Eligible Securities through Northbound trading should maintain the Eligible Securities with their brokers' or custodians' stock accounts with CCASS, operated by HKSCC.

#### Corporate actions and shareholders' meetings

Notwithstanding the fact that the HKSCC does not claim proprietary interests in the Eligible Securities held in its omnibus stock account in ChinaClear, ChinaClear as the share registrar for the Eligible Securities will still treat HKSCC as one of the shareholders when it handles corporate actions in respect of such Eligible Securities.

HKSCC monitors the corporate actions affecting Eligible Securities and keeps the relevant brokers or custodians participating in CCASS ("CCASS participants") informed of all such corporate actions that require CCASS participants to take steps in order to participate in them.

SSE and SZSE-listed companies usually announce their annual general meeting / extraordinary general meeting information about one month before the meeting date. A poll is called on all resolutions for all votes. HKSCC will advise CCASS participants of all general meeting details such as meeting date, time, venue and the number of resolutions.

#### Foreign shareholding restrictions

The CSRC stipulates that, when holding China A Shares through Stock Connect, Hong Kong and overseas investors are subject to the following shareholding restrictions:

- Single foreign investors' shareholding by any Hong Kong or overseas investor in a China A Share must not exceed 10% of the total issued shares; and
- Aggregate foreign investors' shareholding by all Hong Kong and overseas investors in a China A Share must not exceed 30% of the total issue shares.

Should the shareholding of a single investor in a China A Share listed company exceed the above restriction, the investor would be required to unwind his position on the excessive shareholding according to a last-in-first-out basis within a specific period. The SSE, the SZSE and the SEHK will issue warnings or restrict the buy orders for the related China A Shares if the percentage of total shareholding is approaching the upper limit.

SSE and SZSE-listed ETFs are not subject to the aforementioned shareholding restrictions.

---

---

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities, subject to its investment approach and restrictions.

#### Trading fees and taxes

In addition to paying trading fees and stamp duties in connection with trading of Eligible Securities, the Portfolio may be subject to other fees and taxes concerned with income arising from transfers of stocks or ETFs (if applicable) which are determined by the relevant authorities.

Further information about Stock Connect is available online at the website:

[https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc\\_lang=en](https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc_lang=en)

---

#### **Investment Restrictions**

- The Portfolio may invest in China A Shares up to 20% of its Net Asset Value or in China B Shares up to 10% of its Net Asset Value. The Portfolio may invest directly in the China A Share market through Stock Connect as described above and indirectly, mainly through investments in equity linked products issued by financial institutions such as QFIs and through transferable securities which may be issued by entities which are managed by affiliates of the Manager. The Portfolio may invest directly in the China B Share market.
- The Portfolio may invest up to 10% of its Net Asset Value in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.
- Investments in units of other collective investment schemes are limited to a maximum of 10% of the Portfolio's Net Asset Value.
- The Portfolio may not invest greater than 20% of its Net Asset Value in non-Emerging Market Countries' securities.
- The Portfolio's over or underweight exposure to a particular country, relative to the Benchmark, may not exceed 10% of the Portfolio's Net Asset Value.
- The Portfolio's over or underweight exposure to a Global Industry Classification Standard (GICS)<sup>®</sup> sector, relative to the Benchmark, may not exceed 10% of the Portfolio's Net Asset Value.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

---

#### **Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the "Investment Risks" section of the Prospectus. While investors should read and consider the entire "Investment Risks" section of the Prospectus, the risks summarised in the following section, namely, "Market Risks: Risks relating to Emerging Market Countries" are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
  - Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
  - The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.
  - The Portfolio will seek to reduce risk by diversifying among securities from a broad range of countries, sectors and industries.
  - The Sub-Investment Manager may be delayed in or prevented from investing in certain Emerging Market Countries by local restrictions on foreign investment. or registration requirements for foreign investors, such as the Portfolio
  - The Sub-Investment Manager will use forward currency contracts in order to
-

hedge currency risk.

- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.

#### Environmental, Social and Governance (“ESG”)

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are systematically considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager assesses securities in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors seeking an exposure to Emerging Market Countries' equities through an investment approach that is diversified across industries, countries and regions.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	2.00%	0.00%
B, C1, C2, E	0.00%	2.00%	1.00%
C	0.00%	1.30%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	1.00%	0.00%
M	2.00%	2.00%	1.00%
P	5.00%	0.95%	0.00%
T	5.00%	2.00%	0.00%
U	3.00%	1.50%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
B	4%	3%	2%	1%	0%
C, C1	1%	0%	0%	0%	0%
C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

Notwithstanding the information set out under the “Classes” section within “Annex II – Share Class Information” to the Prospectus, please note that, subject to any transitional period or other arrangement agreed with Shareholders

in the relevant Classes, Shares in the Category B, C2 and E Classes will automatically convert into Shares in the corresponding T Class, at no additional cost to holders of such Shares, upon the expiry of four years (Category B Classes), two years (Category C2 Classes) and three years (Category E Classes) from the date of the initial subscription into the relevant B, C2 or E Class.

#### **Other important information for investors in Hong Kong**

As the Portfolio has been authorised for public offer in Hong Kong, the Hong Kong Securities and Futures Commission (“HKSF”) requires the Company to classify the Portfolio on the basis of its expected maximum net derivative exposure (“NDE”). The HKSF requires the NDE to be calculated in accordance with the HKSF’s Code on Unit Trusts and Mutual Funds and the requirements and guidance issued by the HKSF, which may be updated from time to time. This requires the Company to convert all FDI acquired for investment purposes that would generate incremental leverage at the portfolio level of the Portfolio into their equivalent positions in the underlying assets. Applying these requirements, the Portfolio’s NDE is expected to be less than 50% but the actual level may be higher than the expected level in exceptional circumstances, for example when there are sudden movements in markets and/or investment prices.

For the avoidance of doubt, complying with the HKSF’s requirements to classify the Portfolio on the basis of its NDE does not amend the investment objectives or policies or otherwise impact the management of the Portfolio or its use of FDI, as the requirements are solely to measure the Portfolio’s expected use of FDI, as described above, using the HKSF’s methodology and disclose the results.

## Neuberger Berman Japan Equity Engagement Fund

**The Portfolio will not use FDI extensively or primarily for investment purposes. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

### Investment Objective

The Portfolio aims to achieve a target average return of 3% over the Benchmark (as specified in the “*Benchmark*” section below) before fees over a market cycle (typically 3 years) from investing primarily in a portfolio of Japanese equity holdings.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

### Investment Approach

The Portfolio will primarily invest in equity securities issued by small and mid-capitalisation companies which have either their head office or exercise an overriding part of their economic activity in Japan and that are listed or traded on Recognised Markets globally.

The Sub-Investment Manager generally considers small and mid-capitalisation companies to be those with a total market capitalisation of less than 1 trillion Japanese Yen at the time of initial purchase. The Portfolio may continue to hold a position in corporations even after their market capitalisations exceed 1 trillion Japanese Yen

Investors should note that this Portfolio seeks to apply the Sustainable Exclusion Policy, as such term is defined within the “*Sustainable Investment Criteria*” section of the Prospectus. Investors should refer to the information contained in that section for further details about the application of the Sustainable Exclusion Policy to the Portfolio.

As described in greater detail below, the Sub-Investment Manager will employ a research driven, bottom-up, fundamental approach to stock selection, with a long term perspective that combines both quantitative analysis and qualitative judgment to identify investments that the Sub-Investment Manager considers to be attractive and have the potential to increase their corporate value and achieve sustainable growth, through active engagement i.e. constructive and purposeful dialogue, based upon a deep understanding of the investment company and their business environment.

In seeking to achieve the Portfolio’s investment objective, the Sub-Investment Manager pursues the following three step investment process to identify a universe of securities:

- **Quantitative screening:** to identify high quality companies i.e. those with a high return on equity or sustainable profit margins or companies that the Sub-Investment Manager believes are priced at a deep discount to their intrinsic value and with identifiable reasons for the discount, for example because of low analyst coverage of the smaller company universe;
- **Qualitative business analysis:** to identify companies which the Sub-Investment Manager believes have the most durable business models and those with opportunities for value creation through active engagement with those companies, for example through dialogue with company management on optimising business practice and active shareholder voting on corporate issues; and
- **Strategic valuation and analysis:** to evaluate the stocks identified through the first two steps and rate them using the Sub-Investment Manager’s proprietary system of in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success.

The Sub-Investment Manager applies a score to each stock which is generated on the basis of: (i) the above three step investment process; (ii) ESG factors (as referred to below); and (iii) valuation. Stocks are then ranked using these scores, which are reviewed at least six times a year, through the review of quarterly financial results and company visits. The Sub-Investment Manager reviews the constituents of this 'watch list' four times a year.

The Sub-Investment Manager will then seek to construct a portfolio which is well-diversified across economic sectors with securities selected based upon those that score highly in the ranking system and following an assessment of the risk exposures. Investors should note that this is expected to result in a Portfolio which may be relatively more concentrated than other portfolios which cover the same broad market, subject to the diversification requirements of the UCITS Regulations.

The Portfolio may also invest in money market instruments on an ancillary basis.

The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes and because the Portfolio's investment policy restricts the extent to which the Portfolio's holdings may deviate from the Benchmark, as described in the "Investment Restrictions" section. This deviation may be significant.

---

#### Benchmark

The MSCI Japan Small Cap Net Index (Total Return, JPY), which measures the performance of the small-capitalisation segment of the Japanese market.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

#### Base Currency

Japanese Yen (JPY).

---

#### Instruments / Asset Classes

The Portfolio can invest in or be exposed to the following types of assets, which will be listed or traded on Recognised Markets globally or, if unlisted, will comply with the Central Bank requirements for such investments.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock and American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. The REITs which the Portfolio will invest in may be based globally but will give exposure to underlying properties located in Japan. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.

**Financial Derivative Instruments ("FDIs").** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, the Portfolio may use FDI for hedging, efficient portfolio management and/or investment purposes:

- Convertible bonds and convertible preferred stock. Convertible bonds enable the holder to convert their investment in the bonds into the issuer's common stock at a pre-agreed price and convertible preferred stock enable the holder to convert their investment in the preferred stock into the issuer's common stock at a pre-agreed rate;
  - Forward currency contracts may be used for efficient portfolio management and to hedge existing long currency exposures;
  - Equity warrants and equity rights may be used for investment and efficient portfolio management purposes, including to hedge or to achieve exposure to a
-

---

particular security;

- Options on equity securities may be used to hedge existing long positions or to achieve profit; and
- Futures contracts based on securities of the types described above and UCITS eligible equity indices, may be used to achieve a profit as well as to hedge existing positions.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to achieve a rate of return greater than the market. The indices utilised for hedging or efficient portfolio management purposes will be broad-based, UCITS-eligible indices which provide exposure to the performance of equities and details of such indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes (including ETFs which are structured as collective investment schemes) which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% of its Net Asset Value in other collective investment schemes which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 200% of their net asset value; (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**ETFs.** ETFs are investment companies whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index, in this case Japanese equities. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be non-UCITS which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under "Collective Investment Schemes" above, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**Repo Contracts.** The Portfolio may use Repo Contracts subject to the conditions and limits set out in the Prospectus.

---

**Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the “*Investment Restrictions*” section of the Prospectus and the UCITS Regulations.
- The Portfolio's over or underweight exposure to a particular Global Industry Classification (GICS) economic sector, relative to the Benchmark, may not exceed 20%.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

**Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the risks summarised in the following section, namely, “*Market Risks: Risks relating to Concentration Risk*” are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

**Environmental, Social and Governance (“ESG”)**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

The Portfolio invests in securities that meet criteria set out in the Sustainable Exclusion Policy, as detailed in the “*Sustainable Investment Criteria*” section of the Prospectus.

ESG risks and opportunities are systematically considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager assesses securities in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

**Typical Investor Profile**

The Portfolio may be suitable for investors seeking capital appreciation opportunities through equity investments in smaller Japanese companies. Investors need to be comfortable with the risks associated with the Portfolio, in particular risks of investing in small-capitalisation companies and be prepared to accept periods of market volatility particularly over short time periods. Investors are likely to hold the Portfolio as a complement to a diversified portfolio and should have a long-term investment horizon.

## Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.70%	0.00%
B, C2, E	0.00%	1.70%	1.00%

<b>E</b>	3%	2%	1%	0%	0%

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus.

SFDR Annexes

1. **NEUBERGER BERMAN EMERGING MARKETS EQUITY FUND**
2. **NEUBERGER BERMAN JAPAN EQUITY ENGAGEMENT FUND**

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman Emerging Markets Equity Fund (the “Portfolio”)  
**Legal entity identifier:** 549300XPW2SIPQYGFT52

## Environmental and/or social characteristics

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector in Emerging Market Countries. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies in Emerging Market Countries relative to their environmental and social characteristics.

By embedding local insight into the global NB materiality matrix, the Sub-Investment Manager leverages the global NB materiality matrix and customizes material ESG characteristics to ensure that they are bespoke for Emerging Market Countries. The NB materiality matrix fully considers the long-term ESG characteristics that affect the development of Emerging Market Countries’ industries and companies and seeks out companies that are value drivers in the Emerging Market Countries.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities issued by companies with a favourable and/or an improving NB ESG Quotient rating.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; data privacy & security; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise. The Sub-Investment Manager leverages the NB materiality matrix and local insight into the Emerging Market Countries to customize the material ESG factors for Emerging Market Countries. When considering Emerging Market Countries, the Sub-Investment Manager evaluates the long-term ESG factors and value drivers for Emerging Market Countries’ industries and the companies that operate in them.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Companies with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by a company, are more likely to be removed from the investment universe or divested from the Portfolio.

II. Climate Value-at-Risk:

Climate Value-at-Risk (“CVaR”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

N/A

— — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the ILO Standards, the UNGC Principles and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio does not commit to holding Taxonomy-aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

### **What investment strategy does this financial product follow?**

The Portfolio will invest primarily in equity and equity-linked securities which are listed or traded on Recognised Markets globally and issued by companies that: (1) trade principally on a recognised stock exchange in Emerging Market Countries; (2) are organised under the laws of and have a principal office in Emerging Market Countries; or (3) derive 50% or more of their total revenues from, and/or have 50% or more of their total assets in, goods produced, sales made, profits generated or services performed in Emerging Market Countries.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Companies with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Companies with a poor NB ESG Quotient rating especially where these are not being addressed by that company, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance is also considered such as revenue/earnings before interest, tax, depreciation, and amortisation (“**EBITDA**”) growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

- I. Integrating proprietary ESG analysis:

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Companies with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Companies with a poor NB ESG Quotient rating especially where these are not being addressed by that company, are more likely to be removed from the investment universe or divested from the Portfolio.

## II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

Furthermore, in order to maintain and enhance company relationships, and to ensure companies follow their ESG trajectory, the Sub-Investment Manager keeps an active dialogue with companies, regardless of whether or not they have high impact controversies or a low NB ESG Quotient rating.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

## III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above which places limitations on the investable universe.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

## ● What is the policy to assess good governance practices of the investee companies?

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement, based on the Sub-Investment Manager's subjective analysis, that is expected to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

## What is the asset allocation planned for this financial product?

**Asset allocation** describes the share of investments in specific assets.

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas     In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of socially sustainable investments?**

N/A – the Portfolio does not commit to holding sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A - The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

N/A

- ***How does the designated index differ from a relevant broad market index?***

N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

## SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman Japan Equity Engagement Fund (the “Portfolio”)  
**Legal entity identifier:** 549300ELGQMFUUPHG878

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics (see below) as part of its scoring model. The Sub-Investment Manager applies a Neuberger Berman (“NB”) proprietary ESG score which is bespoke to the Japanese market. The NB proprietary ESG score also considers engagement potential as key components in its scoring model. The NB proprietary ESG score also considers the environmental and social characteristics identified in the NB materiality matrix, which is based on the Sustainability Accounting Standards Board (“SASB”) materiality framework. The NB materiality matrix focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB proprietary ESG score:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Promotion of these environmental and social characteristics will be measured through the NB proprietary ESG score, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB proprietary ESG score are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB proprietary ESG score change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The following sustainability indicators will be used to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB proprietary ESG score:

The NB proprietary ESG score (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB proprietary ESG score is the proprietary NB materiality matrix (which, as explained above, is based on the SASB materiality framework). The NB materiality matrix focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB proprietary ESG score assigns weightings to environmental, social and governance factors for each sector to derive an NB proprietary ESG score for companies held by the Portfolio. Companies with a favourable and/or an improving NB proprietary ESG score receive higher scores, which is a key area of consideration in raising the companies' weight in the Portfolio. Conversely, companies with a poor NB proprietary ESG score, especially where a poor NB proprietary ESG score is not being addressed by a company, are more likely to receive lower scores that could result in reducing the companies' weight in the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with holding issuers to support their efforts in addressing key issues the Sub-Investment Manager deems critical to the company's business fundamentals and long-term growth including material environment and social issues. The success of the Sub-Investment Manager's constructive engagement efforts with companies will depend on each company's receptiveness and responsiveness to such engagement.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the top 10 companies in the Portfolio, which the Sub-Investment Manager believes have the highest climate transition risk and the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards.

Additionally, the Portfolio will also apply the Sustainable Exclusion Policy. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB proprietary ESG score; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

- — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

- — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager’s subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

#### **What investment strategy does this financial product follow?**

The objective of the Portfolio is to achieve a target average return of 3% over the MSCI Japan Small Cap Net Index (Total Return, JPY) before fees over a market cycle (typically 3 years) from investing primarily in a portfolio of Japanese equity holdings.

The Portfolio will primarily invest in equity securities issued by small and mid-capitalisation companies which have either their head office or exercise an overriding part of their economic activity in Japan and that are listed or traded on Recognised Markets globally.

The Sub-Investment Manager will employ a research driven, bottom-up, fundamental approach to stock selection, with a long term perspective that combines both quantitative analysis and qualitative judgment to identify investments that the Sub-Investment Manager considers to be attractive and have the potential to increase their corporate value and achieve sustainable growth, through active engagement i.e. constructive and purposeful dialogue, based upon a deep understanding of the investment company and their business environment.

ESG considerations are integrated throughout the investment process: starting with investment universe screening, followed by company-level due diligence, and finally the NB proprietary ESG score that ultimately helps determine the company’s weighting in the portfolio.

The Sub-Investment Manager believes engaging companies on financially material issues such as capital management and ESG topics enables them to improve the fundamental quality of their holdings over the medium to longer term horizon. The Sub-Investment Manager also believes that in addition to the engagement of capital management and corporate governance elements, which often other asset managers try to focus on, engagement of environment and social responsibility issues enhances long term sustainability of the company’s business. These factors are inextricably linked and for this reason the responsibility of the strategy’s ESG analysis and engagement, including proxy voting, rests on the investment team and not on a separate entity such as a stewardship or responsible investing team. This ensures that the Sub-Investment Manager’s engagement on material ESG issues is linked to factors that move the needle specifically for the business and ultimately performance of the portfolio. The Sub-Investment Manager believes core to the success of engagement is 1) to select the right companies, which is based on in-depth qualitative/quantitative analysis and dialogue with the management, and 2) set clear engagement plans and roadmaps based on past successes and know-how from other teams.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

As noted above, for environment and social responsibility issues, the Sub-Investment Manager takes a top-down approach, through the NB proprietary ESG score. The NB proprietary ESG score leverages the NB materiality matrix to identify the sustainability factors that could have a material impact on the sustainability of the company. The Sub-Investment Manager will then scrutinize these issues with respect to the business model, value chain, growth phase of the company, and competitive position to highlight high-priority issues that need to be addressed immediately. This is done through on-the-ground research combing through years of publicly available company disclosure and through meetings with the company, competitors, suppliers, clients, and external research providers, if available.

II. Engagement:

As noted above, once the Portfolio has invested in a company, the Sub-Investment Manager will set an engagement objective and a customized strategy to address the financially material issues identified in the scoring process. The Sub-Investment Manager's engagement with portfolio holdings is aimed at helping these companies achieve long-term growth. As long-term investors focused on bottom-up stock selection, the Sub-Investment Manager believes that through in-depth engagement on capital management, financially material environment and social issues, and corporate governance, they can help the company sustain a growth profile over the long-term that will ultimately contribute to the Portfolio's performance. The Sub-Investment Manager's experience engaging with companies has shown that smaller companies require more time and resources to address these issues (average 2-3 years for environmental and social issues). Hence, given this relatively lengthy process, the Sub-Investment Manager has adopted a milestone system to ensure engagement remains on track to achieve the objective.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above which places limitations on the investable universe.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

● **What is the policy to assess good governance practices of the investee companies?**

On corporate governance, the Sub-Investment Manager employs a bottom-up approach assessing the company's governance framework on a case-by-case basis. This is based on the Sub-Investment Manager's view that a company's corporate governance evolves in accordance with the growth phase of the business. However, a key underlying theme within the Sub-Investment Manager's analysis is the protection of shareholder rights and management's commitment to growing corporate value over the long-term. To objectively evaluate the company's governance framework, the Sub-Investment Manager focuses on three key components: 1) diversity and independence, 2) management structure, 3) management vision and execution.

On diversity and independence, the Sub-Investment Manager looks for boards with an appropriate level of independence and a strong representation of not just gender but also of skill set and experience that can help foster dynamic discussions about the company's long-term strategy while also ensuring adequate monitoring of management.

On management structure, the Sub-Investment Manager looks for frameworks that protect and safeguard the contribution of independent executives in the overall board structure.

Finally, on management vision and execution, the Sub-Investment Manager looks for management to set a long-term vision and for the current business plan to be designed to achieve that goal from both a capital management and sustainability standpoint. The goal of

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

this corporate governance analysis is to ensure that management continues to run the business to achieve sustainable long-term growth for the sake of all shareholders. In the event that the investment holding undertakes poor corporate-governance action(s) that the Sub-Investment Manager believes will be detrimental to shareholder rights and ultimately to the long-term sustainable growth of the company, the Sub-Investment Manager will analyse the severity of the incident and will reflect this in the NB proprietary score accordingly. Concurrently, the Sub-Investment Manager will engage the company to address the issue(s) in an appropriate and timely manner. However, if the Sub-Investment Manager believes the issue is not rectifiable via engagement, it may choose to further lower the score and/or exit the position.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

### What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB proprietary score or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
- In fossil gas       In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of socially sustainable investments?**

N/A – the Portfolio does not commit to holding sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

● ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

N/A

● ***How does the designated index differ from a relevant broad market index?***

N/A

● ***Where can the methodology used for the calculation of the designated index be found?***

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## HIGH YIELD SUPPLEMENT

### 6 DECEMBER 2023

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-funds, each of which is a separate portfolio of the Company:

**NEUBERGER BERMAN HIGH YIELD BOND FUND**

**NEUBERGER BERMAN SHORT DURATION HIGH YIELD SDG ENGAGEMENT FUND**

**NEUBERGER BERMAN EUROPEAN HIGH YIELD BOND FUND**

**NEUBERGER BERMAN GLOBAL HIGH YIELD SDG ENGAGEMENT FUND**

(the “Portfolios”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to the Portfolios, this Supplement shall prevail. Each SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the relevant Portfolio in accordance with SFDR. Each SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of an SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR for a Portfolio, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	with respect to: <ul style="list-style-type: none"> <li>(a) the Neuberger Berman High Yield Bond Fund, the Neuberger Berman Short Duration High Yield SDG Engagement Fund and the Neuberger Berman Global High Yield SDG Engagement Fund a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business; and</li> <li>(b) the Neuberger Berman European High Yield Bond Fund a day (except Saturday or Sunday) on which the relevant financial markets in London are open for business;</li> </ul>
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in each Portfolio;
<b>Dealing Deadline</b>	with respect to each Portfolio (except for the Neuberger Berman European High Yield Bond Fund), 3.00 pm (Irish time) on the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day;  with respect to the Neuberger Berman European High Yield Bond Fund, 11.00 am (Irish time) on the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application up to 12.30 pm (Irish time) on the relevant Dealing Day;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of a Portfolio;
<b>Portfolios</b>	the Neuberger Berman High Yield Bond Fund, the Neuberger Berman Short Duration High Yield SDG Engagement Fund, the Neuberger Berman European High Yield Bond Fund and the Neuberger Berman Global High Yield SDG Engagement Fund;
<b>SDGs</b>	the United Nations Sustainable Development Goals;
<b>SFDR Annex</b>	each annex hereof setting out the pre-contractual disclosures template with respect to a Portfolio, prepared in accordance with the requirements of Article 8 of SFDR; and
<b>Sub-Investment Manager</b>	In relation to all the Portfolios, Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC, or such other company as may be appointed by the Manager from time to time in respect any particular Portfolio, with the prior approval of the Company and the Central Bank.  In addition, in relation to the Neuberger Berman Global High Yield SDG Engagement Fund, Neuberger Berman Singapore Pte. Limited or such other company as may be appointed by the Manager from time to time in respect any particular Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolios carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of the information specific to each Portfolio, as included in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolios will achieve their respective objectives. While there are some risks described below that may be common to a number or all of the Portfolios, there may also be specific risk considerations which apply only to particular Portfolios.

### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Weekly) Distributing Classes in the Neuberger Berman High Yield Bond Fund shall be declared and paid on or prior to the last Business Day of each week. Other than in respect of the Neuberger Berman High Yield Bond Fund, there will be no (Weekly) Distributing Classes in any of the other Portfolios;
- each of the (Monthly) Distributing Classes in the Portfolios shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the (Monthly) Gross Income Distributing Classes in the Portfolios shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other (Gross) Income Distributing Classes in the Portfolios shall be declared on a quarterly basis and paid within thirty Business Days thereafter; and
- each of the other Distributing Classes in the Portfolios will be declared on a quarterly basis and paid within 30 Business Days thereafter.

## Subscriptions and Redemptions

Subscriptions for Shares in all Classes in each Portfolio which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the share classes shall be as follow:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched, from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolios will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

### Neuberger Berman High Yield Bond Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Portfolio will not use FDI extensively or primarily for investment purposes.**

**Investment Objective** Achieve an attractive level of total return (income plus capital appreciation) from the high yield fixed income market.

**Investment Approach** The Portfolio will aim to achieve its objective by investing primarily in:

- High yield fixed income securities issued by US and foreign corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- High yield fixed income securities issued by governments and agencies in the US that are primarily denominated in US Dollars,

that are listed, dealt or traded on Recognised Markets without any particular focus on any one industrial sector.

The Portfolio is typically diversified across issuers and industry sectors. The Sub-Investment Manager will seek to select securities from the result of in-depth credit research, utilising proprietary analytical tools which seek to assess the strength of a company's credit profile, examples of which include but are not limited to:

- (i) their ability to pay principal and interest, their cash flow and balance sheet composition;
- (ii) their market position relative to competitors; and
- (iii) the Sub-Investment Manager's assessment of Environmental, Social, and Governance (ESG) factors through the NB ESG Quotient as well as proactive engagement on ESG related topics.

In addition, the Sub-Investment Manager may seek to (where applicable):

- (i) capitalise on market opportunities in areas of the high yield market which the Sub-Investment Manager believes are undervalued (on the basis of the criteria outlined above); and/or
- (ii) generate added value through:
  - avoidance of credit deterioration, either as a result of a decline in credit rating based on internal research and/or external rating agencies or which occurs when the Sub-Investment Manager believes, based on research, that the fundamentals of a security are in decline and accordingly will dispose of or will not invest in such securities;
  - relative value analysis (i.e. seeking to exploit perceived under or over valuation of assets (based on views of, including, but not exhaustive, ratings, corporate fundamentals and industry) carried out as part of the Sub-Investment Manager's proprietary research; and
  - industry and quality rotation by selling out of a security in one industry or credit tier and buying into another.

The Portfolio aims to manage credit risk through disciplined credit analysis and diversification of credit quality. The Portfolio intends to opportunistically rotate quality and sector exposures throughout the credit cycle, maintaining a higher quality bias in High-Yield Bonds when the Sub-Investment Manager believes an economic downturn is underway and increasing lower quality holdings of High-Yield Bonds when the Sub-Investment Manager believes an economic expansion is underway. With regard to interest rate risk, the Sub-Investment Manager is sensitive to the overall duration of the portfolio in relation to the Benchmark and will seek to evaluate the duration of potential new portfolio acquisitions in conjunction with credit analysis. The Portfolio invests its assets in a broad range of issuers, industry sectors and maturities.

Under normal market conditions, the Sub-Investment Manager anticipates that the Portfolio's Weighted Average Maturity will be between 5-10 years.

The Portfolio may opportunistically invest up to 10% of its Net Asset Value in participation interests in floating or adjustable rate senior secured loans, which are securitised and freely transferable, and which meet the regulatory criteria to be considered money market instruments.

The Portfolio may also invest, on an ancillary basis, in unlisted money market instruments issued by companies located throughout the world.

In addition, although the Portfolio will concentrate its investments in the US, the Portfolio may also invest in securities of companies located in and governments of Emerging Market Countries, which may involve additional risk, relative to investment in more developed economies.

The Portfolio may also invest, on an ancillary basis, in equity securities as set out below in the “*Instruments/Asset Classes*” section and unlisted money market instruments issued by companies located throughout the world.

The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes and because the Portfolio’s investment policy restricts the extent to which the Portfolio’s holdings may deviate from the Benchmark, as described above. This deviation may be significant.

---

#### **Benchmark**

The ICE BofA US High Yield Constrained Index (Total Return, USD), which covers the universe of fixed rate, non-investment grade debt.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

#### **Base Currency**

US Dollars (USD).

---

#### **Instruments / Asset Classes**

The Portfolio will invest mainly in high yield fixed income securities. The Portfolio can invest in or be exposed to the following types of assets.

**Fixed Income Securities (Debt securities).** These securities may include:

- Both fixed and floating rate securities;
- Corporate bonds, convertible bonds, debentures and notes (including freely transferable and unleveraged structured notes and freely transferable promissory notes);
- Contingent convertible bonds, subject to a limit of up to 10% of the Portfolio’s Net Asset Value;
- Debt securities issued by governments and commercial banks;
- Privately issued mortgage-backed securities, asset-backed securities, structured securities that derive interest and principal payments from specified assets or indices (including mortgage-backed securities such as pass-through certificates, collateralised mortgage obligations, and interest and principal only components of mortgage-backed securities);
- Collateralised mortgage obligations, payment-in-kind bonds (which are bonds that pay interest in the form of additional bonds of the same kind);
- Collateralised loan obligations, subject to a limit of up to 10% of the Portfolio’s Net Asset Value; and
- Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities that are rated below investment-grade (often referred to as “junk bonds”).

**Money Market Instruments.** These securities may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, participation interests in loans (which are securitised and freely transferable), cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

---

**Equity Securities.** Equity securities (both common and preferred) issued by US and other issuers which are listed, dealt or traded on Recognised Markets.

**Financial Derivative Instruments (“FDIs”).** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement, the Portfolio may use the following FDI for hedging and/or efficient portfolio management:

- Swaps may include currency swaps, interest rate swaps, credit default swaps, index swaps and total return swaps to obtain exposure to the broad high yield fixed income market pending investment in the securities described above and to hedge existing long positions. The maximum proportion of the Portfolio’s Net Asset Value that can be subject to total return swaps is 10%. The expected proportion of the Portfolio’s Net Asset Value that will be subject to total return swaps is 0%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Future contracts based on interest rates, fixed income securities and UCITS eligible bond indices may be used to hedge interest rate risk and existing long positions;
- Options on UCITS eligible bond index futures and UCITS eligible bond indices may be used to achieve a profit as well as to hedge existing long positions;
- Forward contracts on fixed income securities may be used to achieve a profit, through gaining exposure to an increase in the value of such securities as well as to hedge existing long positions; and
- Forward currency contracts may be used to achieve a profit through gaining exposure to an increase in the value of currencies, as well as to hedge existing long currency exposures.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed in this “*Instrument/Asset Classes*” section. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to add excess return. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities to add excess return. Any indices to which exposure is taken through FDI will be broad-based, UCITS-eligible indices which provide exposure to the performance of the types of assets in which the Portfolio may invest, as described in this “*Instruments/Asset Classes*” section. Details of such indices utilised by the Portfolio will be contained in the annual report of the Company.

The counterparties to OTC FDI entered into in respect of the Portfolio will be entities (which will not be related to the Manager or its delegates) with legal personality which may be located globally. They will be subject to ongoing supervision by a public authority, be rated at or in excess of the requirements of the Central Bank by a Recognised Rating Agency and have the necessary organisational structure and resources for the relevant type of transaction.

The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio’s Net Asset Value, as measured using the Commitment Approach, at any time.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

### Investment Restrictions

- Under normal market conditions, it is the intention of the Sub-Investment Manager to invest at least 80% of the Portfolio’s Net Asset Value in high yield fixed income securities. High yield fixed income securities are medium or lower rated securities, generally those rated below investment grade (Baa3, BBB- or above) by one or more Recognised Rating Agency, sometimes referred to as “junk bonds”.
- There are no restrictions on the average maturity of the Portfolio or the maturity of any single instrument. Maturities may vary widely depending on the Sub-Investment Manager’s assessment of interest rate trends and other economic and market factors.
- Any cash held by the Portfolio will be held solely as an ancillary liquid asset.

- The Portfolio may not invest more than 10% of its Net Asset Value in equity securities.
- The Portfolio may invest up to 10% of its Net Asset Value in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.
- The Portfolio will not utilise securities lending or margin lending.
- The maximum holding in a single issuer is 5% of the Portfolio's Net Asset Value.

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the "*Investment Risks*" section of the Prospectus. While investors should read and consider the entire "*Investment Risks*" section of the Prospectus, the risks summarised in the following section, namely, "*Market Risks: Risks relating to Debt Securities*" are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Sub-Investment Manager will seek to anticipate spread movements in response to changes in economic conditions, industry fundamentals, issuer specific financial performance and other issuer specific factors. Investment decisions will be based on analysis of historical spread relationships, break-even yield spread analysis and total return projections.
- The Sub-Investment Manager will use forward currency contracts in order to hedge currency risk.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

#### Environmental, Social and Governance ("ESG")

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are systematically considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager assesses securities in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors who are prepared to accept the risks of the bond market together with higher levels of price volatility than generally associated with fixed income funds due to the Portfolio's investment policies or portfolio management techniques.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.20%	0.00%
B, C1, C2, E	0.00%	1.80%	1.00%
C	0.00%	0.80%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.60%	0.00%
M	2.00%	1.20%	0.60%
P	5.00%	0.57%	0.00%
T	5.00%	1.80%	0.00%

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
U	3.00%	0.90%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C, C1</b>	1%	0%	0%	0%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

Notwithstanding the information set out under the “Classes” section within “Annex II – Share Class Information” to the Prospectus, please note that, subject to any transitional period or other arrangement agreed with Shareholders in the relevant Classes, Shares in the Category B, C2 and E Classes will automatically convert into Shares in the corresponding T Class, at no additional cost to holders of such Shares, upon the expiry of four years (Category B Classes), two years (Category C2 Classes) and three years (Category E Classes) from the date of the initial subscription into the relevant B, C2 or E Class.

#### Other important information for investors in Hong Kong

As the Portfolio has been authorised for public offer in Hong Kong, the Hong Kong Securities and Futures Commission (“HKSF”) requires the Company to classify the Portfolio on the basis of its expected maximum net derivative exposure (“NDE”). The HKSF requires the NDE to be calculated in accordance with the HKSF’s Code on Unit Trusts and Mutual Funds and the requirements and guidance issued by the HKSF, which may be updated from time to time. This requires the Company to convert all FDI acquired for investment purposes that would generate incremental leverage at the portfolio level of the Portfolio into their equivalent positions in the underlying assets. Applying these requirements, the Portfolio’s NDE is expected to be less than 50% but the actual level may be higher than the expected level in exceptional circumstances, for example when there are sudden movements in markets and/or investment prices.

For the avoidance of doubt, complying with the HKSF’s requirements to classify the Portfolio on the basis of its NDE does not amend the investment objectives or policies or otherwise impact the management of the Portfolio or its use of FDI, as the requirements are solely to measure the Portfolio’s expected use of FDI, as described above, using the HKSF’s methodology and disclose the results.

### Neuberger Berman Short Duration High Yield SDG Engagement Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Portfolio will not use FDI extensively or primarily for investment purposes. Investors should note that, notwithstanding the Portfolio's investment objective, this Portfolio is not considered to be an impact fund.**

<b>Investment Objective</b>	Generate high current income by investing in short-duration high yield fixed income securities that comply with the terms of the Sustainable Exclusion Policy and seek to produce investment returns, support better-functioning capital markets and have a positive social and environmental impact.
<b>Investment Approach</b>	<p>The Portfolio will aim to achieve its objective by investing primarily in:</p> <ul style="list-style-type: none"> <li>• Short duration, high yield fixed income securities issued by US and non-U.S. corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and</li> <li>• Short duration, high yield fixed income securities issued by governments and agencies in the US that are primarily denominated in US Dollars,</li> </ul> <p>that comply with the terms of the Sustainable Exclusion Policy and are listed, dealt or traded on Recognised Markets without any particular focus on any one industrial sector.</p> <p>The Portfolio promotes the environmental and social characteristics detailed in the SFDR Annex. In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager intends to reduce the Portfolio's carbon footprint across scope 1, 2, and material scope 3 greenhouse gas ("GHG") emissions<sup>1</sup>, equating to a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Further details on Neuberger Berman's commitment to the Net Zero Asset Manager Initiative are contained in the "<i>Sustainable Investment Criteria</i>" section of the Prospectus.</p> <p>The Portfolio seeks to promote the achievement of the SDGs by engaging with at least 90% of corporate issuers, on incremental actions that they can take within their products, services, operations or processes which are aligned with these goals (or where there is potential for increased alignment with these goals, following engagement with these companies). Engagement with corporate issuers will take place within 12 months of purchasing the securities issued by the corporate issuer.</p> <p>The Sub-Investment Manager also maintains an average ESG rating for the Portfolio that is above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which will be assessed based on third party ESG scores from an established external provider.</p> <p>The Sub-Investment Manager will exclude companies that are involved in controversial activities and behaviour, such as the production of controversial weapons, fur manufacturers, gambling, nuclear power or non-compliance with the UNGC Principles. The application of the Sustainable Exclusion Policy, as such terms are defined in the "Sustainable Investment Criteria" section of the Prospectus, means that companies involved in tobacco, manufacture of civilian firearms and operation of private prisons will also be excluded. Investors should refer to the information contained in that section and the SFDR Annex for further details about the application of the Sustainable Exclusion Policy to the Portfolio.</p> <p>The Sub-Investment Manager will then assess the remaining investment universe, which involves in-depth research and analysis of companies' ESG profiles and will also exclude companies that show poorly on the NB ESG Quotient.</p>

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

The Sub-Investment Manager will ensure that securities representing at least 90% of the Net Asset Value of the Portfolio are covered by the NB ESG Quotient. Through these two ESG exclusionary steps, the Sub-Investment Manager will exclude at least 20% of components of the investment universe which are rated the weakest in terms of the NB ESG Quotient.

The Portfolio is typically diversified across issuers and industry sectors. Although it may invest in securities of any maturity, the Portfolio normally seeks to maintain a weighted average portfolio duration of three years or less. The Sub-Investment Manager will seek to select securities from the result of in-depth credit research, utilising proprietary analytical tools which seek to assess the strength of a company's credit profile, examples of which include but are not limited to:

- (i) their ability to pay principal and interest, their cash flow and balance sheet composition, and
- (ii) their market position relative to competitors.

In addition, the Sub-Investment Manager may seek to (where applicable):

- (i) capitalise on market opportunities in areas of the high yield market which the Sub-Investment Manager believes are undervalued (on the basis of the criteria outlined above); and/or
- (ii) generate added value through:
  - avoidance of credit deterioration, either as a result of a decline in credit rating based on internal research and/or external rating agencies or which occurs when the Sub-Investment Manager believes, based on research, that the fundamentals of a security are in decline and accordingly will dispose of or will not invest in such securities;
  - relative value analysis (i.e. seeking to exploit perceived under or over valuation of assets (based on views of, including, but not exhaustive, ratings, corporate fundamentals and industry) carried out as part of the Sub-Investment Manager's proprietary research; and
  - industry and quality rotation by selling out of a security in one industry or credit tier and buying into another.

The Portfolio endeavours to manage credit risk and minimise interest rate risk through disciplined credit analysis and emphasis on short-term and intermediate-term maturities. The Portfolio intends to focus, among other things, on issuer cash flows, management and sources of repayment and decrease exposure to securities with deteriorating fundamentals and financials.

The Portfolio may opportunistically invest up to 10% of its Net Asset Value in participation interests in floating or adjustable rate senior secured loans, which are securitised and freely transferable, and which meet the regulatory criteria to be considered money market instruments.

The Portfolio may also invest, on an ancillary basis, in equity securities as set out below in the "Instruments/Asset Classes" section and unlisted money market instruments issued by companies located throughout the world.

The Sub-Investment Manager anticipates that under normal market conditions the Portfolio's duration will be 3 years or less, although this may vary as market conditions change.

The Portfolio is actively managed; no benchmark is used for performance comparison purposes or as a universe for selection. The ICE BofA U.S. High Yield Index is used exclusively for ESG rating comparison purposes and carbon intensity reduction comparison purposes only.

<b>Benchmark</b>	N/A
<b>Base Currency</b>	US Dollars (USD).

**Instruments / Asset Classes**

The Portfolio will invest primarily in short duration, high yield fixed income securities. The Portfolio can invest in or be exposed to the following types of assets.

**Fixed Income Securities (Debt securities).** These securities may include:

- Both fixed and floating rate securities, issued by governments and commercial banks;
- Corporate bonds, convertible bonds, debentures and notes (including freely transferable and unleveraged structured notes and freely transferable promissory notes);
- Contingent convertible bonds, subject to a limit of up to 10% of the Portfolio's Net Asset Value;
- Privately issued mortgage-backed securities, asset-backed securities, structured securities (including mortgage-backed securities such as pass-through certificates, collateralised mortgage obligations and interest and principal only components of mortgage-backed securities) that derive interest and principal payments from specified assets (including residential and commercial mortgages, credit card debt, pools of other kinds of loans);
- Collateralised mortgage obligations, payment-in-kind bonds (which are bonds that pay interest in the form of additional bonds of the same kind);
- Collateralised loan obligations, subject to a limit of up to 10% of the Portfolio's Net Asset Value; and
- Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities that are rated below investment-grade (often referred to as "junk bonds").

High yield fixed income securities are medium or lower rated securities, generally those rated below investment grade (Baa3, BBB- or above) by one or more Recognised Rating Agency, sometimes referred to as "junk bonds".

**Money Market Instruments.** These securities may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, participation interests in loans (which are securitised and freely transferable), cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

**Equity Securities.** Equity securities (both common and preferred) issued by US and other issuers which are listed, dealt or traded on Recognised Markets

**Financial Derivative Instruments ("FDIs").** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement, the Portfolio may use the following FDI for hedging, efficient portfolio management and/or other investment purposes:

- Swaps may include foreign exchange, interest rate swaps, index swaps and total return swaps and may be used to achieve a profit, to obtain exposure to the broad short duration, high yield fixed income market pending investment in the securities described above, as well as to hedge existing long positions. The maximum proportion of the Portfolio's Net Asset Value that can be subject to total return swaps is 10%. The expected proportion of the Portfolio's Net Asset Value that will be subject to total return swaps is 0%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Future contracts may be used to hedge or to gain exposure to an increase in fixed income securities or currencies; and
- Forward currency contracts may be used to achieve a profit through gaining exposure to an increase in the value of currencies, as well as to hedge existing long currency exposures.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Sub-Investment Manager may be invested in the other types of securities listed in this "Instruments/Asset Classes" section. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities to add excess return. The Sub-

Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities to add excess return. Any indices to which exposure is taken through FDI will be broad-based, UCITS-eligible indices which provide exposure to the performance of the types of assets in which the Portfolio may invest, as described in this “*Instruments/Asset Classes*” section. Details of such indices utilised by the Portfolio will be contained in the annual report of the Company.

The counterparties to OTC FDI entered into in respect of the Portfolio will be entities (which will not be related to the Manager or its delegates) with legal personality which may be located globally. They will be subject to ongoing supervision by a public authority, be rated at or in excess of the requirements of the Central Bank by a Recognised Rating Agency and have the necessary organisational structure and resources for the relevant type of transaction.

The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio’s Net Asset Value, as measured using the Commitment Approach, at any time.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

#### Investment Restrictions

- Under normal market conditions, it is the intention of the Sub-Investment Manager to invest at least 80% of the Portfolio’s Net Asset Value in high yield fixed income securities which are rated below investment grade.
- Any cash held by the Portfolio will be held solely as an ancillary liquid asset.
- The Portfolio may not invest more than 10% of its Net Asset Value in equity securities.
- The Portfolio will not invest in Emerging Market Countries.
- The Portfolio may invest up to 10% of its Net Asset Value in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.
- The Portfolio will not utilise securities lending or margin lending.
- The maximum holding in a single issuer is 5% of the Portfolio’s Net Asset Value.

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the risks summarised in the following section, namely, “*Market Risks: Risks relating to Debt Securities*” are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Sub-Investment Manager will take a disciplined approach to investing on behalf of the Portfolio by attempting to maintain a portfolio that is typically diversified across issuers, industry sectors and, within the scope of the targeted Portfolio duration, maturities.
- The Sub-Investment Manager will seek to anticipate spread movements in response to changes in economic conditions, industry fundamentals, issuer specific financial performance and other issuer specific factors. Investment decisions will be based on analysis of historical spread relationships, break-even yield spread analysis and total return projections.
- The Sub-Investment Manager will use forward currency contracts in order to hedge currency risk.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio’s Net Asset Value, as measured using the Commitment Approach, at any time.

**Environmental, Social and Governance ("ESG")**

The Portfolio has been classified as an Article 8 Portfolio as it invests in securities issued by those issuers that promote both environmental and social characteristics. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

As noted above, the Portfolio's investment objective is to generate high current income by investing in short-duration high yield fixed income securities that comply with the Sustainable Exclusion Policy and seek to produce investment returns, support better-functioning capital markets and have a positive social and environmental impact.

Accordingly, the Sub-Investment Manager applies the (i) Controversial Weapons Policy, and (ii) the Sustainable Exclusion Policy, when determining what investments to make for the Portfolio. Further details on these screening/exclusion policies are set out in the "*Sustainable Investment Criteria*" section of the Prospectus.

The Sub-Investment Manager will also manage the Portfolio in accordance with the ESG Policy on a continuous basis. The Sub-Investment Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process. A summary of the ESG Policy is detailed in the SFDR Annex to the Prospectus and is available on the Neuberger Berman website, [www.nb.com/esg](http://www.nb.com/esg).

As noted above, the Sub-Investment Manager intends to align the Portfolio with a net-zero goal.

The Sub-Investment Manager directly engages with investee companies and establishes engagement objectives for each investee company / corporate issuer, aligned with the SDGs. As part of the engagement with investee companies / corporate issuers, the Sub-Investment Manager will assess the investee company's / corporate issuer's progress in implementing the engagement objectives (i.e. contributing towards achievement of the UN Sustainable Development Goals) on an ongoing basis. If an investee being evaluated shows no signs of progress in achieving the abovementioned objectives and the Sub-Investment Manager sees no path to improvement, the Sub-Investment Manager may reduce the Portfolio's position in this investee and may consider divesting from the issuer. This direct engagement is an essential part of the investment process and the Portfolio's promotion of environmental and social characteristics.

ESG factors are integral to the Sub-Investment Manager's investment process. In particular, investment is prioritised in corporate issuers whose current business products and services are aligned with the UN Sustainable Development Goals (or where there is potential for increased alignment with these goals, following engagement with those companies by the Sub-Investment Manager, as described above).

ESG analysis is performed by the Sub-Investment Manager along with the support of third-party data. The research analysts use their sector expertise to customise criteria for each industry, using the SASB framework as a starting point.

The Sub-Investment Manager also utilises the NB ESG Quotient for corporate issuers. This scoring system includes an in-house governance assessment tool and an assessment of industry specific environmental and social factors. The ESG factors applied are sector-specific with customised sector weightings.

As noted above, the Sub-Investment Manager will ensure that securities representing at least 90% of the Net Asset Value of the Portfolio are covered by the NB ESG Quotient. The criteria for the NB ESG Quotient is determined by the security type, not the scope of the investment universe. Generally speaking, corporate securities (e.g. fixed and floating rate high yield and investment grade corporate bonds and loans, equity securities and convertible bonds) would be covered by the NB ESG Quotient in respect of the Portfolio. Security types which would typically not be covered by the NB ESG Quotient in the context of the Portfolio include, but are not limited to, government debt securities and cash/cash equivalents, and will represent at most 10% of the Portfolio's Net Asset Value.

Through ESG exclusionary steps, the Sub-Investment Manager will also exclude at least 20% of components of the investment universe which are rated the weakest in terms of the NB ESG Quotient.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

**Typical Investor Profile** The Portfolio may be suitable for investors who are prepared to accept the risks of the bond market together with higher levels of price volatility than generally associated with fixed income funds due to the Portfolio's investment policies or portfolio management techniques.

### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.20%	0.00%
B, C2, E	0.00%	1.20%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	0.80%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.60%	0.00%
M	2.00%	1.20%	0.60%
P	5.00%	0.57%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	0.90%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the "Administration Fees" heading in the "Fees and Expenses" section of the Prospectus.

### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 - 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C, C1</b>	1%	0%	0%	0%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

### Other important information for investors in Hong Kong

As the Portfolio has been authorised for public offer in Hong Kong, the Hong Kong Securities and Futures Commission ("HKSF") requires the Company to classify the Portfolio on the basis of its expected maximum net derivative exposure ("NDE"). The HKSF requires the NDE to be calculated in accordance with the HKSF's Code on Unit Trusts and Mutual Funds and the requirements and guidance issued by the HKSF, which may be updated from time to time. This requires the Company to convert all FDI acquired for investment purposes that would generate incremental leverage at the portfolio level of the Portfolio into their equivalent positions in the underlying assets. Applying these requirements, the Portfolio's NDE is expected to be less than 50% but the actual level may be higher than the expected level in exceptional circumstances, for example when there are sudden movements in markets and/or investment prices.

For the avoidance of doubt, complying with the HKSF's requirements to classify the Portfolio on the basis of its NDE does not amend the investment objectives or policies or otherwise impact the management of the Portfolio or its use of FDI, as the requirements are solely to measure the Portfolio's expected use of FDI, as described above, using the HKSF's methodology and disclose the results.

### Neuberger Berman European High Yield Bond Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Portfolio will not use FDI extensively or primarily for investment purposes.**

**Investment Objective** Seeks to maximise current income whilst preserving capital by investing in the European high yield fixed income market.

**Investment Approach** The Portfolio will aim to achieve its objective by investing primarily in corporate high yield fixed income securities, which are (i) denominated in a European currency or (ii) issued or guaranteed by companies of any industrial sector that are domiciled in, or exercise the main part of their economic activity in a European country that are listed, dealt or traded on Recognised Markets and comply with the terms of the Sustainable Exclusion Policy. The Portfolio will invest a majority of its Net Asset Value in securities denominated in Euro and / or GBP. The Portfolio's investments will be fully hedged into its Base Currency through the use of forward and future contracts as set out below in the "Instruments/Asset Classes" section. The Portfolio may also invest, on an ancillary basis, in unlisted money market instruments and equity securities issued by companies which have their head office or exercise an overriding part of their economic activity in Europe, and which may be denominated in a European currency.

The Sub-Investment Manager will take a disciplined approach to investing on behalf of the Portfolio by attempting to maintain a portfolio that is typically diversified across issuers, industry sectors and maturities. The Sub-Investment Manager will seek to select securities from the result of in-depth credit research, utilising proprietary analytical tools which seek to assess the strength of a company's credit profile, examples of which include but are not limited to:

- (i) their ability to pay principal and interest, their cash flow and balance sheet composition,
- (ii) their market position relative to competitors,
- (iii) the Sub-Investment Manager's assessment of Environmental, Social, and Governance (ESG) factors through the NB ESG Quotient as well as proactive engagement on ESG related topics.

The securities selected will depend on Sub-Investment Manager's analysis of the prevailing market conditions and considered in light of the investment objective of the Portfolio. In selecting securities for investment, the Sub-Investment Manager seeks to:

- capitalise on market opportunities in areas of the high yield market which the Sub-Investment Manager believes are undervalued;
- generate added value through (i) avoidance of credit deterioration, either as a result of a decline in credit rating based on internal research and/or external rating agencies or which occurs when the Sub-Investment Manager believes, based on research, that the fundamentals of a security are in decline and accordingly will dispose of or will not invest in such securities; (ii) relative value analysis (i.e. seeking to exploit perceived under or over valuation of assets (based on views of, including, but not exhaustive, ratings, corporate fundamentals and industry) carried out as part of the Sub-Investment Manager's proprietary research and (iii) industry and quality rotation by selling out of a security in one industry or credit tier and buying into another.

The Portfolio may opportunistically invest up to 10% of its Net Asset Value in participation interests in floating or adjustable rate senior secured loans, which are securitised and freely transferable, and which meet the regulatory criteria to be considered money market instruments.

The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes and because the Portfolio's investment policy restricts the extent to which the Portfolio's holdings may deviate from the Benchmark, as described above. This deviation may be significant.

<b>Benchmark</b>	<p>The ICE BofA European Currency Non-Financial High Yield 3% Constrained Index (Total Return, EUR) which measures the performance of non-financial below-investment grade corporate debt denominated in Euro and GBP, publicly issued in the eurobond, sterling domestic or euro domestic markets and caps exposure to any issuer at 3%.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>
<b>Base Currency</b>	Euro (EUR).
<b>Instruments / Asset Classes</b>	<p>The Portfolio will invest mainly in high yield fixed income securities. The Portfolio can invest in or be exposed to the following types of assets.</p> <p><b>Fixed Income Securities (Debt securities).</b> These securities may include:</p> <ul style="list-style-type: none"> <li>• Corporate bonds, debentures and notes on corporate bonds (both fixed and floating rate securities) such as loan participation notes;</li> <li>• Contingent convertible bonds, subject to a limit of up to 10% of the Portfolio's Net Asset Value;</li> <li>• Privately issued mortgage-backed securities, asset-backed securities, structured securities that derive interest and principal payments from specified assets or indices (including mortgage-backed securities such as pass-through certificates, collateralised mortgage obligations, and interest and principal only components of mortgage-backed securities);</li> <li>• Collateralised loan obligations, subject to a limit of up to 10% of the Portfolio's Net Asset Value; and</li> <li>• Payment-in-kind bonds (which are bonds that pay interest in the form of additional bonds of the same kind), deferred payment securities (securities which pay regular interest after a predetermined date), and zero coupon securities.</li> </ul> <p>High yield fixed income securities are medium or lower rated securities, generally those rated below investment grade (Baa3, BBB- or above) by one or more Recognised Agencies.</p> <p>The Portfolio may also invest in other debt securities including convertible notes, convertible bonds and equity securities (where the holding of equity securities has resulted from the conversion of convertible bonds) issued by European corporate and other corporate issuers and are listed, dealt or traded on Recognised Markets.</p> <p><b>Money Market Instruments.</b> The Portfolio may also invest in money market instruments including bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, participation interests in loans (which are securitised and freely transferable), cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.</p> <p><b>Equity Securities.</b> Equity securities (both common and preferred) issued by companies which have their head office or exercise an overriding part of their economic activity in Europe, and/or which may be denominated in a European currency.</p> <p><b>Financial Derivative Instruments ("FDIs").</b> Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement, the Portfolio may use the following FDI for hedging and/or efficient portfolio management:</p> <ul style="list-style-type: none"> <li>• Swaps may include currency swaps, credit default swaps, interest rate swaps,</li> </ul>

UCITS eligible index swaps and total return swaps to obtain exposure to the broad European high yield fixed income market pending investment in the securities described above and to hedge existing long positions. The maximum proportion of the Portfolio's Net Asset Value that can be subject to total return swaps is 10%. The expected proportion of the Portfolio's Net Asset Value that will be subject to total return swaps is 0%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;

- Future contracts based on interest rates or UCITS eligible bond indices may be used to hedge interest rate risk and existing long positions;
- Options on UCITS eligible bond index futures and UCITS eligible bond indices may be used to achieve a profit as well as to hedge existing long positions;
- Forward contracts on fixed income securities may be used to achieve a profit, through gaining exposure to an increase in the value of such securities as well as to hedge existing long positions; and
- Forward currency contracts may be used to achieve a profit through gaining exposure to an increase in the value of currencies, as well as to hedge existing long currency exposures.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed in this "*Instruments/Asset Classes*" section. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to add excess return. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities to add excess return. Any indices to which exposure is taken through FDI will be broad-based, UCITS-eligible indices which provide exposure to the performance of the types of assets in which the Portfolio may invest, as described in this "*Instruments/Asset Classes*" section. Details of such indices utilised by the Portfolio will be contained in the annual report of the Company.

The counterparties to OTC FDI entered into in respect of the Portfolio will be entities (which will not be related to the Manager or its delegates) with legal personality which may be located globally. They will be subject to ongoing supervision by a public authority, be rated at or in excess of the requirements of the Central Bank by a Recognised Rating Agency and have the necessary organisational structure and resources for the relevant type of transaction. The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

---

#### **Investment Restrictions**

- Under normal market conditions, it is the intention of the Sub-Investment Manager to invest at least 80% of the Portfolio's Net Asset Value in high yield fixed income securities which are unrated or rated below investment grade.
  - There are no restrictions on the average maturity of the Portfolio or the maturity of any single instrument. Maturities may vary widely depending on the Sub-Investment Manager's assessment of interest rate trends and other economic and market factors.
  - Any cash held by the Portfolio will be held solely as an ancillary liquid asset.
  - The Portfolio may not invest more than 10% of its Net Asset Value in equity securities.
  - The Portfolio's investments in participation interests in loans and in unlisted loan participation notes will not exceed 10% of its Net Asset Value.
-

- The maximum holding in a single issuer is 5% of the Portfolio's Net Asset Value.
- The Portfolio may invest up to 10% of its Net Asset Value in securities that are issued or guaranteed by a single sovereign issuer and that are below investment grade.
- The Portfolio will not utilise securities lending or margin lending.

---

## Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the "*Investment Risks*" section of the Prospectus. While investors should read and consider the entire "*Investment Risks*" section of the Prospectus, the risks summarised in the following section, namely, "*Market Risks: Risks relating to Debt Securities*" are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Sub-Investment Manager will seek to anticipate spread movements in response to changes in economic conditions, industry fundamentals, issuer specific financial performance and other issuer specific factors. Investment decisions will be based on analysis of historical spread relationships, break-even yield spread analysis and total return projections.
- The Sub-Investment Manager will use currency futures, currency swaps and forward currency contracts in order to hedge currency risk.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

---

## Environmental, Social and Governance ("ESG")

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

As noted above, the Sub-Investment Manager applies the Sustainable Exclusion Policy, when determining what investments to make for the Portfolio. Further details on this exclusion policy are set out in the "*Sustainable Investment Criteria*" section of the Prospectus.

ESG risks and opportunities are systematically considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager assesses securities in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

The Sub-Investment Manager applies (i) the Global Standards Policy; (ii) the Controversial Weapons Policy; (iii) the Thermal Coal Involvement Policy; and (iv) the Neuberger Berman Sustainable Exclusion Policy when determining what investments to make for the Portfolio. Further details on these screening/exclusion policies are set out in the "*Sustainable Investment Criteria*" section of the Prospectus.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

---

## Typical Investor Profile

The Portfolio may be suitable for investors with a medium to long-term horizon who are prepared to accept the risks of the bond market together with higher levels of price volatility than generally associated with fixed income funds due to the Portfolio's investment policies or portfolio management techniques.

---

**Fees and Expenses**

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.20%	0.00%
B, C2, E	0.00%	1.20%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	0.80%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.60%	0.00%
M	2.00%	1.20%	0.60%
P	5.00%	0.57%	0.00%

U	3.00%	0.90%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

**Contingent deferred sales charges**

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C, C1</b>	1%	0%	0%	0%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

**Other important information for investors in Hong Kong**

As the Portfolio has been authorised for public offer in Hong Kong, the Hong Kong Securities and Futures Commission (“HKSF”) requires the Company to classify the Portfolio on the basis of its expected maximum net derivative exposure (“NDE”). The HKSF requires the NDE to be calculated in accordance with the HKSF’s Code on Unit Trusts and Mutual Funds and the requirements and guidance issued by the HKSF, which may be updated from time to time. This requires the Company to convert all FDI acquired for investment purposes that would generate incremental leverage at the portfolio level of the Portfolio into their equivalent positions in the underlying assets. Applying these requirements, the Portfolio’s NDE is expected to be less than 50% but the actual level may be higher than the expected level in exceptional circumstances, for example when there are sudden movements in markets and/or investment prices.

For the avoidance of doubt, complying with the HKSF’s requirements to classify the Portfolio on the basis of its NDE does not amend the investment objectives or policies or otherwise impact the management of the Portfolio or its use of FDI, as the requirements are solely to measure the Portfolio’s expected use of FDI, as described above, using the HKSF’s methodology and disclose the results.

## Neuberger Berman Global High Yield SDG Engagement Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Portfolio will not use FDI extensively or primarily for investment purposes.**

### Investment Objective

Seeks to maximise current income whilst preserving capital by investing in securities in the global high yield fixed income market that produce investment returns and support better alignment with the United Nations Sustainable Development Goals by engaging with issuers in support of achieving the United Nations Sustainable Development Goals.

### Investment Approach

The Portfolio will aim to achieve its objective by investing primarily in:

- US dollar and non-U.S. dollar denominated high yield fixed income securities that are issued or guaranteed by corporate issuers of any industrial sector; and
- Short duration, high yield fixed income securities issued by governments and agencies globally that are primarily denominated in US Dollars located throughout the world that are listed, dealt or traded on Recognised Markets.

The Portfolio promotes environmental and social characteristics, as described in greater detail in the SFDR Annex, whilst contributing towards the achievement of the SDGs by aiming to engage directly with 100% of corporate issuers, primarily through in-person meetings and calls, setting key performance indicators (“KPIs”) aligned to the SDGs which relate to the issuers’ products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. Engagement with corporate issuers will take place within 12 months of purchasing the securities issued by the corporate issuer.

The Sub-Investment Manager will prioritise investment in corporate issuers that have the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs. The corporate issuer’s progress relative to the KPIs set is evaluated by the Sub-Investment Manager quarterly. This direct engagement with investee companies is an essential part of the investment process and the Portfolio’s contribution towards the achievement of the SDGs.

Following the application of the exclusions described in the “*Environmental, Social and Governance*” section, the Sub-Investment Manager will then assess potential investments, as follows:

- 1) The Sub-Investment Manager systematically considers and evaluates ESG characteristics, as an important component of its credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient on a continuous basis, as part of the Portfolio construction and investment management process. The NB ESG Quotient assigns weightings to issuers (relative to their peer group) for each of the environmental and social characteristics (as described in the SFDR Annex) to derive the issuer’s NB ESG Quotient rating. The Sub-Investment Manager prioritises investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating over those issued by issuers with a poor NB ESG Quotient rating, especially where such an NB ESG Quotient rating is not being addressed by an issuer. Such securities may be excluded from the Portfolio.
- 2) Creditworthiness is assessed by fundamental analysis aimed at assessing the issuer’s financial performance, such as revenue/earnings before interest, tax, depreciation, and amortisation (“**EBITDA**”) growth, cash flow growth, capital expenditures, leverage trends and liquidity profile, utilising proprietary analytical tools. This analysis seeks to assess the strength of a company’s credit profile, including its ability to pay principal and interest, its cash flow and balance sheet composition and its market position relative to competitors.
- 3) The Sub-Investment Manager will use an in-house tool to screen for the likelihood of achieving success in engagement with an issuer prior to investment (the “**Engagement Potential Indicator**”). The Engagement Potential Indicator, on a scale of 1-5, provides a systematic evaluation of an issuer’s willingness and ability to engage with the Sub-Investment Manager on the SDGs. For example, a company determined to be unwilling or unable to engage would receive an Engagement Potential Indicator of “1”, whereas a company willing to engage on becoming a leader in contributing to the SDGs would receive an Engagement Potential Indicator of “5”. The Sub-Investment Manager does

not intend to invest in companies with an Engagement Potential Indicator rating of below “2”. The Engagement Potential Indicator considers a diverse set of factors including the relevance of the SDGs to an issuer’s business operations, an issuer’s disclosure practices and the Sub-Investment Manager’s relationship with the issuer, in addition to the financial constraints of the issuers.

- 4) The Sub-Investment Manager then selects investments that seek to maximise current income and preserve capital and progress towards engagement objectives aligned with the SDGs.

In seeking to maximise income and preserve capital, the Sub-Investment Manager may seek to (where applicable):

- capitalise on market opportunities in areas of the high yield market which the Sub-Investment Manager believes are undervalued; and/or
- generate added value through: (i) avoidance of credit deterioration, either as a result of a decline in credit rating based on internal research and/or external rating agencies or which occurs when the Sub-Investment Manager believes, based on research, that the fundamentals of a security are in decline and accordingly will dispose of or will not invest in such securities; (ii) relative value analysis (i.e. seeking to exploit perceived under or over valuation of assets (based on views of, including, but not exhaustive, ratings, corporate fundamentals and industry) carried out as part of the Sub-Investment Manager’s proprietary research and (iii) industry and quality rotation by selling out of a security in one industry or credit tier and buying into another.

The Sub-Investment Manager will seek to make progress towards engagement objectives aligned with the SDGs through active and collaborative engagement with issuers, using both in person meetings and correspondence;

- 5) The Sub-Investment Manager uses an internal NB engagement tracker to monitor and track engagements at the issuer level and to measure issuers’ progress with respect to their engagement objectives over time. Failure by issuers to engage with the Sub-Investment Manager or a lack of progress towards their engagement objectives over time may lead to the Portfolio divesting from issuers’ securities; and
- 6) Periodically, the Sub-Investment Manager will report publicly on engagement efforts and progress towards engagement objectives.

The Portfolio will invest primarily in securities denominated in the currencies included in the Benchmark.

The Portfolio’s investments will be fully hedged into its Base Currency through the use of forward and future contracts as set out below in the “*Instruments/Asset Classes*” section.

The Portfolio may also invest, on an ancillary basis, in unlisted money market instruments issued by companies located throughout the world.

The Sub-Investment Manager will take a disciplined approach to investing on behalf of the Portfolio by attempting to maintain a portfolio that is typically diversified across issuers, industry sectors and maturities. The securities selected will depend on the Sub-Investment Manager’s analysis of the prevailing market conditions and considered in light of the investment objective of the Portfolio.

In addition, the Portfolio may also invest in securities of companies located in and governments of Emerging Market Countries, which may involve additional risk, relative to investment in more developed economies.

The Portfolio may opportunistically invest up to 10% of its Net Asset Value in participation interests in floating or adjustable rate senior secured loans, which are securitised and freely transferable, and which meet the regulatory criteria to be considered money market instruments.

The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes and because the Portfolio’s investment policy restricts the extent to which the Portfolio’s holdings may deviate from the Benchmark, as described above. This deviation may be significant.

<b>Benchmark</b>	<p>The ICE BofA Global High Yield Constrained Index (Total Return, Hedged, USD) tracks the performance of USD, CAD, GBP and EUR-denominated below investment grade corporate debt publicly issued in the major domestic or Eurobond markets and limits exposure to each issuer included in the index to a maximum of 2% of the index.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>
<b>Base Currency</b>	U.S. Dollars (USD).
<b>Instruments / Asset Classes</b>	<p>The Portfolio will invest mainly in high yield fixed income securities, including:</p> <p><b>Fixed Income Securities (Debt securities).</b> These securities may include:</p> <ul style="list-style-type: none"> <li>• Both fixed and floating rate securities;</li> <li>• Corporate bonds, bonds with warrants, bonds resulting from the restructuring of syndicated loans or bank loans (e.g. “Brady” bonds), subordinated bonds, debentures and notes (including freely transferable and unleveraged structured notes and freely transferable promissory notes), asset-backed securities;</li> <li>• Contingent convertible bonds, where received as part of a restructuring of an issuer and subject to a limit of up to 10% of the Portfolio’s Net Asset Value;</li> <li>• Debt securities issued by governments and commercial banks;</li> <li>• Deferred payment securities (securities which pay regular interest after a predetermined date), zero coupon securities that are rated below investment-grade (often referred to as “junk bonds”), payment-in-kind bonds (which are bonds that pay interest in the form of additional bonds of the same kind); and</li> <li>• Collateralised loan obligations, subject to a limit of up to 10% of the Portfolio’s Net Asset Value.</li> </ul> <p><b>Money Market Instruments.</b> The Portfolio may also invest on an ancillary basis in money market instruments including bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, participation interests in loans (which are securitised and freely transferable), cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.</p> <p><b>Financial Derivative Instruments (“FDIs”)</b> subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement, the Portfolio may use the following FDI for hedging and/or efficient portfolio management:</p> <ul style="list-style-type: none"> <li>• Swaps may include currency swaps, credit default swaps, interest rate swaps, UCITS eligible index swaps and total return swaps to obtain exposure to the broad short duration, high yield fixed income market pending investment in the securities described above and to hedge existing long positions. The maximum proportion of the Portfolio’s Net Asset Value that can be subject to total return swaps is 15%. The expected proportion of the Portfolio’s Net Asset Value that will be subject to total return swaps is 2%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;</li> <li>• Future contracts based on interest rates, fixed income securities or UCITS eligible bond indices may be used to hedge interest rate risk and existing long positions;</li> <li>• Options on UCITS eligible bond index futures and UCITS eligible bond indices may be used to achieve a profit as well as to hedge existing long positions;</li> <li>• Warrants and rights on fixed income securities, which may be used to achieve a profit through gaining exposure to an increase in the value of such securities as well as to hedge existing long positions;</li> <li>• Forward contracts on fixed income securities may be used to achieve a profit, through gaining exposure to an increase in the value of such securities as well as to hedge</li> </ul>

existing long positions; and

- Forward and non-deliverable forward currency contracts may be used to achieve a profit through gaining exposure to an increase in the value of currencies, as well as to hedge existing long currency exposures.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed in this “*Instruments/Asset Classes*” section. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to add excess return. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities to add excess return. Any indices to which exposure is taken through FDI will be broad-based, UCITS-eligible indices which provide exposure to the performance of the types of assets in which the Portfolio may invest, as described in this “*Instruments/Asset Classes*” section. Details of such indices utilised by the Portfolio will be contained in the annual report of the Company.

The counterparties to OTC FDI entered into in respect of the Portfolio will be entities (which will not be related to the Sub-Investment Manager or its delegates) with legal personality which may be located globally. They will be subject to ongoing supervision by a public authority, be rated at or in excess of the requirements of the Central Bank by a Recognised Rating Agency and have the necessary organisational structure and resources for the relevant type of transaction.

The Portfolio may be leveraged as a result of its investments in FDI, but such leverage will not exceed 100% of the Portfolio’s Net Asset Value at any time.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

#### Investment Restrictions

- Under normal market conditions, it is the intention of the Sub-Investment Manager to invest at least 80% of the Portfolio’s Net Asset Value in high yield fixed income securities. High yield fixed income securities are medium or lower rated securities, generally those rated below investment grade (Baa3, BBB- or above) by one or more Recognised Rating Agency, sometimes referred to as “junk bonds”.
- There are no restrictions on the average maturity of the Portfolio or the maturity of any single instrument. Maturities may vary widely depending on the Sub-Investment Manager’s assessment of interest rate trends and other economic and market factors.
- Any cash held by the Portfolio will be held solely as an ancillary liquid asset.
- The Portfolio may not hold more than 10% of its Net Asset Value in equity securities received as part of a restructuring of an issuer.
- The Portfolio may invest up to 10% of its Net Asset Value in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.
- The Portfolio may invest in excess of 20% of its Net Asset Value in securities of companies located in and governments of Emerging Market Countries.
- The Portfolio will not utilise securities lending or margin lending.
- The maximum holding in a single issuer is 5% of the Portfolio’s Net Asset Value.

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the risks summarised in the following sections, namely, “*Market Risks: Risks relating to Debt Securities*” and “*Market Risks: Risks relating to Emerging Market Countries*” are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.

- The Sub-Investment Manager will seek to anticipate spread movements in response to changes in economic conditions, industry fundamentals, issuer specific financial performance and other issuer specific factors. Investment decisions will be based on analysis of historical spread relationships, break-even yield spread analysis and total return projections.
- The Sub-Investment Manager will use forward currency contracts in order to hedge currency risk.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

### Environmental, Social and Governance ("ESG")

The Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

The Sub-Investment Manager applies the: (i) Global Standards Policy; (ii) Controversial Weapons Policy; and (iii) the Thermal Coal Involvement Policy, when determining what investments to make for the Portfolio. Further details on these screening/exclusion policies are set out in the "*Sustainable Investment Criteria*" section of the Prospectus.

The Sub-Investment Manager will also manage the Portfolio in accordance with the ESG Policy on a continuous basis. The Sub-Investment Manager has fully integrated the ESG Policy into its overall investment process, in particular, the portfolio construction process. A summary of the ESG Policy is detailed in Annex VI to the Prospectus and is available on the Neuberger Berman website: [www.nb.com/esg](http://www.nb.com/esg).

Additionally, the Portfolio is prohibited from purchasing the securities of issuers that are involved in tobacco production such as cigars, cigarettes, e-cigarettes, smokeless tobacco, dissolvable and chewing tobacco. This also includes issuers that grow or process raw tobacco leaves.

In addition, as described in the "*Investment Approach*" section, the Portfolio also contributes towards the achievement of the SDGs by aiming to engage directly with 100% of corporate issuers within 12 months of purchase and setting KPIs aligned to the SDGs which relate to the issuers' products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

### Typical Investor Profile

The Portfolio may be suitable for investors with a medium to long term horizon who are prepared to accept the risks of the bond market together with higher levels of price volatility than generally associated with fixed income funds due to the Portfolio's investment policies or portfolio management techniques.

### Fees and Expenses

The Manager may be entitled to receive a performance fee payable out of the Portfolio's assets in respect of each PF Class in the Portfolio.

### Definitions

<b>Benchmark</b>	ICE BofA Global High Yield Constrained Index in relevant class currency (as detailed below)
<b>Calculation Period</b>	<p>The Calculation Period shall normally run from 1 January to 31 December in each year except that:</p> <ul style="list-style-type: none"> <li>• in the case of the initial issue of Shares in each PF Class, the first Calculation Period will run from the date of issue to 31 December;</li> <li>• in the case of the termination of a PF Class, the Calculation Period will terminate on the date of the termination; and</li> <li>• in the case of the termination of the Management Agreement in any year, the Calculation Period will terminate on the date of the termination.</li> </ul>

	The first value used in determining the first Performance Fee for a PF Class shall be the Initial Offer Price.
<b>Crystallisation</b>	The point at which any performance fee becomes payable to the Manager. Crystallisation will occur either at the end of the Calculation Period or on a Dealing Day on which a Shareholder redeems or converts all or part of its Shareholding.
<b>Outperformance</b>	The excess performance of the Net Asset Value per Share over the performance of the Benchmark during the Calculation Period.

### Methodology

For each Calculation Period, a Performance Fee in respect of each PF Class in issue becomes due in respect of any Outperformance, i.e. the excess performance of the Net Asset Value per Share (net of all costs before the deduction of any accrued Performance Fee, provided that in doing so it is in the Shareholder's best interest) over the performance of the Benchmark applicable to that particular PF Class during the Calculation Period. The Percentage Fee will be calculated on each Dealing Day and will be equal to 20% of the Outperformance applicable to that particular PF Class over the same period.

In all cases the Net Asset Value per Share used in the calculation of the Performance Fee is unswung, i.e. it does not include any adjustment for swing pricing.

In the event that the performance of a PF Class over a Calculation Period is less than that of the Benchmark, no Performance Fee shall be payable in respect of that PF Class until such cumulative underperformance relative to its Benchmark has been recovered.

In the event that the PF Class has achieved Outperformance over a Calculation Period, a Performance Fee shall be payable in respect of that PF Class. Upon payment the Benchmark will be reset, this process ensures the Net Asset Value per Share and the Benchmark start from the same place at the start of the calculation period. Accordingly for the next Calculation Period the commencing Benchmark value will equal the Net Asset Value in respect of the PF Class on which the performance fee was paid i.e. if the Net Asset Value were to equal 110 the commencing Benchmark Value would also equal 110.

### Benchmark Indices

Classes	Index	Code
USD PF Classes	ICE BofA Global High Yield Constrained Index	HW0C select currency USD
EUR Hedged PF Classes	ICE BofA Global High Yield Constrained Index - EUR Hedged	HW0C select currency EUR
GBP Hedged PF Classes	ICE BofA Global High Yield Constrained Index - GBP Hedged	HW0C select currency GBP

Shareholders should note that, as the Performance Fee is payable on the outperformance over the Benchmark, they may be charged a Performance Fee where the Net Asset Value of their Shares has declined but to a lesser extent than the Benchmark.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level and as no series accounting is applied in respect of the Performance Fee, they may be charged a Performance Fee even where the Net Asset Value of their Shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of a Calculation Period.

The Performance Fee will be accrued in the Net Asset Value on each Dealing Day and will normally be payable to the Manager in arrears within 30 Business Days of the end of each Calculation Period. However, in the case of Shares redeemed during a Calculation Period, the accrued Performance Fee in respect of those Shares will be payable to the Manager within 30 Business Days of the date of redemption.

Crystallised Performance Fees shall remain in the relevant PF Class (but shall not participate in subsequent gains and losses of the relevant Class) until paid to the Manager and shall not be used or made available to satisfy redemptions or pay any fees and expenses of the relevant PF Class.

The Depository shall verify the calculation of the performance fee and ensure that it is not open to the possibility of manipulation.

The Directors may, with the consent of the Manager, reduce the Performance Fee payable by any PF Class. Performance Fees are payable on realised and unrealised capital gains, which for the avoidance of doubt includes investment income, taking into account realised and unrealised losses at the end of the Calculation Period. Consequently, Performance Fees may be paid on unrealised gains which may subsequently never be realised.

## WORKED EXAMPLES

Examples 1 to 3 show how the Performance Fee is calculated, accrued and crystallised. All valuation points fall within one Calculation Period.

Valuation point	1	2	3	4
NAV of PF Class Shares	US\$10.000	US\$10.100	US\$9.900	US\$10.200
Benchmark	US\$10.000	US\$10.050	US\$10.100	US\$10.150

### Example 1

Investor A acquires PF Class Shares at valuation point 1 for US\$10.000 per Share

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$20\% \times (\text{US}\$10.100 - \text{US}\$10.050) = \text{US}\$0.01$	Accrued in NAV
Valuation point 3		None: NAV < Benchmark	
Valuation point 4		$20\% \times (\text{US}\$10.200 - \text{US}\$10.150) = \text{US}\$0.01$	Accrued in NAV

### Example 2

Investor B acquires PF Class Shares at valuation point 3 for US\$9.900 per Share

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1			
Valuation point 2			
Valuation point 3	US\$9.900		
Valuation point 4		$20\% \times (\text{US}\$10.200 - \text{US}\$10.150) = \text{US}\$0.01$	Accrued in NAV

### Example 3

Investor C acquires PF Class Shares at valuation point 1 for US\$10.000 per Share and redeems at valuation point 4

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$20\% \times (\text{US}\$10.100 - \text{US}\$10.050) = \text{US}\$0.01$	Accrued in NAV
Valuation point 3		None: NAV < Benchmark	
Valuation point 4		$20\% \times (\text{US}\$10.200 - \text{US}\$10.150) = \text{US}\$0.01$	US\$0.01

## SCENARIOS<sup>1</sup>

All scenarios show the value of US\$100K invested in Shares in a PF Class

<sup>1</sup> Investors should note that these scenarios are purely intended to be illustrative of the impact of different investment performance and have been simplified in some non-material respects to aid this understanding. For example, management fees and other expenses are in reality accrued on a daily basis but their calculation is presented in a simplified manner here for ease of review.

**Scenario 1** illustrates the effect of the NAV performance being 5% per annum and the Benchmark return being 3% in three consecutive years

**Scenario 2** illustrates the effect of the NAV growth being 6%, -4%, and 6% and the Benchmark return being 3%, -2% and 3% in three consecutive years

**Scenario 3** illustrates the effect of the NAV growth at 8%, 0% and -1% and the Benchmark return being 4%, 0% and -5% in three consecutive years

### Scenario 1

	Period One	Period Two	Period Three
	5% growth	5% growth	5% growth
<b>Gross Value of PF Class Shares at year end</b>	US\$105,000	US\$109,565	US\$114,329
<b>Management Fee 0.10%</b>	US\$105	US\$110	US\$114
<b>Other expenses 0.20%</b>	US\$210	US\$219	US\$229
<b>Initial Net Asset Value of PF Class Shares at year end</b>	US\$104,685	US\$109,237	US\$113,986
<b>Benchmark</b>	US\$103,000	US\$107,4782	US\$112,1522

<b>Final Net Asset Value of PF Class Shares at year end</b>	US\$106,941	US\$106,620	US\$104,508

#### Performance fee share classes

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
Z (PF)	0.00%	0.10%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Non-Performance fee share classes

The following Classes will not be subject to the Performance Fee described above and will be subject to the following fees.

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.20%	0.00%
B, C2, E	0.00%	1.20%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	0.80%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.60%	0.00%
M	2.00%	1.20%	0.60%
P	5.00%	0.57%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	0.90%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 - 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C, C1</b>	1%	0%	0%	0%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus.

**SFDR Annexes**

- 1. NEUBERGER BERMAN HIGH YIELD BOND FUND**
- 2. NEUBERGER BERMAN SHORT DURATION HIGH YIELD SDG ENGAGEMENT FUND**
- 3. NEUBERGER BERMAN EUROPEAN HIGH YIELD BOND FUND**
- 4. NEUBERGER BERMAN GLOBAL HIGH YIELD SDG ENGAGEMENT FUND**

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman High Yield Bond Fund (the “Portfolio”)  
**Legal entity identifier:** 549300IJY8N43QRUU802

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

**The EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

<p><input checked="" type="radio"/> <input type="radio"/> <b>Yes</b></p> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective</b>: ___%</p> <p style="margin-left: 40px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 40px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective</b>: ___%</p>	<p><input checked="" type="radio"/> <input type="radio"/> <b>No</b></p> <p><input type="checkbox"/> It promotes <b>Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment it will have a minimum proportion of ___% of sustainable investments</p> <p style="margin-left: 40px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 40px;"><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 40px;"><input type="checkbox"/> with a social objective</p> <p><input checked="" type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>
---	--

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, are more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with corporate issuers, as discussed in more detail below. The success of the Sub-Investment Manager’s constructive engagement efforts with issuers will depend on each of the issuer’s receptiveness and responsiveness to such engagement.

II. Climate Value-at-Risk:

Climate Value-at-Risk (“CVaR”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement. Due to data limitations, CVaR is not

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

applied across all issuers held by the Portfolio and is instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion policies applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

N/A – the Portfolio does not commit to holding sustainable investments.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio does not commit to holding sustainable investments.

- — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

- — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – This Portfolio does not commit to holding Taxonomy-aligned investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager utilises third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager’s subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The investment objective of the Portfolio is to achieve an attractive level of total return (income plus capital appreciation) from the high yield fixed income market. The Portfolio will aim to achieve its objective by investing primarily in high yield fixed income securities issued by US and foreign corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US, and high yield fixed income securities issued by governments and agencies in the US that are primarily denominated in US Dollars, that are listed, dealt or traded on Recognised Markets (as depicted in Annex I of the prospectus) without any particular focus on any one industrial sector.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, credit worthiness is complemented by fundamental analysis aimed at assessing the issuer’s financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation (“**EBITDA**”) growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

- I. Integrating proprietary ESG analysis:  
The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is a key component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

- II. Engagement:

The Sub-Investment Manager engages directly with management teams of corporate issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with corporate issuers as an important part of its investment process (including the investment selection process). Corporate issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with corporate issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately.

The Sub-Investment Manager firmly believes this consistent engagement with corporate issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

- III. ESG sectoral exclusion policies:  
To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of corporate issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee corporate issuers. The Sub-Investment Manager views this direct engagement with corporate issuers, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a corporate issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time. As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management and/or hedging, it will not use derivatives to promote environmental or social characteristics.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

**Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

Yes:

In fossil gas

In nuclear energy

No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of socially sustainable investments?**

N/A - the Portfolio does not commit to holding sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A - The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

● **How does the designated index differ from a relevant broad market index?**

N/A

● **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/gb/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman Short Duration High Yield SDG Engagement Fund (the “**Portfolio**”)  
**Legal entity identifier:** 5493009EN8Z7034TFP15

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective**: \_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective**: \_\_\_%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, **it will have a minimum proportion of 10% of sustainable investments**

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

### What environmental and/or social characteristics are promoted by this financial product?

The Portfolio seeks to promote the achievement of the SDGs by engaging with at least 90% of corporate issuers, on incremental actions that they can take within their products, services, operations or processes which are aligned with these goals (or where there is potential for increased alignment with these goals, following engagement with these companies). Engagement with corporate issuers will take place within 12 months of purchasing the securities issued by the corporate issuer.

In addition, as part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager will promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions.<sup>1</sup>

- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

The Sub-Investment Manager aims to maintain an average ESG rating for the Portfolio that is above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which will be assessed based on third party ESG scores from an established external provider. The Portfolio is actively managed, the ICE BofA U.S. High Yield Index is used exclusively for ESG rating comparison purposes and carbon intensity reduction comparison purposes only.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer’s owned or controlled sources (such as emissions created directly by the issuer’s business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer’s value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

a poor NB ESG Quotient rating is not being addressed by an issuer, will be excluded from the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with 90% of corporate issuers, within 12 months of purchase, as discussed in more detail below. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

II. Engagement reporting:

The Sub-Investment Manager will report on its engagement as part of periodic reporting going forward.

III. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement. Due to data limitations, CVaR is not applied across all issuers held by the Portfolio and is instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

IV. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Portfolio also applies the Neuberger Berman Sustainable Exclusion Policy and the Portfolio excludes issuers that are involved in controversial activities and behaviours, such as fur manufacturers, gambling or nuclear power. Further details on these ESG exclusion policies are set out in the "Sustainable Investment Criteria" section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) engagement reporting; (iii) the CVaR; and (iv) the adherence to the ESG exclusion policies applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold at least 10% sustainable investments which will aim to promote the environmental & social characteristics listed above.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB's sustainable investment framework. This framework includes an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described

below, and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Sub-Investment Manager utilises multiple datapoints that measure the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screens companies for controversies, significant harm and violations of minimum safeguards. If the companies pass this screen, the Sub-Investment Manager then proceeds to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the SDGs.

Sustainable investments are more likely to have product/service revenue aligned with the SDGs.

While the sustainable investments may have a social or an environmental objective, the Sub-Investment Manager does not commit the Portfolio to holding sustainable investments that qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Sub-Investment Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "*How have the indicators for adverse impacts on sustainability factors been taken into account?*" below) and violations of minimum safeguards (with respect to which see "*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*" below). The Sub-Investment Manager also applies the ESG exclusion policies referenced above.

The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

The Sub-Investment Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "**PAIs**").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view) in respect of the sustainable investments of the Portfolio, and may evolve with improving data quality and availability. The Sub-Investment Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fall below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the NB ESG exclusion policies detailed above, which includes consideration of several of the PAIs.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio does not commit to holding Taxonomy-aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager utilises third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;

- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

### What investment strategy does this financial product follow?

The investment objective of the Portfolio is to generate high current income by investing in short-duration high yield fixed income securities that comply with the terms of the Neuberger Berman Sustainable Exclusion Policy and seeks to produce investment returns, support better-functioning capital markets and have a positive social and environmental impact.

The Portfolio will aim to achieve its objective by investing primarily in:

- Short duration, high yield fixed income securities issued by US and non-U.S. corporations, which, respectively, have their head office or exercise an overriding part of their economic activity in the US; and
- Short duration, high yield fixed income securities issued by governments and agencies in the US that are primarily denominated in US Dollars,

that comply with the terms of the Sustainable Exclusion Policy and are listed, dealt or traded on Recognised Markets (as depicted in Annex I of the prospectus) without any particular focus on any one industrial sector.

The Portfolio:

- Seeks to promote the achievement of the SDGs by engaging with at least 90% of corporate issuers, within 12 months of purchase, on incremental actions that they can take within their products, services, operations or processes which are aligned with these goals (or where there is potential for increased alignment with these goals, following engagement with these corporate issuers).
- Maintains an average ESG rating for the Portfolio that is above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which will be assessed based on third party ESG scores from an established external provider.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager intends to reduce the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions, equating to a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Further details on Neuberger Berman's commitment to the Net Zero Asset Managers Initiative are contained in the "Sustainable Investment Criteria" section of the Prospectus.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, will be excluded from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, credit worthiness is complemented by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

### The investment strategy guides

investment decisions based on factors such as investment objectives and risk tolerance.

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is a key component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, will be excluded from the Portfolio.

II. Engagement:

The Sub-Investment Manager engages directly with management teams of corporate issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with corporate issuers, as an important part of its investment process (including the investment selection process). Corporate issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with corporate issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately.

The Sub-Investment Manager firmly believes this consistent engagement with corporate issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Portfolio:

- Seeks to promote the achievement of the SDGs by engaging with at least 90% of corporate issuers, on incremental actions that they can take within their products, services, operations or processes which are aligned with these goals (or where there is potential for increased alignment with these goals, following engagement with these corporate issuers). Engagement with corporate issuers will take place within 12 months of purchasing the securities issued by the corporate issuer.
- Maintains an average ESG rating for the Portfolio that is above that of the broad U.S. high yield market, as represented by the ICE BofA U.S. High Yield Index, which will be assessed based on third party ESG scores from an established external provider.

The Sub-Investment Manager will use an in-house tool to screen for the likelihood of achieving success in engagement with an issuer prior to investment (the "**Engagement**

**Potential Indicator**). The Engagement Potential Indicator, on a scale of 1-5, provides a systematic evaluation of an issuer's willingness and ability to engage with the Sub-Investment Manager on the SDGs. For example, an issuer determined to be unwilling or unable to engage would receive an Engagement Potential Indicator of "1", whereas an issuer willing to engage on becoming a leader in contributing to the SDGs would receive an Engagement Potential Indicator of "5". The Sub-Investment Manager will prioritise investments in issuers with an Engagement Potential Indicator rating between "2" and "5". The Engagement Potential Indicator considers a diverse set of factors including the relevance of the SDGs to an issuer's business operations, an issuer's disclosure practices and the Sub-Investment Manager's relationship with the issuer, in addition to the financial constraints of the issuers.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

#### ● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Investment Manager will reduce the investment universe by 20% through the application of ESG exclusions, as detailed above, and ESG analysis.

#### ● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of corporate issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee corporate issuers. The Sub-Investment Manager views this direct engagement with corporate issuers as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a corporate issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding a minimum of 10% sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The “Other” section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the “Other” section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio’s mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

### ● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves..

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>2</sup>**

- Yes:
- In fossil gas       In nuclear energy
- No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

While the Portfolio may invest in sustainable investments with an environmental objective, such sustainable investments may not be in Taxonomy-aligned investments as they may not satisfy the criteria for same.

● **What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

● **What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

● **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio does not use a benchmark for performance comparison purposes or as a universe for selection. However, it does use a benchmark for ESG rating comparison purposes and carbon intensity purposes only and this benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

● **How does the designated index differ from a relevant broad market index?**

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

## SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman European High Yield Bond Fund (the “Portfolio”)  
**Legal entity identifier:** 549300Z7RL5FC5H5DB41

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It will make a minimum of **sustainable investments with a social objective:** \_\_\_%

It promotes E/S characteristics, but **will not make any sustainable investments**

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, are more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with corporate issuers, as discussed in more detail below. The success of the Sub-Investment Manager’s constructive engagement efforts with issuers will depend on each of the issuer’s receptiveness and responsiveness to such engagement.

II. Climate Value-at-Risk:

Climate Value-at-Risk (“CVaR”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement. Due to data limitations, CVaR is not

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

applied across all issuers held by the Portfolio and is instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy, the Neuberger Berman Thermal Coal Involvement Policy and the Neuberger Berman Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation.

Furthermore, investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards

Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion policies applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio’s mandatory periodic report (as per the requirements of Article 11 of SFDR).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

— — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio does not commit to holding Taxonomy-aligned investments.

#### Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager utilises third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager’s subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

#### What investment strategy does this financial product follow?

The investment objective of the Portfolio is to maximise current income whilst preserving capital by investing in the European high yield fixed income market. The Portfolio will aim to achieve its objective by investing primarily in corporate high yield fixed income securities, which are (i) denominated in a European currency or (ii) issued or guaranteed by companies of any industrial sector that are domiciled in or exercise the main part of their economic activity in a European country that are listed, dealt or traded on Recognised Markets (as depicted in Annex I of the prospectus).

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, credit worthiness is complemented by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is a key component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

II. Engagement:

The Sub-Investment Manager engages directly with management teams of corporate issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with corporate issuers, as an important part of its investment process (including the investment selection process). Corporate issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with corporate issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately.

The Sub-Investment Manager firmly believes this consistent engagement with corporate issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of corporate issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee corporate issuers. The Sub-Investment Manager views this direct engagement with corporate issuers, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a corporate issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

### What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The “Other” section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the “Other” section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio’s mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management and/or hedging, it will not use derivatives to promote environmental or social characteristics.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

Yes:

In fossil gas

In nuclear energy

No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A - the Portfolio does not commit to holding Taxonomy-aligned investments.

● **What is the minimum share of socially sustainable investments?**

N/A – the Portfolio does not commit to holding sustainable investments.

● **What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics. The above steps ensure that robust environmental and social safeguards are in place.

● **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A - The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

● **How does the designated index differ from a relevant broad market index?**

N/A

● **Where can the methodology used for the calculation of the designated index be found?**

N/A

● **Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

More product-specific information can be found on the website:

<https://www.nb.com/en/gb/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

## SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman Global High Yield SDG Engagement Fund (the “Portfolio”)  
**Legal entity identifier:** 549300YE6BLJU5JCDI13

## Environmental and/or social characteristics

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### What environmental and/or social characteristics are promoted by this financial product?

The Portfolio will promote the SDGs by aiming to engage directly with 100% of the corporate issuers. Engagement with corporate issuers will take place within 12 months of purchasing the securities issued by the corporate issuer.

The Sub-Investment Manager will set key performance indicators (“**KPIs**”) for corporate issuers that are aligned to the SDGs which relate to the issuers’ products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. The Sub-Investment Manager will prioritise investment in corporate issuers that have the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs.

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; responsible raw material sourcing; recycling practices & trends; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to healthcare; access to medicines; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and quality of care & patient satisfaction.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, are more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with 100% of the corporate issuers. The success of the Sub-investment Manager’s constructive engagement efforts with issuers will depend on each of the issuer’s receptiveness and responsiveness to such engagement. Engagement with corporate issuers will take place within 12 months of purchasing the securities issued by the corporate issuer.

II. Engagement reporting:

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-Investment Manager will report on its engagement as part of periodic reporting going forward.

III. Climate Value-at-Risk:

Climate Value-at-Risk (“**CVaR**”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement. Due to data limitations, CVaR is not applied across all issuers held by the Portfolio and is instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

IV. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Portfolio is prohibited from purchasing the securities of issuers that are involved in tobacco production such as cigars, cigarettes, e-cigarettes, smokeless tobacco, dissolvable and chewing tobacco. This also includes issuers that grow or process raw tobacco leaves. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) engagement reporting; (iii) the CVaR; and (iv) the adherence to the ESG exclusion policies applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio’s mandatory periodic report (as per the requirements of Article 11 of SFDR).

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold at least 10% sustainable investments which will aim to promote the environmental & social characteristics listed above.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB’s sustainable investment framework. This framework includes an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of an issuers’ overall governance score to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Sub-Investment Manager utilises multiple datapoints that measure the alignment of a company’s economic activity with environmental or social characteristics.

The Sub-Investment Manager screens companies for controversies, significant harm and violations of minimum safeguards. If the companies pass this screen, the Sub-Investment

Manager then proceeds to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the SDGs.

Sustainable investments are more likely to have product/service revenue aligned with the SDGs.

While the sustainable investments may have a social or an environmental objective, the Sub-Investment Manager does not commit the Portfolio to holding sustainable investments that qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Sub-Investment Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "*How have the indicators for adverse impacts on sustainability factors been taken into account?*" below) and violations of minimum safeguards (with respect to which see "*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*" below). The Sub-Investment Manager also applies the ESG exclusion policies referenced above.

The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

— — — ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

The Sub-Investment Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "**PAIs**").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view) in respect of the sustainable investments of the Portfolio, and may evolve with improving data quality and availability. The Sub-Investment Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Stewardship and/or setting engagement objectives with companies which fall below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the NB ESG exclusion policies detailed above, which includes consideration of several of the PAIs.

--- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio does not commit to holding Taxonomy-aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager utilises third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager’s subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

### **What investment strategy does this financial product follow?**

The investment objective of the Portfolio is to seek to maximise current income whilst preserving capital by investing in securities in the global high yield fixed income market that produce investment returns and support better alignment with the SDGs by engaging with issuers in support of achieving the SDGs. The Portfolio will aim to achieve its objective by investing primarily in US dollar and non-U.S. dollar denominated high yield fixed income securities that are issued or guaranteed by corporate issuers of any industrial sector, and short duration, high yield fixed income securities issued by governments and agencies globally that are primarily denominated in US Dollars located throughout the world that are listed, dealt or traded on Recognised Markets (as depicted in Annex I of the prospectus).

The Portfolio promotes environmental and social characteristics, by contributing towards the achievement of the SDGs by aiming to engage directly with 100% of the corporate issuers, primarily through in-person meetings and calls, setting KPIs aligned to the SDGs which relate to the issuers' products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. Engagement with corporate issuers will take place within 12 months of purchasing the securities issued by the corporate issuer.

The Sub-Investment Manager will prioritise investment in corporate issuers that have the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs. The corporate issuer's progress relative to the KPIs set is evaluated by the Sub-Investment Manager quarterly. This direct engagement with corporate issuers is an essential part of the investment process and the Portfolio's contribution towards the achievement of the SDGs.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, credit worthiness is complemented by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is a key component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

## II. Engagement:

The Sub-Investment Manager engages directly with management teams of corporate issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with corporate issuers, as an important part of its investment process (including the investment selection process). Corporate issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of corporate issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with corporate issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately.

The Sub-Investment Manager firmly believes this consistent engagement with corporate issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Portfolio promotes environmental and social characteristics, whilst contributing towards the achievement of the SDGs by aiming to engage directly with 100% of the corporate issuers, primarily through in-person meetings and calls, setting key KPIs aligned to the SDGs which relate to the issuers' products, services, operations or processes, with the goal of having a positive outcome on the environment and/or society. Engagement with corporate issuers will take place within 12 months of purchasing the securities issued by the corporate issuer.

The Sub-Investment Manager will prioritise investment in corporate issuers that have the ability and willingness to engage with the Sub-Investment Manager on specific KPIs aligned to the SDGs. The corporate issuer's progress relative to the KPIs set is evaluated by the Sub-Investment Manager quarterly. This direct engagement with corporate issuers is an essential part of the investment process and the Portfolio's contribution towards the achievement of the SDGs.

The Sub-Investment Manager will use an in-house tool to screen for the likelihood of achieving success in engagement with an issuer prior to investment (the "**Engagement Potential Indicator**"). The Engagement Potential Indicator, on a scale of 1-5, provides a systematic evaluation of an issuer's willingness and ability to engage with the Sub-Investment Manager on the SDGs. For example, an issuer determined to be unwilling or unable to engage would receive an Engagement Potential Indicator of "1", whereas an issuer willing to engage on becoming a leader in contributing to the SDGs would receive an Engagement Potential Indicator of "5". The Sub-Investment Manager does not intend to invest in issuers with an Engagement Potential Indicator rating of below "2". The Engagement Potential Indicator considers a diverse set of factors including the relevance of the SDGs to an issuer's business operations, an issuer's disclosure practices and the Sub-Investment Manager's relationship with the issuer, in addition to the financial constraints of the issuers.

## III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

**What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of corporate issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee corporate issuers. The Sub-Investment Manager views this direct engagement with corporate issuers, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a corporate issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding a minimum of 10% sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves. .

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>8</sup>**

- Yes:
- In fossil gas       In nuclear energy
- No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>8</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

- **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

- **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

While the Portfolio may invest in sustainable investments with an environmental objective, such sustainable investments may not be in Taxonomy-aligned investments as they may not satisfy the criteria for same.

- **What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

- **What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

- **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A - The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

- **How does the designated index differ from a relevant broad market index?**

N/A

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

The Directors of the Company whose names appear in the “*Management and Administration*” section of the Prospectus accept responsibility for the information contained in this document. To the best of the knowledge and belief of the Directors (who have taken all reasonable care to ensure that such is the case) the information contained in this document is in accordance with the facts and does not omit anything likely to affect the importance of such information. The Directors accept responsibility accordingly.

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## LIQUID ALTERNATIVES SUPPLEMENT 6 DECEMBER 2023

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-funds, each of which is a separate portfolio of the Company:

NEUBERGER BERMAN US LONG SHORT EQUITY FUND

NEUBERGER BERMAN U.S. EQUITY INDEX PUTWRITE FUND

NEUBERGER BERMAN MACRO OPPORTUNITIES FX FUND

(the “Portfolios”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to the Portfolios, this Supplement shall prevail.

The SFDR Annex (as defined herein) for Neuberger Berman US Long Short Equity Fund has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to Neuberger Berman US Long Short Equity Fund in accordance with SFDR. The SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of the SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR for the Neuberger Berman US Long Short Equity Fund, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	with respect to: <ul style="list-style-type: none"> <li>(a) the Neuberger Berman US Long Short Equity Fund and the Neuberger Berman U.S. Equity Index Putwrite Fund, a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business; and</li> <li>(b) the Neuberger Berman Macro Opportunities FX Fund, a day (except Saturday or Sunday) on which the relevant financial markets in London and Paris are open for business;</li> </ul>
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in each Portfolio;
<b>Dealing Deadline</b>	<ul style="list-style-type: none"> <li>(a) 11:00 am (Irish time) on the relevant Dealing Day in respect of the Neuberger Berman Macro Opportunities FX Fund; and</li> <li>(b) 3.00 pm (Irish time) on the relevant Dealing Day in respect of each other Portfolio.</li> </ul> <p>In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day for each Portfolio;</p>
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day in respect of each Portfolio or such other time as the Directors may determine in respect of a Portfolio;
<b>Portfolios</b>	the Neuberger Berman US Long Short Equity Fund, the Neuberger Berman U.S. Equity Index Putwrite Fund and the Neuberger Berman Macro Opportunities FX Fund;
<b>SFDR Annex</b>	the annex hereof setting out the pre-contractual disclosures template with respect to the Neuberger Berman US Long Short Equity Fund, prepared in accordance with the requirements of Article 8 of SFDR; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited and Neuberger Berman Investment Advisers LLC or such other company as may be appointed by the Manager from time to time in respect any particular Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolios carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of the information specific to each Portfolio, as included in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolios will achieve their respective objectives. While there are some risks described below that may be common to a number or all of the Portfolios, there may also be specific risk considerations which apply only to particular Portfolios.

## Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolios shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Distributing Classes in the Neuberger Berman U.S. Equity Index Putwrite Fund shall be declared on a quarterly basis and will be paid within 30 Business days thereafter;
- each of the other Distributing Classes in the Neuberger Berman US Long Short Equity Fund will be declared on a semi-annual basis and paid within 30 Business Days thereafter; and

- each of the other Distributing Classes in the other Portfolios shall be declared on an annual basis and paid within 30 Business Days thereafter in relation to the Net Income of the Distributing Classes for the calendar year ended the previous 31 December.

## Subscriptions and Redemptions

Subscriptions for Shares in all Classes in each Portfolio which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the Classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched, from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolios will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman US Long Short Equity Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.**

**Investment Objective** Seek long term capital appreciation with a secondary objective of principal preservation.

**Investment Approach** The Portfolio will seek to achieve its objective by taking long and synthetic short positions in equity and equity-linked securities listed or traded in US equity markets and in Exchange Traded Funds (“ETFs”), which are exposed to such securities. The Portfolio may also, but to a lesser extent take long and synthetic short positions in equity, equity-linked securities and ETFs which are listed or traded on Recognised Markets located in the countries comprising the MSCI ACWI (All Country World Index) (which may include Emerging Market Countries) and described in the “*Instruments/Asset Classes*” section.

Equity securities in which the Portfolio invests generally include those of companies across all industrial sectors with a market capitalization of at least USD250 million, measured at the time the Portfolio first invests in them. The Portfolio may continue to hold or add to an existing position in a stock after the company’s market value has fallen below USD250 million.

The net market exposure (sum of long and synthetic short positions) of the Portfolio will typically be positive, meaning that long positions will generally be in greater proportion than synthetic short positions. However, the Portfolio’s net market exposure may vary in time and range from a maximum net long position of 150% to a maximum net short position of 20% of the Net Asset Value of the Portfolio, depending on the Sub-Investment Manager’s analysis of the prevailing market conditions and considered in light of the investment objective of the Portfolio.

With respect to any portion of the Portfolio invested in long equity positions, the Sub-Investment Manager generally intends to invest in companies which it believes to be undervalued and which possess one or more of the following characteristics: (i) companies with strong competitive positions in industries with attractive growth prospects; (ii) companies with the ability to generate sustainable cash flows which are growing at a modest rate over the long-term; (iii) companies whose market price is below the Sub-Investment Manager’s estimate of the company’s intrinsic value; and (iv) companies with the potential for a catalyst, such as a merger, liquidation, spin off, or management change. The Sub-Investment Manager’s estimate of a company’s intrinsic value represents the Sub-Investment Manager’s view of the company’s true, long-term economic value (the value of both its tangible and intangible assets), which may be currently distorted by market inefficiencies.

As noted above, the Portfolio can seek to achieve its objective by taking synthetic short positions. For these purposes, “synthetic” short positions are generally investments in FDI made by the Sub-Investment Manager to hedge risk or enhance returns in anticipation of a reference asset or security declining in value. The Portfolio’s synthetic short positions may include, among others: (i) synthetic short sales of ETFs representing macro-economically challenged markets, industries, countries or regions; (ii) synthetic short sales of the equity securities of companies that the Sub-Investment Manager expects to decline in price, lose economic value or generally underperform; or (iii) synthetically short positions designed to offset cyclical, currency, or country-specific risks, including, but not limited to, synthetic short positions in stock index futures and options on securities.

The Portfolio may take such positions by investments in FDI that include contracts for differences, options and other derivatives (see “*Instruments/Asset Classes*” below).

The Portfolio may also, but generally to a lesser extent, take long positions in fixed income securities of US and non-US companies, including below investment grade securities (sometimes referred to as “junk bonds”), without any particular focus on any one industrial sector. The Portfolio does not generally take synthetic short

positions in respect of fixed income securities; however, it may take synthetic short positions in ETFs which themselves invest in fixed income securities. In selecting fixed income securities, the Sub-Investment Manager generally looks for securities issued by companies that are believed to have strong management and compelling valuation. In doing so, the Sub-Investment Manager analyses such factors as: ability to generate free cash flow; a demonstrated commitment to use that cash flow to pay down existing debt; and an improving credit profile. As such, the Sub-Investment Manager focuses on securities issued by companies that it believes to have demonstrated improvements in their leverage and asset coverage ratios, are not unreasonably constrained by their existing financing arrangements and have debt with manageable payment schedules.

Although the Portfolio will concentrate its investments in securities issued by companies domiciled in or governments and government related entities of North America, without any particular focus on any one region or industrial sector, the Portfolio may also invest in securities of issuers located in Emerging Market Countries and/or below investment grade debt securities, which may involve additional risk, relative to investment in more developed economies and/or investment grade debt securities.

The Portfolio is actively managed and does not intend to track the Benchmarks and are not constrained by them. The Benchmarks are included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of either of the Benchmarks. While the Portfolio may acquire securities which are components of the Benchmarks, it will not do so because of their inclusion in the Benchmarks.

---

#### Benchmarks

HFRX Equity Hedge Index (Total Return, USD) an index that is designed to be representative of equity hedge fund strategies which maintain positions both long and short in primarily equity and equity derivative securities. Equity Hedge managers would typically maintain at least 50%, and may in some cases be substantially entirely invested in equities, both long and short.

The S&P 500 Index (Total Return, Net of tax, USD) which is a capitalisation weighted index of 500 stocks designed to measure performance of the broad economy of the US through changes in the aggregate market value of 500 stocks representing all major industries.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

#### Base Currency

US Dollars (USD).

---

#### Instruments / Asset Classes

The Portfolio will primarily invest in the following securities which may be issued and listed or traded on Recognised Markets globally. The Portfolio can invest in or be exposed to the following types of assets.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, depositary receipts, and UCITS eligible partnership interests (which are effectively equivalent to shares but are issued by an issuer established as a limited partnership instead of as a company), rights, warrants, and recently issued securities of the types described above, which are unlisted but have been issued with an undertaking to apply for admission to listing on a Recognised Market within a year of issue.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located in globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.

**Fixed Income Securities (Debt securities).** These securities may include:

---

- Fixed and floating rate debt securities, including bonds, convertible bonds, debentures and notes (including freely transferable notes and freely transferable promissory notes) issued by governments, government agencies and corporate entities. Debt securities may be rated investment grade, high yield or unrated; and
- Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities.

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under “Collective Investment Schemes” below, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as “junk bonds”.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio’s other investments, provided that the Portfolio may not invest more than 10% in other collective investment schemes (including ETFs which are structured as collective investment schemes) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager or the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank’s rules, which may be domiciled in Relevant Jurisdictions or the United States of America and will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute VaR exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative VaR exceeds twice the VaR of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**Financial Derivative Instruments (“FDIs”).** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, the Portfolio may use the following FDI, for hedging, risk or efficient portfolio management and/or investment purposes:

- Futures contracts based on fixed income securities, UCITS eligible bond indices, UCITS eligible equity indices and interest rates and currencies may be used to achieve a profit as well as to hedge existing long positions;
- Options on equity securities, UCITS eligible equity indices, UCITS eligible bond indices and fixed income securities may be used to achieve a profit as well as to hedge existing long positions;
- Swaps including contract for difference, interest rate, credit default and total return may be used to achieve a profit as well as to hedge existing long positions. The maximum proportion of the Portfolio’s Net Asset Value that can be subject to total return swaps is 90%. The expected proportion of the Portfolio’s Net Asset Value that will be subject to total return swaps is 45%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Forwards on currencies contract may be used to hedge existing long positions;
- Warrants (including equity warrants) and rights (including equity rights) may be

used to achieve a profit as well as to hedge existing long positions; and

- Convertible bonds may be used for investment and efficient portfolio management purposes, including to hedge or to achieve exposure to a particular security.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Sub-Investment Manager may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

### Investment Restrictions

- Under normal market conditions, the Sub-Investment Manager will invest:
  - A minimum of 75% of the Portfolio's total gross notional exposure in securities issued by companies domiciled in or governments and government related entities of North America defined as the US, Canada and Mexico;
  - No more than 30% of the Portfolio's total gross notional exposure in fixed income securities issued by US and non- US companies or governments and government related entities; and
  - No more than 20% of the Portfolio's total gross notional exposure in securities issued by companies or governments and government related entities in Emerging Market Countries.
- The Portfolio may not invest in stocks issued by companies with a market capitalization less than USD250 million, measured at the time the Portfolio first invests in them. The Portfolio may not invest more than 10% of the Portfolio's Net Asset Value in units of other collective investment schemes including ETFs.
- The Portfolio will not utilise securities lending or margin lending.

### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the "*Investment Risks*" section of the Prospectus. While investors should read and consider the entire "*Investment Risks*" section of the Prospectus, the risks summarised in the following section, namely, "*Risks related to Financial Derivative Instruments*" are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio's global exposure is subject to an advanced risk management process which, in compliance with the UCITS Regulations, aims to ensure that on any day the Absolute VaR of the Portfolio will be no greater than 4.47% of its Net Asset Value (or maximum 20% 1 Month 99% confidence VaR). The VaR of the Portfolio is a daily estimation of the maximum loss which the Portfolio may incur over a one day holding period and is arrived at through quantitative simulations with a 99% one tailed confidence interval and using a historical observation period of at least 250 business days. This process is described in detail in the statement of risk management procedures of the Company and its appendix in respect of the Portfolio. While the Portfolio measures and monitors its global exposure using the VaR approach, rather than by use of the Commitment Approach, the leverage of the Portfolio as calculated using the Commitment Approach is not expected to exceed 100% of its Net Asset Value as a result of its use of FDI. Measuring levels of leverage using the absolute Sum of the Notionals of the derivatives used, as required by the Central Bank, would produce a leverage percentage of approximately 200% of the Portfolio's Net Asset Value, although investors should note that higher levels of leverage may be experienced. That methodology does not reflect any netting or hedging that the Portfolio may have in place.

- The Sub-Investment Manager may use forward and future currency contracts in order to hedge some currency risk on a discretionary basis. The use of such hedging techniques may increase the risk profile of the Portfolio.

**Environmental, Social and Governance (“ESG”)**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager assess securities in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

**Typical Investor Profile**

Investment in the Portfolio may be suitable for investors who are prepared to accept the risks of a diversified portfolio, mainly invested in US equities by taking long and synthetic short positions. This includes investing in global equity and bond markets, with the potential to allocate to the securities of Emerging Market Countries and/or below investment grade securities together with medium to high levels of volatility due to the Portfolio’s investment policies or portfolio management techniques.

**Fees and Expenses**

The Manager may be entitled to receive a performance fee payable out of the Portfolio’s assets in respect of each PF Class in the Portfolio.

**DEFINITIONS**

<b>Calculation Period</b>	<p>The Calculation Period shall normally run from 1 January to 31 December in each year except that:</p> <ul style="list-style-type: none"> <li>• in the case of the initial issue of Shares in each PF Class, the first Calculation Period will run from the date of issue to 31 December;</li> <li>• in the case of the termination of a PF Class, the Calculation Period will terminate on the date of the termination; and</li> <li>• in the case of the termination of the Management Agreement in any year, the Calculation Period will terminate on the date of the termination.</li> </ul> <p>The first value used in determining the first Performance Fee for a PF Class shall be the Initial Offer Price.</p>
<b>Crystallisation</b>	<p>The point at which any Performance Fee becomes payable to the Manager. Crystallisation will occur either at the end of the Calculation Period or on a Dealing Day on which a Shareholder redeems or exchanges all or part of its Shareholding.</p>
<b>High Water Mark</b>	<p>The greater of: (i) the initial offer price per Share; and (ii) the Net Asset Value per Share at the end of any previous Calculation Period in respect of which a Performance Fee was paid.</p>

**METHODOLOGY**

For each Calculation Period, a Performance Fee in respect of each PF Class in issue becomes due in the event that the Net Asset Value per Share at the end of the Calculation Period exceeds the High Water Mark (net of all costs before the deduction of any accrued Performance Fee, provided that in doing so it is in the Shareholder’s best interest) for that particular PF Class.

The Performance Fee will be calculated on each Dealing Day and will be equal to 15% of the amount by which the percentage growth in the Net Asset Value per Share over the Calculation Period exceeds that of the High Water Mark. The Performance Fee will be accrued on each Dealing Day and will form part of the Net Asset Value per Share for each PF Class where applicable. Any Performance Fee accrual on a Dealing Day will be superseded by any accrual made on the following Dealing Day up to the last Dealing Day of the Calculation Period.

In all cases the Net Asset Value per Share used in the calculation of the Performance Fee is unswung, i.e. it does not include any adjustment for swing pricing.

No Performance Fee will be paid until the Net Asset Value per Share exceeds the High Water Mark and such fee is only payable on the outperformance of the Net Asset Value per Share over the Hurdle Rate as described above.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level and as no series accounting is applied in respect of the Performance Fee, they may be charged a Performance Fee even where the Net Asset Value of their Shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of a Calculation Period.

The Performance Fee will be accrued in the Net Asset Value on each Dealing Day and will normally be payable to the Manager in arrears within 30 Business Days of the end of each Calculation Period. However, in the case of Shares redeemed during a Calculation Period, the accrued performance fee in respect of those Shares will be payable to the Manager within 30 Business Days of the date of redemption.

Crystallised Performance Fees shall remain in the relevant PF Class (but shall not participate in subsequent gains and losses of the relevant Class) until paid to the Manager and shall not be used or made available to satisfy redemptions or pay any fees and expenses of the relevant PF Class.

The Depositary shall verify the calculation of the Performance Fee and ensure that it is not open to the possibility of manipulation.

The Directors may, with the consent of the Manager, reduce the Performance Fee payable by any PF Class. Performance Fees are payable on realised and unrealised capital gains, which for the avoidance of doubt includes investment income, taking into account realised and unrealised losses at the end of the Calculation Period. Consequently, Performance Fees may be paid on unrealised gains which may subsequently never be realised.

#### WORKED EXAMPLES

Examples 1 to 3 show how the Performance Fee is calculated, accrued and crystallised. All valuation points fall within one Calculation Period.

Valuation point	1	2	3	4
NAV of PF Class Shares	US\$10.000	US\$10.100	US\$9.900	US\$10.200
High Water Mark	US\$10.000	US\$10.000	US\$10.000	US\$10.000

#### Example 1

Investor A acquires PF Class Shares at valuation point 1 for US\$10.000

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$15\% \times (\text{US}\$10.100 - \text{US}\$10.000) = \text{US}\$0.015$	Accrued in NAV
Valuation point 3		None: NAV < High Water Mark	
Valuation point 4		$15\% \times (\text{US}\$10.200 - \text{US}\$10.000) = \text{US}\$0.030$	Accrued in NAV

#### Example 2

Investor B acquires PF Class Shares at valuation point 3 for US\$9.900

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1			
Valuation point 2			
Valuation point 3	US\$9.900		
Valuation point 4		$15\% \times (\text{US}\$10.200 - \text{US}\$10.000) = \text{US}\$0.030$	Accrued in NAV

**Example 3**

Investor C acquires PF Class Shares at valuation point 1 for US\$10.000 and redeems at valuation point 4

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$15\% \times (\text{US}\$10.100 - \text{US}\$10.000) = \text{US}\$0.015$	Accrued in NAV
Valuation point 3		None: NAV < High Water Mark	
Valuation point 4		$15\% \times (\text{US}\$10.200 - \text{US}\$10.000) = \text{US}\$0.030$	US\$0.030

**SCENARIOS<sup>1</sup>**

All scenarios show the value of US\$100K invested in Shares in a PF Class

**Scenario 1** illustrates the effect of the NAV performance being 5% per annum in three consecutive years

**Scenario 2** illustrates the effect of the NAV growth being 10%, -5%, and 4% in three consecutive years

**Scenario 3** illustrates the effect of the NAV growth at 4%, 0% and -2% in three consecutive years

**Scenario 1**

	Period One	Period Two	Period Three
	5% growth	5% growth	5% growth
<b>Gross Value of PF Class Shares at year end</b>	US\$105,000	US\$108,244	US\$111,589
<b>Management Fee 1.00%</b>	US\$1,050	US\$1,082	US\$1,116
<b>Other expenses 0.30%</b>	US\$315	US\$325	US\$335
<b>Initial Net Asset Value of PF Class Shares at year end (NAV)</b>	US\$103,635	US\$106,837	US\$110,138
<b>High Water Mark</b>	US\$100,000	US\$103,090	US\$106,275
<b>Performance Fee (15% over the High Water Mark)</b>	US\$545  As NAV > High Water Mark, $15\% \times (\text{US}\$103,635 - \text{US}\$100,000)$	US\$562  As NAV > High Water Mark, $15\% \times (\text{US}\$106,837 - \text{US}\$103,090)$	US\$579  As NAV > High Water Mark, $15\% \times (\text{US}\$110,138 - \text{US}\$106,275)$
<b>Total Fees Paid</b>	US\$1,910	US\$1,969	US\$2,030
<b>Final Net Asset Value of PF Class Shares at year end</b>	US\$103,090	US\$106,275	US\$109,559

**Scenario 2**

	Period One	Period Two	Period Three
	10% growth	-5% growth	4% growth

<sup>1</sup> Investors should note that these scenarios are purely intended to be illustrative of the impact of different investment performance and have been simplified in some non-material respects to aid this understanding. For example, management fees and other expenses are in reality accrued on a daily basis but their calculation is presented in a simplified manner here for ease of review.

<b>Gross Value of PF Class Shares at year end</b>	US\$110,000	US\$101,920	US\$104,619
<b>Management Fee 1.00%</b>	US\$1,100	US\$1,019	US\$1,046
<b>Other expenses 0.30%</b>	US\$330	US\$306	US\$314
<b>Initial Net Asset Value of PF Class Shares at year end (NAV)</b>	US\$108,570	US\$100,595	US\$103,259
<b>High Water Mark</b>	US\$100,000	US\$107,285	US\$107,285
<b>Performance Fee (15% over the High Water Mark)</b>	US\$1,286	US\$0	US\$0

### Share Classes

With effect from 6 February 2015, the USD A Accumulating Shares and the SGD A Accumulating Shares in the Portfolio were renamed as the “USD A1 Accumulating Shares” and the “SGD A1 Accumulating Shares” respectively. All other features of these Classes, including fee levels and minimum initial subscription and minimum holding amounts remain unchanged.

Notwithstanding the information contained in Annex II to the Prospectus, A1 Classes are available in the Portfolio in the following currencies, subject to the following minimum initial subscription and minimum holding amounts.

<sup>2</sup> The Class A1 Shares are a legacy share class whereby investment is subject to the Shareholder entering into a separate agreement with the Sub-Investment Manager or a Distributor.

Category	Currency	Minimum Initial Subscription Amount	Minimum Holding Amount
A1	AUD	1,000	1,000
	BRL	2,500	2,500
	CAD	1,000	1,000
	CHF	1,000	1,000
	CLP	500,000	500,000
	CNY	10,000	10,000
	DKK	5,000	5,000
	EUR	1,000	1,000
	GBP	1,000	1,000
	HKD	10,000	10,000
	ILS	5,000	5,000
	JPY	100,000	100,000
	NZD	1,000	1,000
	SEK	5,000	5,000
	SGD	1,000	1,000
	USD	1,000	1,000
ZAR	10,000	10,000	

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C, C1</b>	1%	0%	0%	0%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

Notwithstanding the information set out under the “Classes” section within “Annex II – Share Class Information” to the Prospectus, please note that, subject to any transitional period or other arrangement agreed with Shareholders in the relevant Classes, Shares in the Category B, C2 and E Classes will automatically convert into Shares in the corresponding T Class, at no additional cost to holders of such Shares, upon the expiry of four years (Category B Classes), two years (Category C2 Classes) and three years (Category E Classes) from the date of the initial subscription into the relevant B, C2 or E Class.

## Neuberger Berman U.S. Equity Index Putwrite Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Portfolio is not equivalent to a deposit; the value of Shares may go down as well as up and investors may not get back any of the amount invested. Investors should note that the Portfolio may achieve its investment objective by investing principally in FDI as described below which may be complex and sophisticated in nature.**

<b>Investment Objective</b>	To seek long term growth of capital and income generation.
<b>Investment Approach</b>	<p>The Portfolio seeks to achieve its goal primarily through a strategy of writing collateralized put options on U.S. equity indices and exchanged traded funds (“ETFs”) providing exposure to U.S. equity indices, such as the S&amp;P 500. The put options will be traded on Recognised Markets.</p> <p>The strategy is intended to generate returns through the receipt of option premiums, which in turn is intended to reduce volatility relative to holding the underlying equity index, or ETF, on which the options are written. Volatility should be reduced because index exposure achieved through the options generally exhibits lower sensitivity to the underlying equity index than simply holding the underlying equity exposure directly.</p> <p>The Portfolio will collect premiums on written put options while maintaining a collateral portfolio, consisting primarily of fixed income instruments of any duration, including U.S. Treasury securities, Non-U.S. government bonds, cash and cash equivalents, securities issued by the U.S. government and its agencies, bank certificates of deposit, mortgage-backed securities, asset-backed securities, corporate debt securities, and money market mutual funds and ETFs (such money market mutual funds and ETFs, “Underlying Funds”), as more particularly described in the section entitled “<i>Instruments/Asset Classes</i>”.</p> <p>Because the Portfolio will use derivatives to gain exposure to the equity markets, and because derivatives may not require the Portfolio to deposit the full notional amount of the investment, the Portfolio may invest a significant amount of its assets in collateral instruments. The collateral instruments held by the Portfolio will be primarily investment grade fixed income instruments. Assets are chosen to provide liquidity and preserve capital, while at the same time serving as collateral for the put options written by the Portfolio. When selecting assets, the Sub-Investment Manager considers relevant factors to build a diversified portfolio of short term bonds, including the maturity of a particular asset, as well as the credit rating of the issuer and whether or not the Portfolio already holds assets issued by that issuer.</p> <p>The Portfolio may, on a limited basis, buy directly equity securities or ETFs, as more particularly described in the section entitled “<i>Instruments/Asset Classes</i>”, that provide exposure consistent with the Portfolio’s U.S. equity index exposures. The Portfolio may do so to maintain equity exposures (in both performance and weighting) consistent with the Portfolio’s strategic Benchmark (as defined in the section entitled “<i>Benchmark</i>”) and investment objective.</p> <p><i>Put-writing</i></p> <p>In a put-writing strategy, the Portfolio (as the seller of the option) receives premiums from the purchaser of the option in exchange for providing the purchaser with the right to sell the underlying instrument to the Portfolio at a specific price (i.e., the exercise price or strike price). If the market price of the instrument underlying the option exceeds the strike price, it is anticipated that the option would go unexercised and the Portfolio would earn the full premium upon the option’s expiration or a portion of the premium upon the option’s early termination. If the market price of the instrument underlying the option drops below the strike price, it is anticipated that the option would be exercised and the Portfolio would pay the option buyer the difference between the market value of the underlying instrument and the strike price.</p> <p>Expiry date is the last date on which the holder of the option may exercise it according to its terms. The Sub-Investment Manager will be using exchange-traded option contracts. Typically exchange-traded option contracts expire according to a pre-determined calendar. The strike price (or exercise price) of a put option is the fixed price at which the owner of the option can sell the underlying security.</p>

The proceeds received by the Portfolio for writing put options will be invested in the fixed income instruments, money market mutual funds and ETFs described above (and below in the section entitled “*Instruments/Asset Classes*”) in order to seek to meet any liabilities the Portfolio may incur from writing put options (eg, where the Portfolio is called by the purchaser of an option to pay the difference between the market value of the underlying instrument and the strike price of the option).

By writing options on the index-based underlying securities described above, the Portfolio is exposed to the same market risks as holding the underlying security in the event of a fall in the market price of that security.

#### *Portfolio management*

The Sub-Investment Manager will select option investments based on their estimate of market volatility levels, underlying instrument valuations and market risks. The Sub-Investment Manager will draw upon the resources of its internal team of analysts as well as external sources of market data to determine these estimates. Further, the Sub-Investment Manager will evaluate relative option premiums in determining preferred option contract terms, such as exercise prices and expiration dates.

The Sub-Investment Manager will seek to maintain option notional exposures (ie, will seek to write options with underlying exposures that are) consistent with the regional exposure of the Benchmark (as defined in the section entitled “*Benchmark*”). Allocation to specific indexes may vary over time based on current and expected option premiums and index volatility levels. The Sub-Investment Manager will draw upon the resources of its internal team of analysts as well as external sources of market data to evaluate expected option premium and index volatility levels.

The Sub-Investment Manager will seek to diversify option exposures in the following ways.

1. Using diversified equity index options such as, but not limited to, the S&P 500.
2. Laddering option exposures across multiple expirations. Exchange traded option contracts typically expire according to a fixed calendar. Laddering across multiple expirations means not all options will expire at the same time and expiry will be ‘laddered’ / spread across expiry dates. To seek to control the option expiry the Sub-Investment Manager will, where possible, use European-style options which can be exercised only at expiration. This is as opposed to American-style options which can be exercised at any time prior to the option’s expiration.
3. Diversifying across option strike prices. Typically exchange traded option contracts have a pre-determined strike or exercise price. The Sub-Investment Manager will look for option contracts with differing strike prices to seek to ensure, in the case of exercise, that not all options are exercised at the same time when the underlying index or security reaches a certain level.
4. Rolling options at different points in time. Option positions that are not exercised can be ‘rolled’ to (ie, closed out and replaced with) an option that preserves the portfolio’s term structure exposure across expiration dates. The Sub-Investment Manager will seek to ensure that not all option positions will be rolled at the same time and that the cost of rolling options does not outweigh the benefits.

Gains may be harvested prior to expiration, by closing out an existing position and writing a new put option corresponding to the existing position but with the new strike price set at a more conservative level. The proceeds from the new option sold are an additional premium over the original premium collected.

#### *Risk Management*

The Sub-Investment Manager follows a systematic risk management process that seeks to close out high risk positions to limit downside exposure to underlying equity indexes. This discipline aims to close out in-the-money option positions and rolls the positions to new option positions. This is driven by several factors including the options’ correlation with the underlying positions, the remaining days to expiration (and how that affects the value) and notional exposures (size of position). In closing out the positions, the strategy seeks to reduce its downside exposure to the underlying index and repositions the strategy to a lower risk exposure by writing new options with different strike prices and collecting additional option premiums. Further, the Sub-Investment Manager will also look to close out options that they determine have little or no remaining risk exposure

(i.e. options that are out-of-the-money) to rebalance exposure to the underlying equity index(es) and roll the positions to new positions to collect additional premiums with intent of increasing the Portfolio's return potential.

The Portfolio will utilize cash settled index options to avoid delivery of the underlying index or security. However, in the event the Portfolio is delivered a position in the underlying security when an option is exercised, the Portfolio will liquidate the resulting long position and re-establish the option exposure.

The processes of the Sub-Investment Manager seeks to maintain a balance of setting option strike prices near to the current level of the underlying asset, while limiting the impact of short-term reversals in underlying index prices which might trigger exercise.

The Sub-Investment Manager rolls option positions in a methodical manner that aims to balance the risks between short term market reversals, causing the underlying index or security to fall in value for a short period of time, and risk of loss from continued market declines.

For positions rolled in the days prior to their expiration dates, the Sub-Investment Manager seek to roll the positions that have the limited time value remaining. Rolling a portion of the portfolio in days prior to expiration can improve diversification of strike prices and volatility levels.

#### *Collateral management*

The Portfolio's fixed income instruments will be primarily investment grade and are intended to provide liquidity and preserve capital and will serve as collateral for the Portfolio's investments in options. The Sub-Investment Manager considers fixed income instruments to be investment grade if, at the time of investment, they are rated within the four highest categories by at least one independent credit rating agency or, if unrated, are determined by the Sub-Investment Manager to be of comparable quality. Because the Portfolio will use options to gain exposure to the equity markets, and because options will not require the Portfolio to deposit the full notional amount of the investment, the Portfolio will invest a significant amount of its total assets in fixed income instruments, money market mutual funds and ETFs. Its investments in options generally will not constitute a significant amount of its total assets, however, the aggregate investment exposure of its investments in options, as discussed above, will be not be greater than 100% of its total assets.

The Portfolio is actively managed and does not intend to track the Benchmark or the Reference Benchmark (as defined in the section entitled "*Benchmark*") and is not constrained by them. The Benchmark and the Reference Benchmark are included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark and/or the Reference Benchmark. While the Portfolio may acquire securities which are components of the Benchmark and/or the Reference Benchmark, it will not do so because of their inclusion in the Benchmark and/or the Reference Benchmark.

This Portfolio is classified as an Article 6 Portfolio under SFDR.

---

#### **Benchmark**

The "Benchmark" comprises the following blend:

50% CBOE S&P 500 PutWrite Index / 50% CBOE S&P 500 One-Week PutWrite Index

The CBOE S&P 500 PutWrite Index tracks the performance of put options (collateralised by cash reserves held in a money market account) sold against the S&P500 Index on a monthly basis.

The CBOE S&P 500 One-Week PutWrite Index tracks the performance of put options (collateralised by cash reserves held in a money market account) sold against the S&P 500 Index on a weekly basis.

Each index above embeds leverage, which is taken into account when calculating the Portfolio's leverage, as described below in the "*Risk*" section.

In addition, the Portfolio will use the following benchmark as a reference benchmark for comparison purposes only (the "**Reference Benchmark**"):

The S&P 500 Index (Total Return, Net of tax, USD), which is a capitalisation weighted index of 500 stocks designed to measure performance of the broad economy of the US

---

through changes in the aggregate market value of 500 stocks representing all major industries.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of the relevant index which is denominated in the relevant Class currency.

---

**Base Currency**

US Dollars (USD).

---

**Instruments / Asset Classes**

As described above, the Portfolio will primarily write put options and will also maintain a collateral portfolio. The Portfolio's collateral portfolio will be invested across the following types of asset. The Portfolio can invest in or be exposed to the following types of assets.

**Fixed Income Securities (Debt Securities).** These securities may include:

- Both fixed and floating rate debt securities, including bonds issued by governments and government related and corporate entities worldwide denominated in local currencies. Debt securities will not embed FDI and / or leverage;
- Corporate bonds with warrants, convertible bonds, contingent convertible bonds, bonds resulting from the restructuring of syndicated loans or bank loans (e.g. "Brady" bonds), subordinated bonds, debentures and notes (including freely transferable and unleveraged structured notes, exchange traded notes and freely transferable promissory notes). Convertible bonds and contingent convertible bonds may embed FDI and / or leverage; and
- Privately issued mortgage-backed securities, asset-backed securities, structured securities, exchange traded certificates and notes (including mortgage-backed securities such as pass-through certificates, which entitle the holders to receipt of mortgage payments and interest and principal only components of mortgage-backed securities) that derive interest and principal payments from specified assets (including residential and commercial mortgages, credit card debt and pools of other kinds of receivables, such as loans, royalties or other earnings). Mortgage-backed securities, asset-backed securities and structured securities may embed FDI and / or leverage.

**Equity and Equity-linked Securities.** These Securities may include, without limitation, common stock, preferred stock, convertible preferred stock, American, European and Global Depository Receipts (securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution), units in real estate investment trusts (REITs) (investment vehicles which own, operate, or finance income-producing real estate assets) and units in Master Limited Partnerships (MLPs) (an MLP is a US partnership structure that principally derives cash flows from real estate, natural resources and commodities and that issues publicly traded units, such units being, in effect, equivalent to shares issued by a company). Equity and equity-linked securities will not embed FDI and / or leverage;

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 5% in other collective investment schemes (including ETFs which are structured as collective investment schemes) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager or the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions or the United States of America and will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

ETFs, which are investment funds whose units may be bought and sold on a securities exchange. ETFs typically invest in a portfolio of securities which is designed to track the performance of particular market segment or index. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be AIFs which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's

---

other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute VaR exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative VaR exceeds twice the VaR of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**Money Market Instruments.** These may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated. Money market instruments will not embed FDI and / or leverage.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as “junk bonds”.

**Financial Derivative Instruments (“FDIs”).** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, the Portfolio may use the following FDI for hedging, efficient portfolio management and/or investment purposes:

- Options on fixed income securities, interest rates, UCITS eligible bond indices, equity securities, UCITS eligible equity indices and currencies may be used to achieve a profit as well as to hedge existing long positions;
- Futures contracts based on fixed income securities, interest rates, UCITS eligible bond indices and currencies may be used to achieve a profit as well as to hedge existing long positions; and
- Forwards on fixed income securities and currency contracts may be used to achieve a profit as well as to hedge existing long currency exposures.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Sub-Investment Manager may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities to add excess return.

The counterparties to OTC FDI entered into in respect of the Portfolio will be entities (which will not be related to the Sub-Investment Manager or its delegates) with legal personality which may be located globally. They will be subject to ongoing supervision by a public authority and have the necessary organisational structure and resources for the relevant type of transaction. They will be subject to a credit assessment and, where the counterparty is subject to a credit rating by any Recognised Rating Agency, that rating shall be taken into account in the credit assessment. Where a counterparty is downgraded to A2 or below (or comparable rating) by such a Recognised Rating Agency, a new credit assessment in respect of the counterparty will be undertaken without delay. Collateral received by the Portfolio in the context of FDI transactions will be marked to market daily and valued in accordance with the provisions set out in the Prospectus under “*Determination of Net Asset Value*”.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

---

#### Investment Restrictions

- Under normal market conditions, it is the intention of the Sub-Investment Manager to invest a maximum of 30% of the Portfolio’s Net Asset Value in sub investment grade fixed income securities.
  - Under normal market conditions, it is the intention of the Sub-Investment Manager to maintain a small allocation to cash, but may increase that allocation up to 100% of the Portfolio’s Net Asset Value at certain times for temporary defensive purposes or
-

in circumstances of very high volatility or if they believe adverse market circumstances require.

- The Portfolio will not utilise total return swaps, securities lending or margin lending.

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the risks summarised in the following section, namely, “*Risks related to Financial Derivative Instruments*” are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged up to approximately 200% of its Net Asset Value as a result of its use of FDI and any leverage inherent in any index to which the Portfolio may be exposed, although investors should note that higher levels of leverage may be experienced. This expected leverage figure is calculated using the Sum of the Notional values of the derivatives used, as required by the Central Bank. Using this methodology does not reflect any netting or hedging that the Portfolio may have in place. The Portfolio’s global exposure is subject to an advanced risk management process which, in compliance with the UCITS Regulations, aims to ensure that on any day the Absolute VaR of the Portfolio will be no greater than 4.47% of its Net Asset Value (or maximum 20% 1 Month 99% confidence VaR). The VaR of the Portfolio is a daily estimation of the maximum loss which the Portfolio may incur over a one day holding period and is arrived at through quantitative simulations with a 99% one tailed confidence interval and using a historical observation period of at least 250 business days. This process is described in detail in the statement of risk management procedures of the Company and its appendix in respect of the Portfolio. While the Portfolio measures and monitors its global exposure using the VaR approach, rather than by use of the Commitment Approach, the leverage of the Portfolio using the Commitment Approach is expected to be 180% of its Net Asset Value as a result of its use of FDI and any leverage inherent in any index to which the Portfolio may be exposed, although investors should note that higher levels of leverage may be experienced.
- The Sub-Investment Manager may use forward and future currency contracts in order to hedge currency risk on a discretionary basis. The use of such hedging techniques may increase the risk profile of the Portfolio.

#### Typical Investor Profile

The Portfolio may be suitable for an investor seeking income and capital appreciation over a mid-to-long term horizon. The investor should be prepared to accept periods of market volatility and the risks of the capital markets in pursuit of long term goals.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.20%	0.00%
B, C2, E	0.00%	1.20%	1.00%

C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

For further information on fees, please refer to the “*Fees and Expenses*” section of the Prospectus.

## Neuberger Berman Macro Opportunities FX Fund

**Investors should note that the Portfolio may achieve its investment objective by investing principally in financial derivative instruments as described below which may be complex and sophisticated in nature. An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme, which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

**Investment Objective** The Portfolio aims to achieve a target average return of 5-6% over cash (as specified in the “*Benchmark*” section below) before fees over a market cycle (typically 3 years). Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its objective.

**Investment Approach** The Manager and Sub-Investment Manager will seek to achieve the objective:

- Firstly, by obtaining long and short exposures to a range of global liquid currencies, predominantly but not limited to the G10 currencies and opportunistically, in the most liquid Emerging Market Country currencies (these are typically the most heavily traded e.g. Brazilian Real (BRL), Singapore Dollar (SGD) and South Korean Won (KRW)) using a range of financial derivative instruments (as detailed in the *Instruments/Asset Classes* section). The Manager and the Sub-Investment Manager seek to anticipate changes in the value of currencies, using the process described below. The Manager and the Sub-Investment Manager will seek to purchase (i.e. take long positions in respect of) currencies when they are expected to appreciate and to sell (i.e. take short positions in respect of) those currencies which are expected to depreciate; and
- Secondly, through investing in global fixed income debt securities and short-dated Euro-denominated bonds to opportunistically seek to enhance cash returns and to provide liquidity and collateral cover for exposures created through the use of financial derivative instruments as outlined above.

The Manager and the Sub-Investment Manager follow a relative value fundamental process and manages the Portfolio according to a disciplined, consistent investment approach, designed to generate a highly diversified portfolio of currencies, incorporating four stages:

**Stage one:** The Manager and the Sub-Investment Manager seek to identify relative value opportunities in currencies, driven by differences between currency prices and currency values which are referred to below as dislocations. Currency prices are affected by factors that the market has priced in and currency values are estimated by the Manager and the Sub-Investment Manager through in depth daily analysis using a proprietary framework of multiple fundamental indicators over multiple time horizons such as:

- growth - countries with strong growth prospects should see their currencies outperform;
- yield - currencies with higher interest rates are attractive;
- capital flows - investment opportunities attract capital and developments in equity and commodity markets have significant influence on currency performance;
- stability - overvaluation could lead to deterioration in the value of a currency and the risk the currency will revert to its correct market range. Countries running large fiscal deficits increase their currency vulnerability;
- risk aversion - volatile markets reduce the attractiveness of higher yielding currencies. Investors look for currencies with strong fundamentals when risk aversion is high; and
- monetary policy - monetary policy expectations from the relevant national regulatory authorities influence short term dynamics.

**Stage two:** The Manager and the Sub-Investment Manager seek to understand the reasons for the dislocations between currency prices and currency values identified in stage one at each different time horizon. The size of the dislocations between currency value and currency price are then assessed and ranked. When assessing the reasons for the dislocation the Manager and the Sub-Investment Manager exercise qualitative judgment to evaluate information and events that cannot be readily quantified or modelled, for example, political events e.g. escalating political tensions between two countries or shifts in regulatory regimes e.g. the implementation of more restrictive capital markets laws.

**Stage three:** The Sub-Investment Manager will determine portfolio positioning based upon the assessment of the level of differential between the currency value and the currency price and the confidence they have in the data and information events that explain this. A significant differential between currency value and currency price in conjunction with a high degree of confidence in the factors that explain the dislocation, will result in a more significant portfolio position. A smaller differential or a lower level of confidence in the factors that explain the dislocation is likely to result in a less significant portfolio position. The Manager and the Sub-Investment Manager will implement the portfolio positioning through liquid currency forwards.

**Stage four:** The Manager and the Sub-Investment Manager will then utilise a variety of risk management tools (i.e. scenario analysis – the analysis of how proposed position would react to certain situations, including economic crises; stress testing – the analysis of the losses which a proposed position would have suffered in the past and how long it would have taken to recover and correlation measures – the analysis of how the movement of prices of two securities have behaved historically in relation to each other) to assess each of the portfolio positions' individual contribution to risk and overall portfolio diversification and resize weightings if necessary.

The Manager and the Sub-Investment Manager will implement the currency exposures selected through the process above through the use of currency derivatives, as specified in the "Instruments/Asset Class" section. The exposures achieved through the derivatives will be supported by the retention of cash collateral in the Portfolio and the Manager and the Sub-Investment Manager will allocate the management of this collateral to the Manager and the Sub-Investment Manager. The Manager and the Sub-Investment Manager will allocate the management of the collateral based upon the currency of the collateral, i.e. Euro collateral will be managed by the Manager and US Dollar collateral will be managed by Neuberger Berman Investment Advisers LLC.

The Manager and the Sub-Investment Manager will manage the collateral by investing, subject to the set out under "Management of Collateral" in the "Portfolio Investment Techniques" section in the Prospectus, in global fixed income debt securities and short-dated Euro-denominated bonds, to seek to opportunistically enhance the cash returns and provide liquidity and collateral cover. The Manager and the Sub-Investment Manager will seek to select issuers through fundamental analysis (i.e. changes in the level of issuers' indebtedness and their impact on the creditworthiness of the issuers) and technical analysis (i.e. changes in the flows of the issue of debt securities) to seek to identify undervalued securities (i.e. those which the Manager and the Sub-Investment Manager think are available at prices which are below their true value) and exploit investment opportunities. The process incorporates credit analysis on the issuers of the selected securities, issuers' liquidity and risk analysis, as well as monitoring traditional credit statistics, for example, coverage ratios (looking at the factor by which an issuer's liability can be covered by its income) or leverage ratios (looking at the factor by which the loss or return on an investment may exceed the initial investment).

The Portfolio is designed to generate positive returns across a range of market conditions and is generally expected to have low correlations with the performance of traditional equity and debt investments over long-term periods. The investment approach enables the Manager and the Sub-Investment Manager to identify dislocations, usually caused by currency flows, predominantly from non-profit seeking market participants (such as tourism flows, corporate hedging and cross-border mergers and acquisitions). Investors should note that, over the course of a market cycle, there may be significant period of time during which the performance of the Portfolio will deviate from the targeted return set out in the objective and there can be no guarantee that the Portfolio will ultimately achieve its objective.

The relative value fundamental views are mainly expressed through use of liquid currency forward contracts and, to a lesser extent, may also be implemented, at the Manager's and the Sub-Investment Manager's discretion, by investing in currency options.

The contribution to risk in developed currencies is expected to be around 70% of the overall Portfolio risk, defined as a contribution based on ex-ante (i.e. predicted future) volatility.

The securities, ETFs and exchange traded FDI in which the Portfolio invests will be listed on Recognised Markets globally.

The Portfolio may have or can be expected to have medium to high volatility due to its investment policies or portfolio management techniques.

The Portfolio may take synthetic long or synthetic short positions and the investment strategies are expected to involve substantial leverage as a result of the use of FDI for investment and hedging

purposes as outlined in this Supplement. The anticipated maximum of the ratio of the value of the long positions to the absolute value of the short positions is 2:1.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

This Portfolio is classified as an Article 6 Portfolio under SFDR.

---

**Benchmark** ICE BofA 0-1 Year AAA Euro Government Index (Total Return, EUR).

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

**Base Currency** Euro (EUR)

---

**Instruments / Asset Classes** The Portfolio will invest in or be exposed to the following types of assets:

**Financial Derivative Instruments ("FDIs")** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement, the Portfolio may use the following FDI for hedging, including synthetic short hedging, efficient portfolio management and/or other investment purposes:

- Future contracts based on interest rates, fixed income securities, UCITS eligible bond indices and currencies may be used to achieve a profit as well as to hedge existing long positions;
- Swaps and swaptions may include currency, interest rate, UCITS eligible indices, volatility, variance, credit default, excess return, cross currency and total return swaps (in respect of each of the other types of assets in which the Portfolio may invest, as described in this "Instruments/Asset Classes" section) and may be used to achieve a profit as well as to hedge existing long positions. Excess return swaps are OTC FDI under which one party will agree to pay the other the return of an underlying asset and the other party agrees to pay the first party a fee, either periodically or upfront on entry into the swap. An excess return swap differs from a total return swap because the payment that the other party receives will be based solely on the performance of the underlying asset, while the payment to the other party under a total return swap will also include an element to reflect the return which cash to the value of the notional amount of the swap would have earned on deposit. The maximum proportion of the Portfolio's Net Asset Value that can be subject to total return swaps is 10%. The expected proportion of the Portfolio's Net Asset Value that will be subject to total return swaps is 5%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Forwards on fixed income securities and currency contracts may be used to achieve a profit as well as to hedge existing long currency exposures;
- Convertible bonds may be used for investment and efficient portfolio management purposes, including to hedge or to achieve exposure to a particular security; and
- Options on fixed income securities, interest rates, interest rate futures and UCITS eligible bond indices, UCITS eligible bond indices, volatility indices and currencies may be used to achieve a profit as well as to hedge existing long positions.

Swaps, swaptions, options, futures and forwards may each be used to generate synthetic short positions for investment, hedging or efficient portfolio management purposes in respect of assets which the Manager and the Sub-Investment Manager expect to decrease in value.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Manager and the Sub-Investment Manager may be invested in the other types of securities listed in the "Instruments/Asset Classes" section above. The Manager and the Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities to add excess return.

---

The counterparties to OTC FDI entered into in respect of the Portfolio will be entities (which will not be related to the Manager and the Sub-Investment Manager or their delegates) with legal personality which may be located globally. They will be subject to ongoing supervision by a public authority, be rated at or in excess of the requirements of the Central Bank by a Recognised Rating Agency and have the necessary organisational structure and resources for the relevant type of transaction.

Any indices to which exposure is taken through FDI will be broad-based, UCITS-eligible indices which provide exposure to the performance of the types of assets in which the Portfolio may invest, as described in this “Instruments/Asset Classes” section. Where exposure is gained to a particular index or indices through the use of any of the FDI outlined above, additional information on the relevant index or indices (including information on the rebalancing frequency of the relevant index) shall be made available in the annual reports of the Company.

**Fixed Income Securities (Debt Securities).** These securities may include both fixed and floating rate debt securities, including bonds issued by governments, government-related and corporate entities, denominated in local currencies, as well as investment grade securities, which are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies.

- (i) Corporate bonds with warrants, convertible bonds (which will not embed derivatives), bonds resulting from the restructuring of syndicated loans or bank loans (e.g. “Brady” bonds), subordinated bonds, debentures, exchange traded notes and freely transferable promissory notes);
- (ii) Mortgage-backed securities, asset-backed securities, structured securities (including covered bonds, which are bonds which give investors recourse to a pool of collateral in the event of default by their issuer, mortgage-backed securities such as pass-through certificates, which entitle the holders to receipt of mortgage payments and interest and principal only components of mortgage-backed securities), exchange traded certificates and notes that derive interest and principal payments from specified assets (including residential and commercial mortgages, credit card debt and pools of other kinds of receivables, such as loans, royalties or other earnings); and
- (iii) Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities.

**Money Market Instruments.** These securities may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade by Recognised Rating Agencies or are unrated.

**Collective Investment Schemes.** The Portfolio may invest in underlying funds which are themselves exposed to investments that are similar to the Portfolio’s other investments, provided that the Portfolio may not invest more than 10% in underlying funds (including ETFs) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such underlying funds may or may not be managed by the Manager or the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

- The underlying funds in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank’s requirements, which may be domiciled in Relevant Jurisdictions and will qualify as UCITS or alternative investment fund schemes and will be regulated as such by their home state regulator;
- Underlying funds in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such underlying funds measure their global exposure; and
- ETFs are investment funds whose units may be bought and sold on a securities exchange. ETFs typically invest in a portfolio of securities that is designed to track the performance of particular market segment or index. The ETFs will be located in a Relevant Jurisdiction and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio’s other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Repo Contracts.** At the discretion of the Manager and the Sub-Investment Manager, the Portfolio will enter into Repo Contracts subject to the conditions and limits set out in the Central Bank UCITS Regulations. Any such Repo Contracts may be used for efficient portfolio management purposes. Notwithstanding the terms of the Prospectus, the maximum proportion of the Portfolio’s Net Asset Value

that can be subject to Repo Contracts is 30%. The expected proportion of the Portfolio's Net Asset Value that will be subject to Repo Contracts is 10%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions.

---

#### **Investment Restrictions**

- The Portfolio will not invest more than 5% of its Net Asset Value in underlying funds which are not ETFs and not more than 10% of its Net Asset Value in underlying funds in aggregate.
- A maximum of 30% of the Portfolio's risk (as measured by contribution to ex-ante (predicted future) volatility) may be allocated to positions taken in Emerging Market Country currencies.
- The Portfolio will not utilise securities lending or margin lending.

---

#### **Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the "Investment Risks" section of the Prospectus. While investors should read and consider the entire "Investment Risks" section of the Prospectus, the risks summarised in the following sections, namely, "Risks related to Financial Derivative Instruments" and "Market Risks: Risks relating to Debt Securities" are particularly relevant to this Portfolio. These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.
  - Investors should note that the Portfolio's target return is not guaranteed and that the Portfolio's capital is at risk. Over the course of a market cycle, the performance of the Portfolio may deviate from the targeted return and experience negative return for significant periods of time. There can be no guarantee that the Portfolio will ultimately achieve its objective.
  - Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
  - The Portfolio's global exposure is subject to an advanced risk management process which, in compliance with the UCITS Regulations, aims to ensure that on any day the Absolute VaR of the Portfolio will be no greater than 4.47% of its Net Asset Value. The VaR of the Portfolio is a daily estimation of the maximum loss which the Portfolio may incur over a one day holding period and is arrived at through quantitative simulations with a 99% one tailed confidence interval and using a historical observation period of at least 250 business days. This process is described in detail in the statement of risk management procedures of the Company and its appendix in respect of the Portfolio.
  - The Portfolio may be leveraged up to approximately 1500% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced in certain circumstances, such as, for example, in times of increased volatility, during which the Manager and the Sub-Investment Manager may want to make offsetting trades to seek to manage the risks associated with existing trades. This leverage figure is calculated using the sum of the notionals of the derivatives used, as required by the Central Bank. Using this methodology does not reflect any netting or hedging that the Portfolio may have in place, which will result in a reduction of risk. It is therefore not a risk-adjusted method of measuring leverage, which means this figure is higher than it otherwise would be if such netting and hedging positions would be taken into account.
  - For example, the notional value of a US\$1 million USD/EUR FX forward contract will reflect both legs of the contract: the buy leg of €1 million and the sell leg of US\$ 1 million, giving a notional value of greater than US\$2 million notional in total. However only the non-base currency leg (i.e. the Euro leg) of this instrument generates exposure for the Portfolio, meaning that the exposure is €1 million, which is significantly less than the notional value of the instrument. Consequently, using the notional values of FDI in order to measure leverage can lead to leverage figures that are much higher than the level of exposure which the FDI actually generate for the Portfolio. By contrast and notwithstanding that the Portfolio measures, monitors and manages its global exposure using the VaR approach, rather than by use of the Commitment Approach, the leverage of the Portfolio using the Commitment Approach, which does reflect netting and hedging arrangements, is expected to be 400% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced.
  - The Manager and the Sub-Investment Manager may use forward and future currency contracts in order to hedge currency risk, for efficient portfolio management and/or for investment purposes, in each case on a discretionary basis. The use of such hedging techniques may increase the risk profile of the Portfolio.
-

**Typical Investor Profile**

The Portfolio may be suitable for the needs of investors seeking to increase the value of their investment over the course of a market cycle, typically three years or longer, through exposure to a diversified portfolio of global currencies that can be readily bought and sold. This is a medium-to-high risk product and investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept periods of market volatility particularly over short time periods. The investor should be prepared to accept periods of market volatility and the risks of the capital markets in pursuit of long term goals. The target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio may experience periods of negative return. The Portfolio's capital is at risk.

**Fees and Expenses**

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.20%	0.00%
B, C2, E	0.00%	1.20%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	0.80%	1.00%
D, I, I1, I2, I25, I3, I4, I5	0.00%	0.60%	0.00%
M	2.00%	1.20%	0.60%
P	5.00%	0.57%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	0.90%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the "Administration Fees" heading in the "Fees and Expenses" section of the Prospectus.

**Contingent deferred sales charges**

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 730	730 - 1095	1095 - 1460	> 1460
<b>B</b>	4%	3%	2%	1%	0%

<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

For further information on fees, please refer to the "Fees and Expenses" section of the Prospectus.

SFDR Annex

**1. NEUBERGER BERMAN US LONG SHORT EQUITY FUND**

## SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman US Long Short Equity Fund (the “Portfolio”)  
**Legal entity identifier:** 54930034RCIO16VO2Z23

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** \_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager promotes a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

This ESG framework applies to the long side of the Portfolio which takes a multi-year time horizon. The Sub-Investment Manager’s short positions are short-term (typically within a year) and more tactical and therefore may or may not take ESG factors, which are long term by nature, into consideration. The anticipated long / short allocation of the Portfolio is detailed in the section of the Supplement entitled “*Investment Approach*”.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient and third party data to promote the environmental and social characteristics listed below by prioritising investment in securities issued by companies with a favourable and/or an improving NB ESG Quotient or third party rating. Pursuant to this, the Sub-Investment Manager will not take a long position in a company with a poor NB ESG Quotient or third party rating unless there is a commitment to engage with the company with an expectation that the

NB ESG Quotient or third party rating will improve over time. The Sub-Investment Manager can take short positions in companies with a poor NB ESG Quotient or third party rating where there is no expectation that the NB ESG Quotient or third party rating will improve over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas ("GHG") emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) to the long side of the Portfolio as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) and third party data are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient or third party rating have a higher chance of being included in the long side of the Portfolio. Issuers with a poor NB ESG Quotient or third party rating, especially where a poor NB ESG Quotient or third party rating is not being addressed by a company, are more likely to be removed from the long investment universe or divested from long side of the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuer placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

II. Climate Value-at-Risk:

Climate Value-at-Risk (“**CVaR**”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the long side of the Portfolio will not invest in companies whose activities breach, or were not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, the long side of the Portfolio will not invest in companies whose activities are identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

Only long positions are covered by the above listed NB ESG exclusion policies.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the long positions in the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio’s mandatory periodic report (as per the requirements of Article 11 of SFDR).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

— — — **How have the indicators for adverse impacts on sustainability factors been taken into account?**

N/A

— — — **How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in companies whose activities are identified as breaching the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio does not commit to holding Taxonomy-aligned investments.

#### Does this financial product consider principal adverse impacts on sustainability factors?

Yes

No

#### What investment strategy does this financial product follow?

The Portfolio seeks long term capital appreciation with a secondary objective of principal preservation. The Portfolio will also seek to achieve its objective by taking long and synthetic short positions in equity and equity-linked securities listed or traded in US equity markets and in ETFs, which are exposed to such securities. The Portfolio may also, but to a lesser extent take long and synthetic short positions in equity, equity-linked securities and ETFs which are listed or traded on Recognised Markets (as depicted in Annex I of the Prospectus) located in the countries comprising the MSCI ACWI (All Country World Index) (which may include Emerging Market Countries).

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria and third party data as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Companies with a favourable and/or an improving NB ESG Quotient or third party rating have a higher chance of ending up in the long side of the Portfolio. Companies with a poor NB ESG Quotient or third party rating especially where these are not being addressed by that company, are more likely to be removed from the long investment universe or divested from long side of the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company’s financial performance is also considered, such as revenue/earnings before interest, tax, depreciation, and amortisation (“**EBITDA**”) growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

This ESG framework particularly applies to the long side of the Portfolio which takes a multi-year time horizon. The Sub-Investment Manager’s short positions are short-term (typically within a year) and more tactical and therefore may or may not take ESG factors, which are long term by nature, into consideration.

#### ● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels within the long side of the Portfolio:

##### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The NB ESG Quotient or third party rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team’s proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Companies with a favourable and/or an improving NB ESG Quotient or third party rating have a higher chance of ending up in the long side of the Portfolio. Companies with a poor NB ESG Quotient or third party rating especially where these are not being addressed by that company, are more likely to be removed from the long investment universe or divested from the long side of the Portfolio.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its long side investment process (including the investment selection process).

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

## III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the long side of the Portfolio can be attained, the long side of the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

As mentioned above, only long positions are covered by the above listed NB ESG exclusion policies.

### ● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

### ● ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its long side investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

### What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 60% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 40% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio (which will include the short positions held by the Portfolio).

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
- In fossil gas       In nuclear energy
- No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of socially sustainable investments?**

N/A – the Portfolio does not commit to holding sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes short positions and the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, exposure to short positions, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the long side of the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the long side of the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent long investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

- **How does the designated index differ from a relevant broad market index?**

N/A

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The Directors of the Company whose names appear in the “*Management and Administration*” section of the Prospectus accept responsibility for the information contained in this document. To the best of the knowledge and belief of the Directors (who have taken all reasonable care to ensure that such is the case) the information contained in this document is in accordance with the facts and does not omit anything likely to affect the importance of such information. # NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## MULTI STRATEGY SUPPLEMENT

### 6 DECEMBER 2023

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-fund, which is a separate portfolio of the Company:

**NEUBERGER BERMAN UNCORRELATED STRATEGIES FUND**

(the “Portfolio”)

**CONTENTS**

Definitions .....	5
Investment Risks .....	5
Distribution Policy .....	7
Subscriptions and Redemptions.....	7
Neuberger Berman Uncorrelated Strategies Fund.....	9

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in the Portfolio at regular intervals;
<b>Dealing Deadline</b>	3.00 pm (Irish time) on the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of the Portfolio;
<b>Portfolio</b>	the Neuberger Berman Uncorrelated Strategies Fund;
<b>Portfolio Costs</b>	all fees and expenses of the Portfolio (including the management fee and the supplementary adviser fee but excluding the distribution fee (where such distribution fee is applicable)). Notwithstanding the fact that different management fees apply to each Class, a management fee of 0.75% shall be assumed for the purpose of the Portfolio's investment objective;
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC, or such other company as may be appointed by the Manager from time to time in respect to the Portfolio, with the prior approval of the Company and the Central Bank; and
<b>Uncorrelated</b>	with respect to each strategy identified in the " <i>Investment Approach</i> " section, shall mean strategies which are expected by the Sub-Investment Manager to demonstrate low correlation to traditional asset classes (such as global equity and global fixed income markets) over a full investment cycle.

## Investment Risks

Investment in the Portfolio carries certain risks, which are described in the "*Investment Risks*" section of the Prospectus and in the "Risk" section in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter; and
- each of the other Distributing Classes shall be declared on an annual basis and paid within 30 Business Days thereafter.

### Subscriptions and Redemptions

Subscriptions for Shares in all Classes in the Portfolio which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched, from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the

Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Uncorrelated Strategies Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing principally in financial derivative instruments as described below which may be complex and sophisticated in nature. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

**Investment Objective** The Portfolio aims to achieve a target average return of 5% over cash (as specified in the “*Benchmark*” section below) after Portfolio Costs over a market cycle (typically 3 years) from a diversified portfolio of Uncorrelated investment strategies.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

**Investment Approach** The Portfolio will allocate its assets to fully discretionary investment advisers, outlined in the “*Advisers*” sub-section below, which employ a variety of investment strategies and will invest globally without a focus on any particular industrial sector.

The Sub-Investment Manager is responsible for selecting each adviser to which assets will be allocated, for determining the amount of the Portfolio’s assets to allocate to each adviser and for managing such portion of the Portfolio’s assets that are not allocated to an adviser. Unless otherwise indicated, the term “*Adviser*” will be used in the supplement to mean (i) an external adviser appointed by the Sub-Investment Manager, as described above (an “*External Adviser*”), (ii) the Sub-Investment Manager acting as an adviser as described above or (iii) an affiliate of the Sub-Investment Manager appointed to act as an adviser by the Sub-Investment Manager (an “*Internal Adviser*”), in respect of a portion of the assets of the Portfolio. The Sub-Investment Manager will allocate the Portfolio’s assets to Advisers whose strategies the Sub-Investment Manager believes, when combined to form a single portfolio, can provide attractive risk-adjusted returns consistent with the Portfolio’s Investment Objective.

Exposure may be taken to a country or region through investment in companies or instruments that are listed or traded on stock exchanges or markets globally.

The Sub-Investment Manager will review a range of qualitative and quantitative factors when determining or reviewing the allocations to Advisers, including each Adviser’s investment style and historical performance and the holdings in the Adviser’s allocated assets. The Sub-Investment Manager will typically seek to target Advisers with Uncorrelated investment strategies, with a goal of building an overall portfolio of strategies which will have a low correlation to global equity and global fixed income markets over a full investment cycle. The Portfolio will invest in strategies that the Sub-Investment Manager believes will be sufficiently liquid to facilitate the daily dealing cycle of the Portfolio and capable of being priced accurately on a daily basis. The Sub-Investment Manager will monitor the performance of each Adviser and may, in their absolute discretion discontinue and adjust the allocation of assets to all or any of the Advisers at any time subsequent to their appointment. This will include taking into consideration whether the strategies followed by the Advisers continue, in the view of the Sub-Investment Manager, to be consistent with the Investment Objective of the Portfolio. The Advisers will each be regulated in their country of domicile for the purposes of investment management and have been approved to act as discretionary investment managers in respect of Irish collective investment schemes by the Central Bank.

The Sub-Investment Manager intends to allocate the Portfolio’s assets among a selection of the following strategies, which they believe are appropriate for the Portfolio and will assist in delivery of the Investment Objective, as set out above. Subject to agreed risk parameters established with the Sub-Investment Manager and which will be consistent with those described below (including, amongst others, the VaR and leverage limits disclosed in the “*Risk*” section below) in respect of the Portfolio, the relevant Adviser will have full discretion,

---

in executing each of these strategies, to select the assets that it purchases on behalf of the Portfolio based on its experience of implementing the relevant strategy, current market conditions and the Investment Objective of the Portfolio. The assets of the Portfolio will be diversified across the strategies so that no more than 50% of the Net Asset Value of the Portfolio will be allocated to any one strategy at any one time. In addition, no more than 30% of the Net Asset Value of the Portfolio will be allocated to any one Adviser at any one time. When allocating assets among the Advisers, the Sub-Investment Manager will take into account the expected volatility of returns on the portion of the Portfolio's assets allocated to an Adviser (which will be based on the expected volatility of the strategy which the Adviser will employ), as compared both to the other appointed Advisers and to traditional asset classes, such as global equity and global fixed income markets. None of the strategies will be regarded as a principal strategy of the Portfolio. Unless otherwise indicated, each of the strategies may invest in or employ any of the asset classes or instruments set out below in the "Instruments / Asset Classes" sub-section.

• **Trend Following:**

This strategy employs a range of quantitative algorithms, which are proprietary to the Adviser, that seek to identify long and synthetic short investment opportunities based on trends in the global financial markets. The strategy involves using a wide variety of FDI and securities to invest across multiple asset classes, seeking absolute returns with limited correlation to the broad equity and fixed income markets. The strategy seeks to identify price trends which occur over trading time horizons which are typically medium to long term, defined as having an investment horizon of multi-week to multi-month time periods.

• **Short Term Futures Trading:**

This strategy employs a range of quantitative algorithms, which are proprietary to the Adviser, that seek to identify long and synthetic short investment opportunities based on short term price patterns in the global financial markets and involves using futures contracts relating to equity, bond, currency and interest rate markets and currency forwards and securities to invest across multiple asset classes, seeking absolute returns with limited correlation to the broad equity and fixed income markets. Trading time horizons are typically short term, defined as having an investment horizon of intra-day to multi-week time periods.

• **Global Macro Investing:**

This strategy involves a top-down global approach to investing. The Adviser will typically take long and synthetic short positions in equity and fixed income securities and FDI referencing equity and/or fixed income securities, in an effort to benefit from those investments which the Adviser believes have the highest probability to increase in value (long positions) and those that have the highest probability to decrease in value (synthetic short positions). The Adviser seeks to identify such opportunities by applying fundamental macro-economic theory to consider and analyse factors such as the economic and political environments in countries and/or regions around the world. Specifically, the Adviser will consider factors such as: interest rate levels, monetary and fiscal policy, currency exchange rates, unemployment levels, GDP and geopolitical events and their effect on the economy of the country, region or the world.

• **Quantitative Equity Market Neutral:**

This strategy takes long and synthetic short positions in equity securities and FDI referencing equity securities based on a statistical approach to assessing whether the securities are likely to increase or decrease in value, respectively, in an attempt to generate an absolute return. The proprietary models used by the Adviser to make these assessments will attempt to assess the value of securities based on analysing information such as company accounting data from profit and loss account, balance sheet and cash flow statements, data from public guidance and statements by company management teams, earnings estimates provided by external equity sell-side analysts and price movements of the securities being analysed. The proprietary models will use this data to assign ratings in order to rank securities by perceived value and will then take long positions in securities with high ratings and synthetic short positions in those with low ratings. The net market exposure (the sum of long and synthetic short positions) of this strategy will typically aim to be neutral, meaning that long positions will generally be of a similar market exposure to synthetic short positions.

• **Discretionary Equity Market Neutral:**

This strategy takes long and synthetic short positions in equity securities and FDI referencing

---

---

equity securities, based on whether the Adviser believes the securities are likely to increase or decrease in value, respectively. The net market exposure (the sum of long and synthetic short positions) of this strategy will typically aim to be neutral, meaning that long positions will generally be of a similar market exposure to synthetic short positions. The Adviser will not use a statistical approach to selecting long and synthetic short positions, but will use discretionary judgement to determine over or under-valuation based on an assessment of factors such as the outlook for a company's industry, a company's management strategy, the company's competitive position versus peers, trends and levels of revenues, cash-flow, earnings and margins relative to the company's stock price, as well as considering other information from the company's financial statements and management guidance.

• **Statistical Arbitrage:**

This strategy takes long and synthetic short positions in equity securities and FDI referencing equity securities in an attempt to generate an absolute return while maintaining a low net exposure to the general direction of the market (i.e. rising or falling). The Adviser will deploy a model-driven approach based on an analysis of the price behaviour of different securities and FDI and the relationship between this price behaviour and that of other securities or FDI expected to demonstrate correlated behaviour ("related securities"). The goal is to identify price relationships or ranges between securities and related securities and therefore to understand when one security is over- or underpriced relative to the related securities, based on their historic traded prices. The model will then seek to take synthetic short positions in securities expected to decrease in value relative to related securities or long positions in securities expected to rise in value relative to related securities

• **Options Arbitrage:**

This strategy takes long and synthetic short positions in equity and fixed income securities and options referencing equity and fixed income securities in an attempt to generate an absolute return maintaining a low net exposure to the general direction of the market (i.e. rising or falling). The Adviser will focus on analysing different options markets to attempt to identify mis-pricings within options contracts using fundamental and/or statistical techniques. Fundamental techniques will entail a discretionary analysis of the underlying security or market referenced by an option, to take a view on whether the value of that security or market is likely to rise or fall. Statistical techniques will use quantitative models to analyse option pricing data in order to identify whether options contracts are over- or underpriced.

• **Insurance / Reinsurance:**

This strategy takes long and synthetic short positions in catastrophe (or "Cat") bonds and are linked to specifically defined loss events caused by the natural catastrophes of earthquake, windstorm or similar phenomena. The principal of a given Cat bond is potentially redeemable (and subject to partial, or in some cases total, loss) upon the occurrence of an insured loss event to which the bond is contractually linked, but should no insured loss event occur the Cat bond will pay out a pre-determined coupon that is expected to be uncorrelated to global equity and fixed income markets. The strategy seeks to build a diversified portfolio of select securities and FDI in order to capture the risk premium embedded in them (i.e. the higher levels of return which are available from investment in these securities to reflect the level of risk associated with them). The Advisers take positions based upon their assessment of whether the relevant FDI or Cat bond is over- or underpriced relative to the risk of loss.

• **Other Strategies:**

From time to time, where the Sub-Investment Manager deems such strategies to be consistent with the Portfolio's Investment Objective and overall investment policies and uncorrelated to traditional asset classes such as global equity and global fixed income markets, the Portfolio may invest in other investment strategies. In such circumstances, the investment policies of the Portfolio will be updated in advance of the implementation of any such other strategies.

At present the Sub-Investment Manager does not anticipate the above strategies becoming correlated (i.e. showing a high correlation to global equity and global fixed income markets over a full investment cycle). However, in the event that this should occur, the Sub-Investment Manager will consider whether a particular strategy should continue to be used and will exclude strategies which demonstrate persistent correlation with global equity and global fixed income markets over a full investment cycle. Investors should note that whilst the Sub-Investment Manager does not anticipate the Portfolio as a whole or the above strategies becoming correlated to traditional asset classes over a full investment cycle, there is a risk

---

that over a short term period that the Portfolio as a whole or that some of the strategies invested in may demonstrate correlation to traditional asset classes.

As the Portfolio may employ strategies which use a large number of FDI (as more fully described in the “*Instruments / Asset Classes*” section below), particularly futures, it may hold a significant proportion of its assets in cash or money market instruments to ensure that it has adequate cover for the margin requirements associated with such investments. Furthermore, in exceptional circumstances when the Sub-Investment Manager and/or any adviser anticipate adverse market, economic, political or other conditions, the Portfolio may invest primarily in cash or money market instruments or leave a significant portion of the Portfolio’s Net Asset Value of its assets uninvested for defensive purposes. The Sub-Investment Manager may also use FDIs such as put options including purchasing puts on UCITS eligible indices and put spreads on indices (i.e. buying and selling an equal number of puts on the same index with differing strike prices or expiration dates) and futures contracts based on indices for defensive purposes and such indices may include commodity indices that have been cleared in advance by the Central Bank for use by UCITS. The Sub-Investment Manager will do so in cases where this would reduce the Portfolio’s exposure to a particular security, sector, region, market or asset class in order to help avoid losses. However, if markets move in opposition to the Sub-Investment Manager’s analysis, then this could result in lost opportunity to the Portfolio.

At all times the Sub-Investment Manager retains the discretion to invest the Portfolio’s assets directly including in the event that an Adviser is terminated.

Under normal market conditions, the Sub-Investment Manager anticipates that the Portfolio’s average volatility (a measure of how much the Portfolio’s returns may vary over a year) will be within a range of 7-10%.

Although the Portfolio will concentrate its investments in the US or other OECD countries, the Portfolio may also invest in securities of companies located in and governments of Emerging Market Countries, which may involve additional risk, relative to investment in more developed economies.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio’s assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

This Portfolio is classified as an Article 6 Portfolio under SFDR.

<b>Benchmark</b>	<p>ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD).</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>
<b>Base Currency</b>	US Dollars (USD).
<b>Instruments / Asset Classes</b>	<p>The Portfolio will, through the Advisers and the Sub-Investment Manager primarily invest in or take exposure to the following assets, which may be issued and listed or traded on Recognised Markets globally. The Portfolio can invest in or be exposed to the following types of assets.</p> <p><b>Equity and Equity-linked Securities.</b> Equity securities of companies of any market capitalisation and industrial sector, which may include common and preferred stocks, rights and warrants to purchase common stock, depositary receipts, real estate investment trusts (“REITs”), exchange traded funds (“ETFs”), partnership interests and interests in special purpose acquisition vehicles.</p> <p><b>Fixed Incomes Securities (Debt Securities).</b> Both fixed and floating rate debt securities, including bonds, convertible bonds which may embed FDI and / or leverage, debentures, contingent convertible bonds (subject to a maximum of 10% of the Net Asset Value), catastrophe bonds and notes (including freely transferable and unleveraged structured notes and freely transferable promissory notes) issued by governments, government agencies and</p>

corporate entities. Debt securities may be rated investment grade, high yield or unrated and include the following:

- Asset-backed securities issued by non-governmental issuers in the OECD (including mortgage-backed securities such as pass-through certificates, collateralised mortgage obligations and interest and principal only components of mortgage-backed securities) that derive interest and principal payments from specified assets (such as agency and/or non-agency residential mortgages and commercial mortgages, credit card debt and pools of other types of receivables) which may embed FDI and / or leverage;
- Global liquid currencies (including, without limitation, Australian Dollars, Canadian Dollars, Swiss Franc, Euro, Sterling, Japanese Yen, Norwegian Krone, New Zealand Dollars, Swedish Krona and US Dollars);
- Payment-in-kind bonds (which are bonds that pay interest in the form of additional bonds of the same kind); and
- Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities.

**Money Market Instruments.** Money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, participation interests in loans (which are securitised and freely transferable), cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated. Money market instruments will not embed FDI and / or leverage.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as “junk bonds”.

**Collective Investment Schemes.** In addition, the Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% in other collective investment schemes which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager or the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions or the United States of America and will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged (i) in excess of 200% of their net asset value; or (ii) so that their 1 day absolute VaR exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative VaR exceeds twice the VaR of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**Financial Derivative Instruments (“FDI”).** The following FDI will be used for hedging, efficient portfolio management and/or investment purposes and subject to the conditions and limits imposed by the Central Bank as set out in this Prospectus. The following FDI may provide exposure to any or all of the asset classes listed above:

- Futures contracts based on fixed income securities, equity securities, UCITS eligible equity indices, UCITS eligible bond indices, UCITS eligible commodity indices, interest rates and currencies may be used to achieve a profit as well as to hedge existing long positions;
- Options on fixed income securities, interest rates, equity securities, UCITS eligible equity indices, UCITS eligible volatility indices, UCITS eligible bond indices and UCITS eligible commodity indices, volatility and currencies may be used to achieve a profit as well as to

hedge existing long positions;

- Swaps (including contracts for difference and swaptions), interest rate, volatility, variance, credit default, UCITS eligible indices, total return and currency swaps (each in respect of each of the other types of assets in which the Portfolio may invest, as described in this “*Instruments / Asset Classes*” section) may be used to achieve a profit as well as to hedge existing long positions. The maximum proportion of the Portfolio’s Net Asset Value that can be subject to total return swaps is 30%. The expected proportion of the Portfolio’s Net Asset Value that will be subject to total return swaps is 10%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Forwards on securities of the types described above, equity indices (which meet the requirements of and have been cleared by the Central Bank for use by UCITS), interest rates and currencies and non-delivery currency forwards may be used to achieve a profit as well as to hedge existing long positions;
- Notes (including structured notes and index linked notes) and convertible bonds may be used to achieve a profit as well as to hedge existing long positions; and
- Warrants may be used to achieve a profit as well as to hedge existing long positions.

The Portfolio may invest in swap agreements, futures, options on futures and structured notes and commodity-index-linked notes (which may be listed or OTC), which embed FDI, including swap agreements, futures or options to gain exposures to any indices and sub-indices referencing commodities (including but not limited to any index within the Dow Jones-UBS Commodity family of indices) which meet with the requirements of and have been cleared by the Central Bank for use by UCITS. Details of the specific indices utilised by the Portfolio and the types of commodities they reference will be available from the Sub-Investment Manager on request and contained in the annual report produced in respect of the Portfolio. These FDI will provide exposure to the investment returns of the commodities markets without investing directly in physical commodities. The Portfolio may also invest in common and preferred stocks as well as convertible securities of issuers in commodity-related industries. Any indices in which the Portfolio invests will be rebalanced monthly or less frequently, but no less frequently than annually. Rebalancing may result in an increase in the costs of the Portfolio.

In the event that market movements in respect of constituents of an index result in such index becoming over concentrated in one or more constituents such that the index no longer complies with relevant UCITS diversification requirements, the Adviser in question will review the Portfolio’s exposure to such index in conjunction with the Sub-Investment Manager and may terminate this exposure until such time as the index comes back into compliance with the UCITS diversification requirements.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Adviser may be invested in the other types of securities listed above. The Adviser may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return.

**Repo Contracts.** At the discretion of the Sub-Investment Manager, the Portfolio will enter into Repo Contracts subject to the conditions and limits set out in the Central Bank UCITS Regulations and in the Prospectus. Any such Repo Contracts may be used for efficient portfolio management purposes. Notwithstanding the terms of the Prospectus, the maximum proportion of the Portfolio’s Net Asset Value that can be subject to Repo Contracts is 30%. The expected proportion of the Portfolio’s Net Asset Value that will be subject to Repo Contracts is 5%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions.

**Structured Financial Instruments (“SFI”).** The SFI in which the Portfolio will invest will be debt securities issued by an investment bank or an investment vehicle (the “**Debt Issuer**”) established as limited liability companies by the Dealer (as described in more detail below).

The SFI shall provide exposure on a 1:1 basis to interests in an investment fund which intends to employ an investment management strategy providing exposure to the performance of commodities and/or liquid developed market fixed income securities, such as US treasury

bonds and treasury futures (an “**Underlying Fund**”). Exposure to the Underlying Fund is achieved through the issue of SFI by the Debt Issuer which will pay a return which is equivalent to the performance of the Underlying Fund.

The SFI purchased by the Portfolio shall comply with the following criteria pursuant to the requirements of the UCITS Regulations:

- (i) there shall be either a market price available or an independent valuation performed for such SFI. For the avoidance of doubt, a valuation provided by the administrator of the relevant Debt Issuer constitutes an independent valuation;
- (ii) the SFI shall be listed on one or more Recognised Markets;
- (iii) the SFI shall not embed leverage or derivatives. For the avoidance of doubt, it is understood that SFI providing exposure on a 1:1 basis do not embed leverage or derivatives;
- (iv) investments in SFI in the aggregate shall not exceed 10% of the Net Asset Value of the Portfolio; and
- (v) only investment banks with a Tier 1 rating shall act as the dealer for the SFI (the “**Dealer**”) and will enter into a legally enforceable commitment with the Company in respect of the Portfolio to purchase the SFI from the Portfolio, in the absence of Market Disruption Events (as described below) affecting the relevant SFI, at a price reflecting the price of its reference investment vehicle (i.e. the most recent net asset value of the Underlying Fund), subject to a prior notice period of at least two business days.

A market disruption event is the occurrence or existence of one or more of the following events in relation to the SFI (each, a “**Market Disruption Event**”):

- it is not possible to obtain a price or value (or an element of such price or value) of the SFI according to the rules or normal accepted procedures for the determination of such price or value (whether due to the non-publication of such price or value or otherwise);
- the calculation of the price or value of the SFI is, at the relevant time, in the opinion of the Dealer, impractical or impossible to make;
- there is any suspension of or limitation that prevents or materially limits transactions in the SFI on any exchanges, quotation systems or over-the-counter market where the SFI is traded; and/or there exists an event or circumstance that prevents or materially limits transactions in the SFI. For the purpose of this definition, a limitation on the hours and number of days of trading will not constitute a Market Disruption Event if it results from an announced change in the regular business hours of the relevant exchange, provided however that a limitation on trading imposed during the course of the day by reason of movements in price otherwise exceeding levels permitted by the relevant exchange may, if so determined by the Dealer, constitute a Market Disruption Event;
- any event that generally makes it impossible or impractical to convert any currency which was, immediately prior to the occurrence of such event, a foreign exchange currency, as determined by the Dealer;
- any event that generally makes it impossible or impractical to convert the currency of the country of issue or country of payment of the SFI into the Base Currency through customary legal channels, as determined by the Dealer;
- any event that generally makes it impossible or impractical to deliver or transfer (a) the currency of issue or payment of the SFI from accounts inside the country of issue or country of payment of the SFI to accounts outside such country of issue or country of payment or (b) the currency of the country of issue or country of payment of the SFI between accounts inside such country of issue or country of payment, or to a party that is a non-resident of the country of issue or country of payment, as determined by the Dealer;
- a general moratorium is declared in respect of banking activities in London, Dublin or New York;
- any early termination event or event of default or illegality affecting an asset underlying the SFI or other breach of obligations by the issuer of such an asset; and/or

- a change in law or regulations (including, without any limitation, any tax law), or the promulgation of or any change in the interpretation by any court, tribunal or regulatory authority with competent jurisdiction of any applicable law or regulation (including any action taken by a taxing authority), which affect the holding, acquisition, trading, transfer or hedging of the SFI.

Upon the occurrence of a Market Disruption Event, the Directors may temporarily suspend the calculation of the Net Asset Value and any subscription, redemption and exchange of Shares; and/or the Directors may, in certain circumstances, terminate the Portfolio. For further information about Market Disruption Events, the Portfolio's use of SFI and the risks associated with them, please contact the Sub-Investment Manager.

#### Investment Restrictions

- The Portfolio's exposure to commodities will not exceed 10% of its Net Asset Value.
- Although the Portfolio has no constraint in terms of credit rating or country exposure, the Sub-Investment Manager and the Advisers will take a disciplined approach to investing on behalf of the Portfolio with the intention of maintaining a portfolio that is typically diversified across strategies, issuers, industry sectors, regions and within the scope of the Portfolio's investment objective.
- No more than 50% of the Net Asset Value of the Portfolio will be allocated to any one strategy at any one time.
- No more than 30% of the Net Asset Value of the Portfolio will be allocated to any one Adviser at any one time.
- No more than 15% of the Portfolio's Net Asset Value will be invested in catastrophe bonds.
- Only Portman Square (as defined in the "Advisers" section below) will be permitted to invest in contingent convertible bonds on behalf of the Portfolio, subject to a limit of 10% of the Portfolio's Net Asset Value.
- Only Portman Square and AllianceBernstein (as defined in the "Advisers" section below) will be permitted to invest in interests in special purpose acquisition vehicles on behalf of the Portfolio, subject to a limit of 5% of the Portfolio's Net Asset Value.
- The Portfolio will not utilise securities lending or margin lending.

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the "Investment Risks" section of the Prospectus. While investors should read and consider the entire "Investment Risks" section of the Prospectus, the risks summarised in the following section, namely, "Risks related to Financial Derivative Instruments" are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged up to approximately 750% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced. This leverage figure is calculated using the sum of the notional values of the derivatives used, as required by the Central Bank. Using this methodology does not reflect any netting or hedging that the Portfolio may have in place. The Portfolio's global exposure is subject to an advanced risk management process which, in compliance with the UCITS Regulations, aims to ensure that on any day the Absolute VaR of the Portfolio will be no greater than 4.47% of its Net Asset Value. The VaR of the Portfolio is a daily estimation of the maximum loss which the Portfolio may incur over a one day holding period and is arrived at through quantitative simulations with a 99% one tailed confidence interval and using a historical observation period of at least 250 business days. This process is described in detail in the statement of risk management procedures of the Company and its appendix in respect of the Portfolio. While the Portfolio measures and monitors its global exposure using the VaR approach, rather than by use of the Commitment Approach, the leverage of the Portfolio using the Commitment Approach is expected to be 500% of its Net Asset Value as a result of its use of FDI, although investors

---

should note that higher levels of leverage may be experienced.

- The Portfolio may take synthetic long or synthetic short positions and the investment strategies are expected to involve leverage as a result of the use of FDI for investment and hedging purposes as outlined above. The Portfolio's net market exposure may vary in time, however the Portfolio's net long positions are not expected to exceed 175% of its Net Asset Value and its net short positions are not expected to exceed -175% of its Net Asset Value, depending on the Sub-Investment Manager's and/or the relevant Adviser's analysis of the prevailing market conditions and considered in light of the investment objective of the Portfolio.
  - Total return swaps and Repo Contracts may embed leverage as a result of their exposure to underlying securities. Therefore, the exposure limits set out above in relation to total return swaps and Repo Contracts should be considered in conjunction with the other leverage disclosures earlier in this "Risk" section.
  - The Sub-Investment Manager and/or the Advisers may use forward and future currency contracts in order to hedge some currency risk on a discretionary basis. The use of such hedging techniques may increase the risk profile of the Portfolio.
  - The Portfolio's returns may deviate from overall market returns to a greater degree than other funds that do not employ an absolute return focus. Thus, the Portfolio might not benefit as much as funds following other strategies during periods of strong market performance. Also, the employment of hedging strategies, if any, in an attempt to mitigate risk may cause the Portfolio's returns to be lower than if hedging had not been employed.
  - The Portfolio's performance is dependent upon the success of the Sub-Investment Manager and the Advisers in implementing the Portfolio's investment strategies in pursuit of its goal. To a significant extent, the Portfolio's performance will depend on the success of the Sub-Investment Manager's methodology in allocating the Portfolio's assets to Advisers and its selection and oversight of the Advisers. The Advisers' investment styles may not always be complementary, which could adversely affect the performance of the Portfolio. Some Advisers have little experience managing mutual funds which, unlike the hedge funds these Advisers have been managing, are subject to daily inflows and outflows of investor cash and are subject to certain legal and tax-related restrictions on their investments and operations.
  - The Portfolio may be invested in arbitrage strategies which involve the risk that underlying relationships between securities in which investment positions are taken may change in an adverse manner or in a manner not anticipated by Adviser, in which case the Portfolio may realise losses.
  - The Portfolio may invest in strategies which may engage in active and frequent trading and may have a high portfolio turnover rate, which may increase the Portfolio's transaction costs and may affect the Portfolio's performance adversely, in comparison to strategies which would result in a lower portfolio turnover rate.
  - Futures trading investment strategies may employ quantitative algorithms that rely heavily on the use of proprietary and non-proprietary data, software and intellectual property that may be licensed from a variety of sources. The quality of the investment selections produced by the portfolio construction process depends on a number of factors including the accuracy of voluminous data inputs into the quantitative models used in the investment process, the mathematical and analytical underpinnings of the coding, the accuracy in translating those analytics into program code, the speed that market conditions change and the successful integration of the various quantitative models in the portfolio selection process. To a significant extent, the performance of a strategy that utilises quantitative investment techniques will depend on the success of implementing and managing the investment models that assist in allocating assets of the Portfolio which are exposed to such strategy. Models that have been formulated on the basis of past market data may not be predictive of future price movements. Models may not be reliable if unusual or disruptive events cause market moves the nature or size of which are inconsistent with the historic performance of individual markets and their relationship to one another or to other macroeconomic events. Models may also have hidden biases or exposure to broad structural or sentiment shifts. In the event that actual events fail to conform to the assumptions underlying such models, losses could be incurred. Each component of the investment process has elements that present the possibility for human error. Because the financial markets are constantly evolving, most trading systems and models require
-

continual monitoring and enhancements. There is no guarantee that such enhancements to the various quantitative models will be identified or implemented on a timely basis or that they will be successful. The use of a trading system or model that is not effective could at any time have a material adverse effect on the performance of the Portfolio. The successful deployment of the portfolio construction process could be severely compromised by unforeseeable software or hardware malfunction and other technological failures, power loss, software bugs, malicious code such as “worms,” viruses or system crashes or various other events or circumstances within or beyond the control of the relevant Adviser. Quantitative investment techniques also present the risk that errors may occur and such errors may be extremely hard to detect. In some cases, an error can go undetected for a long period of time. In many cases it is not possible to fully quantify the impact of an error given the dynamic nature of the quantitative models and changing markets. Analytical errors, software errors, development errors and implementation errors as well as data errors are inherent risks. Quantitative investment techniques often require timely and efficient execution of transactions. Inefficient execution of trades can eliminate the ability to capture the pricing differentials that the strategy seeks to capture.

- The incentive arrangements for the Portfolio involve the payment of performance fees to the Sub-Investment Manager and could create an incentive for the Sub-Investment Manager to select riskier or more speculative Advisers than would be the case in the absence of such an arrangement. The payment of the performance fee will be based on performance which may include net realised and net unrealised gains and losses as at the end of each Calculation Period. As a result, payments of performance fees may be made in respect of unrealised gains which may subsequently never be realised.
- The methodology used by the Company in calculating the performance fees in respect of the Portfolio may result in inequalities as between Shareholders in relation to the payment of performance fees (with some investors paying disproportionately higher or lower performance fees in certain circumstances) and may also result in certain Shareholders having more or less of their capital at risk at any time than others. Past performance against the Benchmark will be shown in the Key Investor Information Documents.
- **Shareholders should also note that a performance fee may be paid in times of negative performance where the Portfolio has outperformed its Benchmark, but, overall has a negative performance.**

## Advisers

The Sub-Investment Manager will engage Advisers to provide investment management services. Each Adviser makes investment decisions in respect of the assets of the Portfolio which it has been allocated to manage, subject to the overall supervision of the Sub-Investment Manager. The Sub-Investment Manager oversees the Advisers for compliance with the Portfolio’s investment objective, policies, the strategies (as set out at “*Investment Approach*” above) and restrictions, and monitors each adviser’s adherence to its investment style.

Details of the Internal Adviser appointed by the Sub-Investment Manager are as follows:

- NB Alternatives Advisers LLC (“NBAA”) located at 325 N Saint Paul Street, Suite 4900 Dallas, TX 75201, USA. As of 30 June 2023, NBAA managed approximately US\$111 billion in total assets.

Details of the External Advisers appointed by the Sub-Investment Manager are as follows:

- Altiq LLP (“Altiq”) located at 29 Farm Street, London W1J 5RL, United Kingdom. As of 30 April 2023, Altiq managed approximately US\$590 million in total assets.
- BH-DG Systematic Trading LLP (“BH-DG”) located at 20 North Audley Street, London W1K 6LX, United Kingdom. As of 30 April 2023, BH-DG managed approximately US\$2,575 million in total assets.
- P/E Global LLC (“P/E Global”) located at 75 State Street, 31st Floor, Boston, MA 02109, USA. As of 30 April 2023, P/E Global managed approximately US\$14,200 million in total assets.
- True Partner Capital USA Holding Inc (“True Partner”) located at 111 West Jackson boulevard, Suite 1700, Chicago, IL 60604, USA. As of 30 April 2023, True Partner managed approximately US\$1,320 million in total assets.
- Sandbar Asset Management LLP (“Sandbar”) located at First Floor, 14-15 Conduit Street, London W1S 2XJ, United Kingdom. As of 30 April 2023, Sandbar managed approximately US\$1,090 million in total assets.

- Crabel Capital Management, LLC (“Crabel”) located at 10250 Constellation Blvd., Suite 2650, Los Angeles, CA 90067, USA. As of 30 April 2023, Crabel managed approximately US\$7,780 million in total assets.
- AllianceBernstein L.P. (“AllianceBernstein”) located at 1345 Avenue of the Americas, New York, NY 10105, USA. As of 30 April 2023, AllianceBernstein managed approximately US\$2,020 million in total assets.
- Portman Square Capital LLP (“Portman Square”) located at 4th Floor Reading Bridge House, George Street, Reading, Berkshire RG1 8LS, United Kingdom. As of 30 April 2023, Portman Square managed approximately US\$1,410 million in total assets.
- Soloda Investment Advisors LLP (“Soloda”) located at 3rd Floor Strand Bridge House, 138-142 Strand, London WC2R 1HH, United Kingdom. As of 30 April 2023, Soloda managed approximately US\$615 million in total assets.
- Cipher Capital LP (“Cipher”) located at 400 Madison Ave Suite 12-A, New York, NY 10017 54-62, USA. As of 14 November 2023, Cipher managed approximately US\$500 million in total assets.
- G10 Capital Limited (“G10”) located 4th Floor, 3 More London Riverside, London SE21 2AQ, United Kingdom. As of 30 September 2023, G10 managed approximately EUR€11.6 billion in total assets.

#### Typical Investor Profile

Investment in the Portfolio may be suitable for investors who are prepared to accept the risks of an absolute return investment approach to multiple asset classes over the medium to long term. This includes investing in global equity and bond markets, with the potential to allocate to securities of Emerging Market Countries and/or below investment grade securities together with medium to high levels of volatility due to the Portfolio’s investment policies or portfolio management techniques.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.50%	0.00%
B, C2, E	0.00%	1.50%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	1.00%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.75%	0.00%
M	2.00%	1.50%	0.80%
P	5.00%	0.71%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.10%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

External Advisers may charge research expenses to the Portfolio through the provision of an annual research budget for the Portfolio, as agreed with the Company.

Please also note that in respect of each Class, the Sub-Investment Manager will be entitled to receive a fee (the “Supplementary Adviser Fee”) of up to 0.75% of the Net Asset Value of the Portfolio in respect of the services provided to the Portfolio by the Advisers. The Supplementary Adviser Fee shall accrue daily and be payable monthly in arrears within 30 Business Days of the end of the calendar month.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower

of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C, C1</b>	1%	0%	0%	0%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

#### Performance Fee

The Sub-Investment Manager may also be entitled to receive a performance fee (the “**Performance Fee**”) payable out of the Portfolio’s assets and as described more fully below. All Classes in the Portfolio are PF Classes.

	GBP Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - GBP Hedged)
	CHF Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - CHF Hedged)
	JPY Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - JPY Hedged)
	<p>The Benchmark is a widely used benchmark for short-term interest rates, providing an indication of the average rates at which banks could obtain wholesale, unsecured funding for set periods in particular currencies.</p> <p>For Classes denominated in currencies other than those provided for above, the Benchmark will be the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD) hedged to the relevant class currency.</p>	
<b>Calculation Period</b>	<p>The Calculation Period shall normally run from 1 January to 31 December in each year except that:</p> <ul style="list-style-type: none"> <li>in the case of the initial issue of Shares in each Class, the first Calculation Period will run from the date of issue to 31 December of the following year;</li> <li>in the case of the termination of a Class, the Calculation Period will terminate on the date of the termination; and</li> <li>in the case of the termination of the Sub-Investment Manager, the Calculation Period will terminate on the date of the termination.</li> </ul>	
<b>Crystallisation</b>	<p>The point at which any Performance Fee becomes payable to the Sub-Investment Manager. Crystallisation will occur (i) at the end of the Calculation Period; (ii) at the termination of the appointment of the Sub-Investment Manager; or (iii) on a Dealing Day on which a Shareholder redeems or exchanges all or part of its Shareholding.</p>	
<b>Outperformance</b>	<p>The excess performance of the Net Asset Value per Share over the performance of the Benchmark during the Calculation Period.</p>	

### Methodology

For each Calculation Period, a Performance Fee in respect of each Class in issue becomes due in respect of any Outperformance, i.e. the excess performance of the Net Asset Value per Share (net of all costs before the deduction of any accrued Performance Fee, provided that in doing so it is in the Shareholder's best interest) over the performance of the Benchmark applicable to that particular Class during the Calculation Period. The Performance Fee will be calculated on each Dealing Day and will be up to 20% of the Outperformance applicable to that particular Class over the same period.

In the event that the performance of a Class over a Calculation Period is less than that of the Benchmark, no Performance Fee shall be payable in respect of that Class until such cumulative underperformance relative to its Benchmark has been recovered.

In the event that the Class has achieved Outperformance over a Calculation Period, a Performance Fee shall be payable in respect of that Class. Upon payment the Benchmark will be reset; this process ensures the Net Asset Value per Share and the Benchmark start from the same place at the start of the calculation period. Accordingly for the next Calculation Period, the commencing Benchmark value will equal the Net Asset Value in respect of the Class on which the performance fee was paid i.e. if the Net Asset Value were to equal 110 at the end of a Calculation Period in which a Performance Fee was paid, the Benchmark value at the start of the following Calculation Period would also equal 110.

Shareholders should note that, as the Performance Fee is payable on the outperformance over the Benchmark, they may be charged a Performance Fee where the Net Asset Value of their Shares has declined but to a lesser extent than the Benchmark.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level and as no series accounting is applied in respect of the Performance Fee, they may be charged a Performance Fee even where the Net Asset Value of their Shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of a Calculation Period.

The Performance Fee will be calculated and accrued daily as at each Valuation Point. The Performance Fee is calculated on the unswung Net Asset Value per Share, i.e. before any adjustment for swing pricing (for more information on "swing pricing" please see the "*Determination of Net Asset Value – Adjustments of Valuations and Swing Pricing*" section of the Prospectus).

The Performance Fee will normally be payable to the Sub-Investment Manager in arrears within 30 Business Days of 31 December each year. However, in the event of the Crystallisation of the Performance Fee during a Calculation Period, the accrued Performance Fee in respect of such amounts will be payable within 30 Business Days of the end of the calendar quarter during which the Crystallisation occurred.

Crystallised Performance Fees shall remain in the Portfolio until paid to the Sub-Investment Manager and shall not participate in subsequent gains and losses of the Portfolio. Crystallised Performance Fees shall not be used or made available to satisfy redemptions or pay any fees and expenses of the Portfolio or the Company (other than Performance Fees payable to the Sub-Investment Manager).

The Depositary shall verify the calculation of any Performance Fee and ensure that it is not open to the possibility of manipulation.

Performance Fees are payable on realised and unrealised capital gains, which for the avoidance of doubt includes investment income, taking into account realised and unrealised losses at the end of the Calculation Period. Consequently, Performance Fees may be paid on unrealised gains which may subsequently never be realised.

### WORKED EXAMPLES

**Examples 1 to 3 show how the Performance Fee is calculated, accrued and crystallised. All valuation points fall within one Calculation Period.**

Valuation point	1	2	3	4
NAV of Class Shares (Before Performance Fee Accrual)	US\$10.000	US\$10.100	US\$9.900	US\$10.200
Benchmark	US\$10.000	US\$10.050	US\$10.100	US\$10.150

**Example 1**

Investor A acquires Shares at valuation point 1 for US\$10.000 per Share

	Acquisition of Shares	Accrued Performance Fee @20%	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$20\% \times (\text{US\$}10.100 - \text{US\$}10.050) = \text{US\$}0.01$	Accrued in NAV
Valuation point 3		None: NAV < Benchmark	
Valuation point 4		$20\% \times (\text{US\$}10.200 - \text{US\$}10.150) = \text{US\$}0.01$	Accrued in NAV

**Example 2**

Investor B acquires Shares at valuation point 3 for US\$9.900 per Share

	Acquisition of Shares	Accrued Performance Fee @20%	Crystallised Performance Fee
Valuation point 1			
Valuation point 2			
Valuation point 3	US\$9.900		
Valuation point 4		$20\% \times (\text{US\$}10.200 - \text{US\$}10.150) = \text{US\$}0.01$	Accrued in NAV

**Example 3**

Investor C acquires Shares at valuation point 1 for US\$10.000 per Share and redeems at valuation point 4

	Acquisition of Shares	Accrued Performance Fee @20%	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$20\% \times (\text{US\$}10.100 - \text{US\$}10.050) = \text{US\$}0.01$	Accrued in NAV
Valuation point 3		None: NAV < Benchmark	
Valuation point 4		$20\% \times (\text{US\$}10.200 - \text{US\$}10.150) = \text{US\$}0.01$	US\$0.01

**SCENARIOS<sup>1</sup>**

All scenarios show the value of US\$100K invested in Shares and assume a performance fee of 20%.

**Scenario 1** illustrates the effect of the NAV performance being 5% per annum and the Benchmark return being 3% in three consecutive years

**Scenario 2** illustrates the effect of the NAV growth being 6%, -4%, and 6% and the Benchmark return being 3%, -2% and 3% in three consecutive years

**Scenario 3** illustrates the effect of the NAV growth at 8%, 0% and -1% and the Benchmark return being 4%, 0% and -5% in three consecutive years

**Scenario 1**

	Period One	Period Two	Period Three
	5% growth	5% growth	5% growth
Gross Value of Class Shares at year end	US\$105,000	US\$108,330	US\$111,766
Management Fee 0.75%	US\$788	US\$812	US\$838
Supplementary Adviser Fee 0.75%	US\$788	US\$812	US\$838

<sup>1</sup> Investors should note that these scenarios are purely intended to be illustrative of the impact of different investment performance and have been simplified in some non-material respects to aid this understanding. For example, management fees and other expenses are in reality accrued on a daily basis but their calculation is presented in a simplified manner here for ease of review.

<b>Other expenses 0.20%</b>	US\$210	US\$217	US\$224
<b>Initial Net Asset Value of Class Shares at year end</b>	US\$103,214	US\$106,489	US\$109,866
<b>Benchmark</b>	US\$103,000	US\$106,266 <sup>2</sup>	US\$109,637 <sup>2</sup>
<b>Performance Fee (20% of NAV outperformance over Benchmark)</b>	US\$43 As NAV > Benchmark, 20% x (US\$103,214 - US\$103,000)	US\$45 As NAV > Benchmark, 20% x (US\$106,489 - US\$106,266)	US\$46 As NAV > Benchmark, 20% x (US\$109,866 - US\$109,637)
<b>Total Fees Paid</b>	US\$1,829	US\$1,886	US\$1,946
<b>Final Net Asset Value of Class Shares at year end</b>	US\$103,171	US\$106,444	US\$109,820

**Scenario 2**

	<b>Period One</b>	<b>Period Two</b>	<b>Period Three</b>
	6% growth	-4% growth	6% growth
<b>Gross Value of Class Shares at year end</b>	US\$106,000	US\$99,800	US\$103,990
<b>Management Fee 0.75%</b>	US\$795	US\$749	US\$780
<b>Supplementary Adviser Fee 0.75%</b>	US\$795	US\$749	US\$780

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## DEVELOPED MARKET FMP – 2027 SUPPLEMENT

**6 DECEMBER 2023**

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-fund which is a separate portfolio of the Company:

**NEUBERGER BERMAN DEVELOPED MARKET FMP – 2027**

(the “Portfolio”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to this Portfolio, this Supplement shall prevail. The SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the Portfolio in accordance with SFDR. The SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of the SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in the Portfolio;
<b>Dealing Deadline</b>	3.00 pm (Irish time) on the relevant Dealing Day in respect of the Portfolio. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of the Portfolio;
<b>Portfolio</b>	the Neuberger Berman Developed Market FMP – 2027;
<b>Maturity Date</b>	31 July 2027 for the Neuberger Berman Developed Market FMP – 2027;
<b>SFDR Annex</b>	the annex hereof setting out the pre-contractual disclosures template with respect to the Portfolio, prepared in accordance with the requirements of Article 8 of SFDR;
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC or such other company as may be appointed by the Manager from time to time in respect to the Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolio carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of the information specific to the Portfolio, as included in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the (Monthly) Gross Income Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Gross Income Distributing Classes in the Portfolio shall be declared on a quarterly basis and paid within thirty Business Days thereafter; and
- each of the other Distributing Classes in the Portfolio will be declared on a quarterly basis and paid within 30 Business Days thereafter.

### Subscriptions and Redemptions

Investors should note that notwithstanding Annex II in the Prospectus, Shares are only available in the Neuberger Berman Developed Market FMP – 2027 in the A, I, X Classes.

Subscriptions for Shares in all Classes in the Portfolio will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Developed Market FMP – 2027

**The difference at any one time between the issue and repurchase price of Shares in the Portfolio means that the investment should be viewed as medium term. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

<b>Investment Objective</b>	To seek to maximise current income over the term of the Portfolio, by investing in a diversified mix of global fixed income securities, including high income securities.
-----------------------------	---

<b>Investment Term and Maturity Date</b>	Investors should note that the Portfolio seeks to provide an attractive yield over a specific term, which ends on the Maturity Date. On or within twelve months following a Portfolio's Maturity Date, the Directors intend to terminate the Portfolio and, following the liquidation of the portfolio of assets, return the proceeds thereof to Shareholders. As such, Shareholders who redeem prior to the Maturity Date may not experience the full yield the Portfolio is seeking to provide.
--	---

The Maturity Date for the Portfolio will be four years from the end of the date of the launch of the Portfolio, immediately following the last day of the Initial Offer Period. The Maturity Date for the Portfolio is therefore currently expected to be 31 July 2027. The launch date and Maturity Date for the Portfolio will be included in the financial statements for the Portfolio once confirmed.

<b>Investment Approach</b>	The Portfolio seeks to achieve its investment objective primarily by investing in US Dollar-denominated debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide. Securities will typically be dealt or traded on Recognised Markets globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a Recognised Rating Agency or may also be unrated.
----------------------------	---

The Sub-Investment Manager implements a disciplined investment process that is consistently applied across all fixed income sectors with an ongoing focus on identifying the most attractive investment opportunities in the fixed income market, building a well-diversified portfolio whilst minimising single credit issuer risk.

In seeking to identify the most attractive fixed income sectors the Sub-Investment Manager seeks to evaluate research and sector valuations undertaken by speciality investment teams within the Sub-Investment Manager. The specialty investment teams formulate an investment view and project expected returns for the relevant sectors, based upon internal analysis taking into consideration the impact of the teams' macroeconomic outlook. The macroeconomic outlook is formulated by taking into account the expectations of interest rates, inflation expectations, market sentiment and geo-political issues amongst others.

Securities are then selected by screening the universe of eligible securities within each sector to formulate a "buy" list of actionable opportunities by identifying the individual securities that exhibit the characteristics which the Sub-Investment Manager considers attractive (eg, which are undervalued and higher yielding compared to other securities within the universe) and align with the Portfolio's investment objective and the Maturity Date.

The Sub-Investment Manager will also apply (i) the Global Standards Policy; (ii) the Controversial Weapons Policy; and (iii) the Thermal Coal Involvement Policy when selecting securities. The Sub-Investment Manager systematically considers and evaluates environmental and social characteristics outlined in the "*Environmental, Social and Governance*" ("ESG") section below, as an important component of its credit analysis discipline, when selecting securities.

The Portfolio will predominantly invest in debt securities that mature before the Portfolio's Maturity Date and the Portfolio intends to hold such fixed income securities to maturity. However, the Portfolio may invest up to 20% of its Net Asset Value in fixed income securities with maturity dates that, at the time of their purchase, will extend up to 18 months beyond the Maturity Date. To the extent that proceeds from fixed income securities are received prior to the Portfolio's Maturity Date, the Portfolio may re-invest such amounts in other bonds in line with the Portfolio's investment objective or in cash and cash equivalents (such as U.S. Treasury

securities). As such, as the Portfolio's Maturity Date approaches, the Portfolio will increasingly hold shorter dated securities, cash and cash equivalents and may hold up to 100% in such cash and cash equivalents.

Under normal market conditions, the Sub-Investment Manager anticipates that the Portfolio's average interest rate duration will be +0 to +5 years.

The Portfolio is actively managed; no benchmark is used for performance comparison purposes or as a universe for selection.

---

**Benchmark** N/A

---

**Base Currency** US Dollars (USD).

---

**Instruments / Asset Classes** The Portfolio will invest primarily in debt securities and money market instruments, issued by governments, government agencies and corporate issuers. The Portfolio can invest in or be exposed to the following types of assets.

**Fixed Income Securities (debt securities).** These securities may include:

- Both fixed and floating rate debt securities, including bonds, issued by US and non-US governments, government agencies and corporations worldwide denominated in local currencies;
- Corporate bonds, debentures and notes (freely transferable promissory notes);
- Payment-in-kind bonds (which are bonds that pay interest in the form of additional bonds of the same kind);
- Participation interests in loans (which are securitised and freely transferable); and
- Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities.

The Portfolio may invest up to 3% of its net assets in securities that, at the time of purchase, are issued or guaranteed by a single sovereign issuer that are below investment grade.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**Financial Derivative Instruments ("FDIs").** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, the Portfolio may use the following FDI, for hedging, risk or efficient portfolio management and/or investment purposes. The following FDI may provide exposure to any or all of the asset classes listed above:

- Future contracts may be used to hedge or to gain exposure to an increase in the value of currencies, interest rates, fixed income securities and UCITS eligible bond indices;
- Options on fixed income securities, interest rates and UCITS eligible bond indices may be used to achieve a profit as well as to hedge existing long positions;
- Swaps may include currency swaps, interest rate swaps, fixed income securities swaps, UCITS eligible indices swaps and total return swaps and may be used to achieve a profit as well as to hedge existing long positions, foreign exchange swaps may be used to hedge existing long currency exposures. The maximum proportion of the Portfolio's Net Asset Value that can be subject to total return swaps is 20%. The expected proportion of the Portfolio's Net Asset Value that will be subject to total return swaps is 5%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Forwards on currencies contract may be used to hedge existing long positions; and
- Forward contracts on fixed income securities may be used to achieve a profit, through gaining exposure to an increase in the value of such securities as well as to hedge existing long positions.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets may be invested in the other types of securities listed above. The Sub-Investment Manager may

---

therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return.

The counterparties to OTC FDI entered into in respect of the Portfolio will be entities (which will not be related to the Sub-Investment Manager or its delegates) with legal personality which may be located globally. They will be subject to ongoing supervision by a public authority, be rated at or in excess of the requirements of the Central Bank by a Recognised Rating Agency and have the necessary organisational structure and resources for the relevant type of transaction

**Money Market Instruments.** These securities may include: bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

**Collective Investment Schemes** The Portfolio may invest in underlying funds which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% in underlying funds (including ETFs which are structured as collective investment schemes) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such underlying funds may or may not be managed by the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The underlying funds in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's requirements, which may be domiciled in the European Economic Area and will qualify as UCITS or alternative investment fund schemes and will be regulated as such by their home state regulator.

Underlying funds in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such underlying funds measure their global exposure.

**ETFs.** ETFs are investment funds whose units may be bought and sold on a securities exchange. ETFs typically invest in a portfolio of securities that is designed to track the performance of a particular market segment or index. The ETFs will be located in a Member State of the European Economic Area and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

#### Investment Restrictions

- The Portfolio may invest up to 30% of its Net Asset Value in below investment grade securities.
- The Portfolio may invest up to 10% of its Net Asset Value in participation interests in loans (which are securitised and freely transferable).
- The Portfolio may invest up to, at the time of purchase, 5% of its Net Asset Value in securities that are issued by a single issuer that are investment grade and 3% of its Net Asset Value in securities that are issued by a single issuer that are below investment grade.
- The Portfolio will not invest in debt securities of Emerging Market Countries.
- The Portfolio will not utilise securities lending, repurchase and reverse repurchase agreements, structured products or margin lending.
- The Portfolio may only invest in securities for which both the issuer and the issue that have, at the time of investment, a minimum average weighted credit rating of "B-" or above, based on the Barclays Index methodology, which takes the conservative average of Moody's, S&P, and Fitch ratings.

**Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the risks summarised in the following sections, namely, “Market Risks: Risks relating to Debt Securities” and “Risks related to Financial Derivative Instruments” are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio’s Net Asset Value, as measured using the Commitment Approach, at any time.
- The Sub-Investment Manager will use forward and future currency contracts in order to hedge currency risk on a discretionary basis. The use of such hedging techniques may increase the risk profile of the Portfolio.

**Environmental, Social and Governance (“ESG”)**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.** However, investors should note that, if there is a substantial amount of cash held prior to the Maturity Date and before a decision has been made to close the Portfolio, the Manager will review the Portfolio’s asset allocation and potentially the Portfolio’s SFDR classification to determine if they still remain appropriate.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

**Typical Investor Profile**

The Portfolio may be suitable for investors who are seeking a return over the medium term from exposure primarily to a portfolio of debt securities from issuers worldwide that are held to the Portfolio’s stated Maturity Date of 31 July 2027. Investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept moderate levels of volatility. Investors are likely to hold the Portfolio as a complement to a diversified portfolio and would typically have an investment horizon aligned to the Maturity Date of the Portfolio.

**Fees and Expenses**

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A	5.00%	0.80%	0.00%
I	0.00%	0.40%	0.00%
X	0.00%	0.80%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “*Administration Fees*” heading in the “*Fees and Expenses*” section of the Prospectus.

**SFDR Annex**

**1. NEUBERGER BERMAN DEVELOPED MARKET FMP – 2027**

## SFDR ANNEX

### Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman Developed Market FMP – 2027 (the “**Portfolio**”)

**Legal entity identifier:** 549300GF7EOMWXAHXG64

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

**Yes**    **No**

### What environmental and/or social characteristics are promoted by this financial product?

Given the Portfolio's investment objective, investment term and Maturity Date (31 July 2027), while significant ESG events or changes in the ESG exclusion policies applied by the Portfolio, as described below, in respect of an issuer may result in changes to the Portfolio's holdings, the Portfolio's turnover is likely to be limited. Therefore, while the Portfolio will promote environmental and Social characteristics throughout its lifetime, the promotion of environmental and social characteristics is focused on the portfolio construction phase as the intention of the Sub-Investment Manager is to maintain low turnover.

As part of the portfolio construction phase of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are promoted using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive

the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising, at the point of inception, investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** biodiversity & responsible land usage; carbon footprint reduction; environmental management; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; opportunities in green building; opportunities in renewable energy; responsible raw material sourcing; responsible & transparent underwriting; toxic emissions & waste; waste management; and water management.
- **Social Characteristics:** access to finance; access to medicines; affordability & fair pricing; business ethics & transparency of government relations; chemical safety; community relations; controversial sourcing; corporate behaviour; drug safety & side effects management; ethical marketing & practices; health & nutrition; health & safety; human capital development; labour management; data privacy & security; product safety & quality; and litigation & related controversy.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

Given the Portfolio seeks to provide a yield over a specific term, which ends on the Maturity Date, while significant ESG events or changes in the ESG exclusion policies (described below) in respect of an issuer may result in changes to the Portfolio’s holdings, the Portfolio’s turnover is likely to be limited.

While, the Portfolio will promote environmental and social characteristics throughout its lifetime, the Sub-Investment Manager’s promotion of environmental and social characteristics as well as good governance practices will therefore primarily focus on initial portfolio construction. In order to ensure the characteristics and practices are upheld by the Portfolio’s investments, the Sub-Investment Manager will conduct ongoing ESG engagement with issuers as described below.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

Given the Portfolio’s investment objective, investment term and Maturity Date, while the Portfolio will promote environmental and social characteristics throughout its lifetime, the promotion of environmental and social characteristics is focused on the portfolio construction phase as the intention of the Sub-Investment Manager is to maintain low turnover. As part of the portfolio construction phase of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, are more likely to be removed from the investment universe or divested from the Portfolio. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment.

In addition, the Sub-Investment Manager will endeavour to constructively engage with companies which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's efforts to engage constructively with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement. Due to data limitations, CVaR is not applied across all issuers held by the Portfolio and is instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the "Sustainable Investment Criteria" section of the main body of the Prospectus.

Given the Portfolio seeks to provide a yield over a specific term, which ends on the Maturity Date, while significant ESG events or changes in the ESG exclusion policies, in respect of an issuer may result in changes to the Portfolio's holdings, the Portfolio's turnover is likely to be limited.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

**How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

*How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the ILO Standards, the UNGC Principles and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

<input checked="" type="checkbox"/>	Yes, please see below
<input type="checkbox"/>	No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager utilises third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager’s subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The investment objective of the Portfolio is to seek to maximise current income over the term of the Portfolio, by investing in a diversified mix of global fixed income securities, including high income securities. The Portfolio seeks to achieve its investment objective primarily by investing in debt securities and money market instruments, including through the use of FDI, issued by governments and their agencies and corporations worldwide. Securities will typically be dealt or traded on Recognised Markets (as depicted in Annex I of the Prospectus) globally without any particular focus on any one industrial sector. Securities may be rated investment grade or below by a Recognised Rating Agency or may also be unrated.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

In addition, credit worthiness is complemented by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

### ● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

Given the Portfolio's investment objective, investment term and Maturity Date, while the Portfolio will promote environmental and social characteristics throughout its lifetime, the promotion of environmental and social characteristics is focused on the portfolio construction phase as the intention of the Sub-Investment Manager is to maintain low turnover.

ESG characteristics are considered at three different levels:

#### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is a key component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio, at the point of inception. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to not be included as part of the Portfolio construction.

#### II. Engagement:

The Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process as it allows the Sub-Investment Manager to ensure that its initial assessment of the issuer (at the point of inception) remains accurate and informs the issuer's ongoing NB ESG Quotient rating.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

The Sub-Investment Manager firmly believes this consistent engagement with issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above which places limitations on the investable universe.

For the avoidance of doubt, these binding elements of the investment strategy will continue to be binding throughout the entire lifetime of the Portfolio.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

● ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of corporate issuers. As explained above, the Sub-Investment Manager views this direct engagement with issuers as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at an issuer, or through influence and action to mitigate risks (including sustainability risks).

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging purposes, it will not use derivatives to promote environmental or social characteristics.

### Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

### ● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>?**

Yes:

In fossil gas

In nuclear energy

No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

### ● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of socially sustainable investments?**

N/A - the Portfolio does not commit to holding sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A - The Portfolio does not use a benchmark.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

- **How does the designated index differ from a relevant broad market index?**

N/A

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## METAVERSE SUPPLEMENT

### 6 DECEMBER 2023

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-fund, which is a separate portfolio of the Company:

#### NEUBERGER BERMAN METAVERSE FUND

(the “Portfolio”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to this Portfolio, this Supplement shall prevail. The SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the Portfolio in accordance with SFDR. The SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of the SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>ChinaClear</b>	China Securities Depository and Clearing Corporation Limited;
<b>CSRC</b>	the China Securities Regulatory Commission of the PRC, the government agency responsible for matters relating to securities regulation;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month;
<b>Dealing Deadline</b>	3.00 pm (Irish time) on the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day;
<b>HKSCC</b>	Hong Kong Securities Clearing Company Limited;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine;
<b>Portfolio</b>	the Neuberger Berman Metaverse Fund;
<b>SFDR Annex</b>	the annex hereof setting out the pre-contractual disclosures template with respect to the Portfolio, prepared in accordance with the requirements of Article 8 SFDR;
<b>Shanghai Stock Connect</b>	the Shanghai-Hong Kong Stock Connect program;
<b>Shenzhen Stock Connect</b>	the Shenzhen-Hong Kong Stock Connect program;
<b>Stock Connect</b>	either or both of the Shanghai Stock Connect and the Shenzhen Stock Connect;
<b>SEHK</b>	the Stock Exchange of Hong Kong;
<b>SSE</b>	the Shanghai Stock Exchange;
<b>SZSE</b>	the Shenzhen Stock Exchange; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Asia Limited and Neuberger Berman Investment Advisers LLC or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolio carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

## Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Distributing Classes in the Portfolio shall be declared on an annual basis and paid within 30 Business Days thereafter in relation to the Net Income of the Distributing Classes for the calendar year ended the previous 31 December.

## Subscriptions and Redemptions

Subscriptions for Shares in all Classes will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the Classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Metaverse Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing in financial derivative instruments as described below. The Portfolio will not use FDI extensively or primarily for investment purposes. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

<b>Investment Objective</b>	The Portfolio seeks to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings that are involved in or derive benefit from the growing virtual economy, which is called the “Metaverse”.
-----------------------------	--

<b>Investment Approach</b>	The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors within the Metaverse theme. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.
----------------------------	---

The Portfolio focuses on key enablers and beneficiaries of the emerging Metaverse theme, which describes the development of the next generation of the internet and its related ecosystems including hardware, infrastructure, software, and various user interfaces, with the goal of enabling a network of three dimensional virtual worlds for social connection. The Sub-Investment Manager primarily invests in the following 3 categories of companies within the Metaverse theme, which they believe are poised to benefit from the growing integration between the digital and real worlds, as well as strengthening the supporting environment of this theme:

- 1) Virtual world: Network of content and software instrumental in creating a shared virtual reality environment spanning different industries. This could include companies engaged in entertainment (e.g. gaming and music), consumer goods/retail (e.g. virtual goods and shopping experiences), workplace applications (e.g. collaborative tools and software) and technologies (e.g. visual effects, 3D modelling software and blockchain);
- 2) Physical gateway: Ecosystem of key components and hardware that enable user interface and integration in the tangible world. This could include companies that develop or produce wearable technology (e.g. smart electronics and VR headsets) and components (e.g. sensors, displays and semi-conductors); and
- 3) Infrastructure: Backbone infrastructure to support the development and functioning of the Metaverse. This could include companies engaged in network services (e.g. providing internet connectivity and navigation), in high performance computing (e.g. data centres, edge cloud and chips) and supporting services (e.g. cyber security).

The Portfolio will seek to achieve its objective by investing primarily in equity securities which are issued by companies with innovative technologies or business models that:

- generally derive incremental future earnings or user growth from (a) the development of the virtual world, (b) the physical ecosystem of key components and hardware that feed into the Metaverse and (c) the supporting infrastructure required to build out the Metaverse; or
- are an integral part of the global supply chain related to the Metaverse and thus are major beneficiaries or enablers of the emerging growth related to it.

In seeking to achieve the Portfolio’s investment objective, the Sub-Investment Manager pursues the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to the Metaverse:

- Qualitative business analysis: to identify companies which operate within the long-term trend of the Metaverse, including companies associated with the build out of the virtual world, companies building and enabling technologies designed to grow the physical ecosystem and companies that will build and support the needed infrastructure for a functioning and growing Metaverse.
- Quantitative screening: to (i) identify stocks that the Sub-Investment Manager believes may be too illiquid or have too small a market capitalisation; (ii) identify stocks that have capital appreciation potential over three to five years; and (iii) using the Sub-Investment Manager’s fundamental analysis work to determine investment theses that guide buy and sell decisions.

This analysis includes the preparation of earnings and cash flow models and the evaluation of various valuation statistics (such as Price/Earnings, Price/Cash Flow etc), supported by face-to-face meetings, phone contact with management, discussions with customers, suppliers and competitors and attendance at industry and company conferences and using research from company and industry contacts, regulatory filings, various brokerage relationships and other government and trade sources.

- Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success.
- Creditworthiness is assessed by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.
- Investors should note that this Portfolio seeks to apply the Sustainable Exclusion Policy and the Global Standards Policy as such terms are defined within the "*Sustainable Investment Criteria*" section of the Prospectus. Investors should refer to the information contained in that section and the SFDR Annex for further details about the application of both the Sustainable Exclusion Policy and the Global Standards Policy to the Portfolio.
- The Sub-Investment Manager systematically considers and evaluates ESG characteristics, as an important component of its credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient on a continuous basis, as part of the Portfolio construction and investment management process. Foundational to the NB ESG Quotient is the NB materiality matrix, which identifies the ESG characteristics that are considered to be the most material drivers of ESG risk for each sector. This matrix enables the Sub-Investment Manager to derive the NB ESG Quotient ratings for individual issuers, to compare the sectors and companies in which the Fund invests, relative to environmental and social characteristics. The NB ESG Quotient assigns weightings to issuers (relative to their peer group) for each of the environmental and social characteristics to derive the issuer's NB ESG Quotient rating. The Sub-Investment Manager prioritises investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating over those issued by issuers with a poor NB ESG Quotient rating, especially where such an NB ESG Quotient rating is not being addressed by an issuer. Such securities may be excluded from the Portfolio.

Using this universe, the Sub-Investment Manager further evaluates those companies, seeking to identify companies who are leaders in their industries. The Sub-Investment Manager believes that companies who are leaders in their industries are identified through the quality of their product, technology, processes and market access. The Sub-Investment Manager will review the financial position and results of the companies. In-person management meetings, where possible, are then conducted with members of senior management of the relevant companies to assess financial and operating metrics (e.g. sales growth and product offering) and the quality of the company's management team.

This fundamental research seeks to identify companies with the following characteristics:

- Stock prices which are undervalued relative to long-term cash flow growth potential;
- Industry leadership companies with high market share, pricing power, or better technology/business models relative to peers, or new entrants gaining market share;
- Potential for significant improvement in the company's business (e.g. top line growth greater than market/peers, margin expansion, and/or increased cash flow generation);
- Strong financial characteristics, including growth, margins, and/or capital returns and historic valuations on metrics such as price to cash flow, price to earnings or price to book value; and
- Proven management track record.

The Sub-Investment Manager seeks to reduce risk by building a portfolio typically in a range of 30-60 stocks, which is diversified across countries and economic sectors (within the Metaverse theme). Although, the Sub-Investment Manager has the flexibility to invest a significant portion of the Portfolio's assets in one country, the Sub-Investment Manager generally intends to remain diversified across countries.

The Portfolio may invest directly in China A Shares through Stock Connect and through the qualified foreign investors ("QFI") regime, as described below.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

---

**Benchmark**

The MSCI All-Country World Index (ACWI) (Total Return, net of tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed and emerging markets.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

The Benchmark has not been designated as a reference benchmark for the purposes of SFDR. Therefore, it is not consistent with the promotion of environmental or social characteristics.

---

**Base Currency**

US Dollars (USD).

---

**Instruments /  
Asset Classes**

The Portfolio can invest in or be exposed to the following types of assets, which will be listed or traded on Recognised Markets or, if unlisted, will comply with the Central Bank requirements.

**Equity and Equity-linked Securities.** These securities may include, common stock, preferred stock, convertible bonds, convertible preferred stock and American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property (eg, data centres). The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales. Exposure to REITs may arise when the Sub-Investment Manager identifies opportunities in such securities which are linked to or support Innovative Technologies (such as data centre REITs).

**Participatory Notes ("P-Notes")** which are securities issued by banks or broker-dealers that are designed to replicate the performance of issuers and markets (in which the Portfolio can invest directly) by giving exposure to the performance of specific stocks that the Portfolio may not be able to invest in directly because of local holding restrictions affecting such stocks in the jurisdiction of their issue. The Portfolio shall only invest in listed P-Notes for India, China and Vietnam.

**Financial Derivative Instruments ("FDIs").** FDIs will be used for investment, hedging and/or efficient portfolio management and subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement:

- Warrants and rights may be used to take exposure to equity securities of the type described above.
- Single stock options may be used to take exposure to equity securities of the type described above and UCITS eligible equity index options may be used to hedge or efficiently manage some portions or all of the Portfolio.
- Convertible Bonds and Convertible Preferred Stock. Convertible bonds enable the holder to convert their investment in the bonds into the issuer's common stock at a pre-agreed price and convertible preferred stock enable the holder to convert their investment in the preferred stock into the issuer's common stock at a pre-agreed rate.
- Forward currency contracts may be used to hedge currency risk.

As the Portfolio may purchase FDIs generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to achieve a rate of return greater than the market. The indices utilised for hedging or efficient portfolio management purposes will be broad-based, UCITS-eligible indices which provide exposure to the performance of equities and details of

---

such indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes (including ETFs which are structured as collective investment schemes) which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% of its Net Asset Value in other collective investment schemes which themselves invest in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 200% of their net asset value; (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**ETFs.** ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Fixed Income Securities (Debt Securities).** The Portfolio may invest in debt instruments, such as bonds and notes, issued by corporate or government issuers, which may be rated or unrated (although not more than 10% of NAV will be invested in debt instruments which are rated below investment grade) and may have fixed or floating interest rates and will not embed derivatives.

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under "Collective Investment Schemes" above, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**Repo Contracts.** The Portfolio may use Repo Contracts subject to the conditions and limits set out in the Prospectus.

## Stock Connect

The China Securities Regulatory Commission and the Securities and Futures Commission of Hong Kong have approved programs which establish mutual stock markets access between the PRC and Hong Kong, namely Stock Connect. The Sub-Investment Manager may pursue the Portfolio's investment objective by investing up to 30% of the Portfolio's Net Asset Value directly in certain eligible China A Shares via Stock Connect.

The Shanghai Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SSE. The Shenzhen Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SZSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SZSE.

Each of the Shanghai Stock Connect and Shenzhen Stock Connect comprises a Northbound Trading Link and a Southbound Trading Link. Under the Northbound Trading Link, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions), through their Hong Kong brokers and a securities trading service company established by the SEHK,

---

may trade Eligible Securities listed on the SSE and the SZSE by routing orders to the SSE and the SZSE respectively.

#### Eligible Securities

Among the different types of SSE-or SZSE-listed securities, only China A Shares and ETFs are currently permitted for Northbound trading under Stock Connect.

Currently, Hong Kong and overseas investors are able to trade certain SSE Securities. Eligible securities under the Northbound Trading Link of the Shanghai Stock Connect include all the constituent stocks from time to time of the SSE 180 Index and SSE 380 Index, and all the SSE-listed China A Shares that are not included as constituent stocks of the relevant indices but which have corresponding China H Shares listed on the SEHK, except the following:

- SSE-listed shares which are not traded in CNY; and
- SSE-listed shares which are included in the “risk alert board”.

Eligible Securities under the Northbound Trading Link of the Shenzhen Stock Connect include any constituent stock of the SZSE Component Index and the SZSE Small/Mid Cap Innovation Index which has a market capitalisation of CNY6 billion or above and all SZSE-listed shares of companies which have issued both China A Shares and China H Shares, except the following:

- SZSE-listed shares which are not traded in CNY; and
- SZSE-listed shares which are included in the “risk alert board” or under delisting arrangement.

In addition, Hong Kong and overseas investors are able to trade eligible SSE-listed and SZSE-listed ETFs that satisfy the relevant criteria at a regular review and are accepted as eligible ETFs for Northbound trading under Stock Connect. Regular reviews will be performed to determine the eligible ETFs for Northbound trading every six months.

It is expected that the list of eligible securities will be subject to review and may change from time to time.

If an Eligible Security ceases to be classified as such, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions) will only be allowed to sell holdings of such Eligible Security but will be restricted from buying any more of such Eligible Security.

#### Trading day

Investors (including the Portfolio, subject to its investment approach and restrictions) are only allowed to trade through Stock Connect on days on which both markets are open for trading, and banking services are available in both markets on the corresponding settlement days.

#### Trading quota

Trading under Stock Connect is subject to the Daily Quota. Northbound trading through each Stock Connect is subject to a separate set of Daily Quota. The Daily Quota limits the maximum net buy value of cross-boundary trades under each Stock Connect per day. The SEHK will monitor the quota and publish the remaining balance of the Northbound Daily Quota at scheduled times on the SEHK’s website. The Daily Quota may change from time to time without prior notice and investors should refer to the SEHK’s website and other information published by the SEHK for up-to-date information.

#### Settlement and custody

The HKSCC will be responsible for the clearing, settlement and the provision of depository, nominee and other related services of the trades executed by Hong Kong market participants and investors.

The Eligible Securities traded through Stock Connect are issued in scripless form, so investors do not hold any physical securities. Hong Kong and overseas investors who have acquired Eligible Securities through Northbound trading should maintain the Eligible Securities with their brokers’ or custodians’ stock accounts with CCASS, operated by HKSCC.

#### Corporate actions and shareholders’ meetings

Notwithstanding the fact that the HKSCC does not claim proprietary interests in the Eligible Securities held in its omnibus stock account in ChinaClear, ChinaClear as the share registrar for the Eligible Securities will still treat HKSCC as one of the shareholders when it handles corporate actions in respect of such Eligible Securities.

---

HKSCC monitors the corporate actions affecting Eligible Securities and keeps the relevant brokers or custodians participating in CCASS ("CCASS participants") informed of all such corporate actions that require CCASS participants to take steps in order to participate in them.

SSE and SZSE-listed companies usually announce their annual general meeting / extraordinary general meeting information about one month before the meeting date. A poll is called on all resolutions for all votes. HKSCC will advise CCASS participants of all general meeting details such as meeting date, time, venue and the number of resolutions.

#### Foreign shareholding restrictions

The CSRC stipulates that, when holding China A Shares through Stock Connect, Hong Kong and overseas investors are subject to the following shareholding restrictions:

- Single foreign investors' shareholding by any Hong Kong or overseas investor in a China A Share must not exceed 10% of the total issued shares; and
- Aggregate foreign investors' shareholding by all Hong Kong and overseas investors in a China A Share must not exceed 30% of the total issue shares.

Should the shareholding of a single investor in a China A Share listed company exceed the above restriction, the investor would be required to unwind his position on the excessive shareholding according to a last-in-first-out basis within a specific period. The SSE, the SZSE and the SEHK will issue warnings or restrict the buy orders for the related China A Shares if the percentage of total shareholding is approaching the upper limit.

SSE and SZSE-listed ETFs are not subject to the aforementioned shareholding restrictions.

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities, subject to its investment approach and restrictions.

#### Trading fees and taxes

In addition to paying trading fees and stamp duties in connection with trading of Eligible Securities, the Portfolio may be subject to other fees and taxes concerned with income arising from transfers of stocks or ETFs (if applicable) which are determined by the relevant authorities.

Further information about Stock Connect is available online at the website:

[https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc\\_lang=en](https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc_lang=en)

### **Qualified Foreign Institutional Investors**

The qualified foreign institutional investor program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access to the SSE and SZSE. Under this program, licensed investors can buy and sell CNY-denominated China A Shares, subject to specified quotas that determine the amount of money that the licensed foreign investors are permitted to invest in China's capital markets.

Neuberger Berman Europe Limited received its QFI licence on 3 May 2012.

#### Eligible securities

QFI permitted securities include CNY financial instruments in which QFI are allowed to invest from time to time and which may include (1) stocks, depository receipts, bonds, bond repurchases, and asset-backed securities traded or transferred on stock exchanges; (2) shares and other types of securities transferred on the National Equities Exchange and Quotations (NEEQ); (3) products and derivatives on bonds, interest rates and foreign exchange traded on the domestic inter-bank bond market which are deemed by PBOC as eligible for QFI; (4) investment funds; and (5) other financial instruments as approved by the CSRC.

#### Trading day

Investors (including the Portfolio) are only allowed to trade through the QFI regime on days on which the relevant PRC markets are open for trading, and banking services are available on the corresponding settlement days.

---

#### Currency

Hong Kong and overseas investors will trade and settle eligible securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle eligible securities.

#### QFI status

Neuberger Berman Europe Limited has obtained QFI status. However, under the relevant investment regulations, the QFI status of Neuberger Berman Europe Limited could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFI status of the Sub-Investment Manager is suspended or revoked, the Portfolio may be required to dispose of its securities held through the QFI and may not be able to access the Chinese securities market via the QFI as contemplated in this Supplement, which may have an adverse effect on the Portfolio's performance.

Moreover, the relevant investment regulations generally apply at the QFI level and not simply to investments made on behalf of the Portfolio. Thus investors should be aware that violations of the relevant investment regulations arising out of activities through the QFI other than those conducted by the Portfolio could result in the revocation of or other regulatory action in respect of the QFI as a whole. The regulations relating to the investment restrictions in China A Shares are also generally applied at the QFI level (as discussed in detail below), and the Portfolio may also be impacted by the actions of other investors utilising the QFI status. Hence the ability of the Portfolio to make investments utilising the QFI status of Neuberger Berman Europe Limited may be affected adversely by the investments of other investors utilising the QFI status of Neuberger Berman Europe Limited.

#### Custody

China A Shares traded on the Exchanges are dealt and held in dematerialised form through ChinaClear. Exchange-traded securities purchased on behalf of the Portfolio through the QFI are required to be recorded by ChinaClear as credited to a securities trading account maintained in the joint names of the QFI and the Company (or such other account name as required by the relevant investment regulations which may reference also the Portfolio).

The Company/the QFI expects to receive a legal opinion from a qualified PRC law firm confirming that, as a matter of PRC law, the QFI will have no ownership interest in the securities and that the Portfolio will ultimately and exclusively be entitled to ownership of the securities.

However, given that, pursuant to the relevant investment regulations, the QFI as account-holder will be the party entitled to the securities (albeit that this entitlement does not constitute an ownership interest or preclude the QFI purchasing securities on behalf of the Portfolio), the assets of the Portfolio may not be as well protected as they would be if it were possible for them to be registered and held solely in the name of the Company (or the Portfolio). In particular, given that the QFI belongs to the Neuberger Berman group, there is a risk that creditors of the Neuberger Berman group may incorrectly assume, contrary to the legal opinion referred to, that the Portfolio's assets belong to the Neuberger Berman group and such creditors may seek to gain control of the Portfolio's assets in lieu of such liabilities.

The evidence of title of exchange-traded securities in the PRC consists only of electronic book-entries in the depository and/or registry associated with the relevant Exchange. These arrangements of the depositories and registries are new and not fully tested in regard to their efficiency, accuracy and security.

In order to prevent any trading failure, ChinaClear will automatically settle any trades executed by the PRC securities trading house relating to the securities trading account maintained in the joint names of the Company (or the Portfolio) and the QFI. Accordingly all instructions issued by the PRC securities trading house relating to the securities trading account will be executed without the need of consent or direction of the Depository.

#### Investment restrictions

Investments in the PRC securities market via the QFI are subject to compliance with certain investment restrictions imposed by the relevant investment regulations including the following, which apply to each foreign investor (including the Portfolio) investing through the QFI and will affect the Portfolio's ability to invest in China A Shares and carry out their investment objectives:

- (i) shares held by each underlying foreign investor (such as the Portfolio) which invests (through QFI or other permissible channels) in one PRC listed company should not exceed 10% of the total shares of such company; and
-

- (i) aggregate China A Shares held by all underlying foreign investors (such as the Portfolio and all other foreign investors) which invest (through QFI or other permissible channels) in one PRC listed company should not exceed 30% of the total shares of such company.

Although it has not been explicitly provided under the relevant investment regulations, in practice, the 10% single foreign shareholding restriction is also applied at the QFI level, under which a QFI may not hold 10% or more shares of any listed company, regardless of the fact that such QFI is holding such shares for a number of different clients. Accordingly, as the QFI status of Neuberger Berman Europe Limited is utilised by the Portfolio and other investors as well, the capability of the Portfolio to invest in the shares of certain listed company may be limited due to the investments in the shares of such listed company by other investors who also invest through the QFI status of Neuberger Berman Europe Limited. Specifically, when the shareholding of such other investors in a PRC listed company reaches 10%, the Portfolio may not be able to buy any such shares, even if the then effective price of such shares is advantageous to the Portfolio.

Similarly, since the 30% aggregate foreign shareholding restriction is monitored at the level of all foreign investors, the capability of the Portfolio to invest in China A Shares of certain listed company may also be limited due to the investments made by other foreign investors.

#### Disclosure to CSRC

In practice, structured products issued by QFI to give foreign investors access to China A Shares are required to be reported to CSRC. The information reported may include information on the Portfolio as applicable.

#### Disclosure to the Exchange

According to the relevant investment regulations, where the SSE or the SZSE spots any abnormal trading which may affect the normal trading order, it may request the involved QFI to promptly report the securities transaction and shareholding information of the QFI's relevant underlying investors, which may include information on the Portfolio.

### **Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the *“Investment Restrictions”* section of the Prospectus and the UCITS Regulations.
- The Portfolio may invest up to 30% of its Net Asset Value in China A Shares.
- It is the intention of the Sub-Investment Manager to invest a maximum of 50% of the Portfolio's Net Asset Value in Emerging Market Countries.
- The Portfolio may invest up to 10% of its Net Asset Value in REITs.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

### **Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the *“Investment Risks”* section of the Prospectus. Investors should read and consider the entire *“Investment Risks”* section of the Prospectus, in particular the risks identified in the *“Investment Risks”* section of this Supplement which are relevant to the Portfolio. In particular, investors should note that companies related to the Metaverse may be subject to significant volatility in growth rates due to rapidly changing market conditions and/or participants, more advanced or new technologies, new competing products and/or enhancements in existing products. This is also a highly technical sector, making it heavily dependent on patents and intellectual property rights and/or licences. The profitability of companies related to the Metaverse may be adversely impacted by the loss or impairment of these intellectual property assets. Such companies may also be subject to unpredictable changes in competition. There is no assurance that products or services offered by Metaverse companies will not be rendered obsolete or be adversely affected by competing products, or that such companies will not be adversely affected by other challenges, such as instability, fluctuation, or an overall decline within the industry. As the Portfolio may hold a relatively small number of global equity securities, investors should also consider the *“Concentration Risk”* sub-section of the *“Investment Risks”* section of the Prospectus, which may be relevant to the Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Sub-Investment Manager may use future foreign currency exchange contracts in order to hedge some currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

**Environmental,  
Social and  
Governance  
("ESG")**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and only invests in those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG themed investing is a core component of the Sub-Investment Manager's strategy for the Portfolio. The Sub-Investment Manager applies the: (i) Global Standards Policy; (ii) Controversial Weapons Policy; (iii) Thermal Coal Involvement Policy; and (iv) the Sustainable Exclusion Policy, when determining what investments to make for the Portfolio. Further details on these screening/exclusion policies are set out in the "*Sustainable Investment Criteria*" section of the Prospectus.

The Sub-Investment Manager will manage the Portfolio in accordance with the ESG Policy on a continuous basis. The Sub-Investment Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process. A summary of the ESG Policy is detailed in Annex VI of the Prospectus and it is available on the Neuberger Berman website, [www.nb.com/esg](http://www.nb.com/esg).

As described above and in the "Investment Approach" section, systematic evaluation of material ESG factors is embedded in the investment decision-making process pre- and post-investment and is undertaken for companies within the initial investment universe, which the Sub-Investment Manager follows.

The Sub-Investment Manager also participates in direct engagement with select investee companies (e.g. face-to-face meetings, frequent phone contact with senior management, discussions with customers, suppliers and competitors and attendance at industry and company conferences). Engagement with investee companies is encouraged to mitigate risks and improve ESG and financial outcomes. It is not envisaged that the Sub-Investment Manager will set engagement Key Performance Indicators ("KPIs") for investee companies but failure by issuers to engage with the Sub-Investment Manager or a lack of progress through engagement over time may lead to the Portfolio divesting from issuers' securities. The Sub-Investment Manager views this direct engagement, as an essential part of its investment process.

The ESG criteria considered by the Portfolio may result in the Portfolio forgoing opportunities to buy certain securities when it might otherwise be advantageous to do so and/or selling securities due to their sustainable characteristics when it might not be advantageous to do so. As a result, Sustainability Risks, as defined in the SFDR and the "*Definitions*" section of the Prospectus, if they occur, could cause an actual or a potential material negative impact on the value of an investment for the Portfolio.

Potential risks posed to the Portfolio by Sustainability Risks can be limited through ESG integration and the responsible and proper management of the Portfolio's assets.

The Sub-Investment Manager views ESG integration as the practice of incorporating material ESG risks and considerations (as a binding element) into the investment decision-making process in respect of the Portfolio. ESG integration sits alongside the more traditional financial considerations described in the "*Investment Approach*" section and should enrich the Sub-Investment Manager's analysis of issuers by providing a toolkit for identifying material ESG risks and informing investment decisions for the Portfolio. The Sub-Investment Manager achieves ESG integration through the NB ESG Quotient, which is built around the concept of sector specific ESG risks.

Foundational to the NB ESG Quotient is the NB materiality matrix, which focuses on the ESG characteristics that are considered to be the most material drivers of ESG risk for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics, to avoid

those that pose ESG risks for the Portfolio and to monitor the ESG risks of the issuers held by the Portfolio on an ongoing basis.

The Sub-Investment Manager also aims to limit the potential risk posed by Sustainability Risks through the responsible and proper management of the Portfolio.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors seeking capital appreciation opportunities through equity investments exposed to long-term investment themes. Investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept periods of market volatility particularly over short time periods. Investors are likely to have a medium to long-term investment horizon.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.70%	0.00%
B, C2, E	0.00%	1.70%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.85%	0.00%
M	2.00%	1.70%	0.80%
P	5.00%	0.81%	0.00%
T	5.00%	1.70%	0.00%
U	3.00%	1.28%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
B	4%	3%	2%	1%	0%
C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus.

SFDR Annex

**1. NEUBERGER BERMAN METAVERSE FUND**

SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Metaverse Fund (the “Portfolio”)  
 Legal entity identifier: 549300GQMGS4FDNJD49

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes   No

<input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective:</b> ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective:</b> ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input checked="" type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b>

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses third party data and the NB ESG Quotient to promote the environmental and social characteristics listed below. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.
- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

Third party data and the NB ESG Quotient (as explained above) are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Climate Value-at-Risk:

Climate Value-at-Risk (“CVaR”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Neuberger Berman Sustainable Exclusion Policy is also applied when determining what investments to make for the Portfolio. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

- — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

- — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider more granular data coverage on the PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The Portfolio seeks to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings that are involved in or derive benefit from the growing virtual economy, which is called the “Metaverse”. The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors within the Metaverse theme. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the third party data and the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation (“**EBITDA**”) growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The third party or NB ESG Quotient rating for companies are utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor third party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with companies which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor third party or NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

- **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions.

Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

#### **What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio .

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for investment, hedging and/or efficient portfolio management, it will not use derivatives to promote environmental or social characteristics.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

Yes:

In fossil gas

In nuclear energy

No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of socially sustainable investments?**

N/A – the Portfolio does not commit to holding sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A - The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

- **How does the designated index differ from a relevant broad market index?**

N/A

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## NEUBERGER BERMAN CHINA BOND FUND SUPPLEMENT

**6 DECEMBER 2023**

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-fund, which is a separate portfolio of the Company:

**NEUBERGER BERMAN CHINA BOND FUND**  
(the “Portfolio”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to this Portfolio, this Supplement shall prevail. The SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the Portfolio in accordance with SFDR. The SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of the SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	with respect to the Portfolio, a day (except Saturday or Sunday) on which the relevant financial markets in London, Shanghai, Shenzhen, Singapore, Hong Kong are open for business provided that, if on any such day, the period during which banks in Hong Kong are open for normal trading is reduced as a result of a tropical cyclone warning signal (number 8 or higher), a black rainstorm warning signal or other similar event, such day shall not be a Business Day unless the Directors otherwise determine;
<b>CCDC</b>	China Central Depository & Clearing Co., Ltd;
<b>CFETS</b>	China Foreign Exchange Trade System & National Interbank Funding Centre;
<b>CIBM</b>	China Interbank Bond Market;
<b>CMU</b>	Central Moneymarkets Unit;
<b>CCDC</b>	China Central Depository & Clearing Co., Ltd;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in the Portfolio;
<b>Dealing Deadline</b>	3.00 pm (Irish time) on the Business Day before the relevant Dealing Day in respect of the Portfolio. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day;
<b>HKMA</b>	Hong Kong Monetary Authority;
<b>Investment Adviser</b>	Neuberger Berman Fund Management (China) Limited or such other company as may be appointed by the Manager or a Sub-Investment Manager from time to time in respect of the Portfolio, with the prior approval of the Company;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of the Portfolio;
<b>PBoC</b>	People's Bank of China;
<b>Portfolio SFDR Annex</b>	the Neuberger Berman China Bond Fund;  the annex hereof setting out the pre-contractual disclosures template with respect to the Portfolio, prepared in accordance with the requirements of Article 8 of SFDR;
<b>SHCH</b>	Shanghai Clearing House; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Singapore Pte Limited and Neuberger Berman Investment Advisers LLC, or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolio carries certain risks, which are described below and, in greater detail, in the “*Investment Risks*” section of the Prospectus. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

Investors should refer to the “*Investment Risks*” section of the Prospectus for further information in relation to the risks associated with investing in the Portfolio.

#### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid, notwithstanding the timeframe set out in the “*Distribution Policy*” section of the Prospectus, within five Business Days thereafter;
- each of the (Monthly) Gross Income Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other (Gross) Income Distributing Classes in the Portfolio shall be declared on a quarterly basis and paid within thirty Business Days thereafter; and
- each of the other Distributing Classes of the Portfolio shall be declared on a quarterly basis and paid within 30 Business Days thereafter in relation to the Net Income of the Distributing Classes for the previous quarter.

#### Subscriptions and Redemptions

Subscriptions for Shares in all Classes will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions and Redemptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

Subscriptions in the Portfolio will only be accepted as subscriptions for Shares of a cash value. Subscriptions for specific numbers of Shares will not be accepted.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

Notwithstanding anything to the contrary in the “*Subscriptions and Redemptions*” section of the Prospectus:

- subscription monies in respect of the Portfolio should be sent by wire transfer to the relevant account specified in the subscription application form, or by transfer of assets in accordance with the provisions described below, no later than one (1) Business Day after the relevant Dealing Day;
- redemption proceeds in respect of the Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described under “Temporary Suspension of Dealings” below, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within four (4) Business Days of the relevant Dealing Day); and
- the Portfolio will not be available for exchange. Accordingly, Shareholders may not at any time request the exchange of Shares in the Portfolio for Shares in any other portfolio of the Company, nor may Shareholders request the exchange of Shares in any other portfolio of the Company for Shares in the Portfolio.

Please refer to the “*China PRC QFI Risks*” section of the Prospectus for further information about the QFI regime and potential impact on subscriptions and redemptions.

## Neuberger Berman China Bond Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.**

<b>Investment Objective</b>	<p>The Portfolio aims to achieve a target average return of 3% over the Benchmark (as specified in the “<i>Benchmark</i>” section below) before fees over a market cycle (typically 3 years) by primarily investing in fixed income instruments issued in the Chinese local currency markets.</p> <p>Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.</p>
<b>Investment Approach</b>	<p>The Portfolio will invest primarily in debt securities and money market instruments which are issued within the PRC by PRC government, PRC government agencies or corporate issuers which have their head office or exercise an overriding part of their economic activity in the PRC and which are denominated in or are exposed to the currency of the PRC via the qualified foreign investor (“<b>QFI</b>”) regime, including the Qualified Foreign Institutional Investor (“<b>QFII</b>”) and the Renminbi Qualified Foreign Institutional Investor (“<b>RQFII</b>”) regimes. For the purposes of the Portfolio, investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned. The Portfolio may also invest up to 100% of its Net Asset Value in urban investment bonds, which are debt instruments issued by local government financing vehicles (“<b>LGFVs</b>”), as discussed in greater detail in the “<i>Instruments / Asset Classes</i>” section below. In respect of the Portfolio’s investment in the PRC, the Portfolio (a) may invest up to 100% of its Net Asset Value via the RQFII capacity of Neuberger Berman Singapore Pte. Limited, a Sub-Investment Manager (b) currently does not intend to invest more than 30% of its Net Asset Value via Bond Connect.</p> <p>With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on Recognised Markets globally, without any particular focus on any one industrial sector or region. Securities may be rated investment grade or below investment grade by Recognised Rating Agencies or by domestic rating agencies in the PRC or may be unrated.</p> <p>Under normal market conditions, the Manager and the Sub-Investment Manager will invest at least two thirds of the Portfolio’s Net Asset Value in debt securities, money market instruments and FDI (as detailed in the “<i>Instruments / Asset Classes</i>” section below) with the intention of gaining exposure to the performance of interest rates, credit and/or currency of the PRC. Up to a maximum of one third of the Portfolio’s Net Asset Value may be invested in money market instruments, debt securities and FDI (as detailed in the “<i>Instruments / Asset Classes</i>” section below) issued outside the PRC which are denominated in CNH or Hard Currency (defined for the purpose of this Portfolio as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc). On an ancillary basis, the Portfolio may hold equity securities issued by public or private issuers in the PRC, as a result of the conversion of convertible debt securities or restructuring of debt securities.</p> <p>The Manager and the Sub-Investment Manager implement a systematic and disciplined framework for analysing PRC and Hard Currency debt securities. Decisions on how to allocate the Portfolio’s assets between sovereign, agencies and corporate and PRC and Hard Currency Asian country debt securities, money market instruments and FDI are dependent on the Manager’s and the Sub-Investment Manager’s outlook on such securities. This outlook focuses on the global market environment, the economic environment of the PRC, the attractiveness of the valuations available in the asset classes and their liquidity. From this outlook, the Manager and the Sub-Investment Manager determine the amount of risk that they want the Portfolio to take and seek to allocate across security types accordingly.</p>

Credit analysis of issuers focuses on cash generation, cash flow predictability and event risk analysis, as well as monitoring traditional credit statistics. Issuers that are the best prospects for purchase are subjected to rigorous and thorough business and financial analysis. This analysis is used to form the basis of an investment opinion.

Decisions regarding the interest rate structure of the Portfolio's investments (i.e. the types and diversity of the interest rates which the investments have) are based on the Manager's and the Sub-Investment Manager's outlook for the PRC economy, an in depth valuation of the level and direction of interest rates, the comparison of expectations of inflation which are reflected in bond yields and the prevailing level of inflation and the impact of forecasted levels of real economic activity on inflation expectations.

Central to the investment philosophy is the Manager's and the Sub-Investment Manager's qualitative judgment, which is exercised at all stages of the investment process. This discretion enables them to take into account information and events that cannot be readily quantified, for example political events, shifts in regulatory regimes or the effects of market positioning and hedging.

In order to manage the Portfolio's currency exposures resulting from its investment in debt securities, the Manager and the Sub-Investment Manager may take positions in currencies, through the use of FDI (as detailed in the "*Instruments / Asset Classes*" section below), based on a fundamentally driven, relative value approach which is supported by a quantitative framework of indicators that the Manager and the Sub-Investment Manager use to assess relative value among currencies. Indicators used include, but are not limited to, economic growth, currency stability, yield, monetary policy, capital flows and risk characteristics, over short-, medium- and long-term investment horizons. The Manager and the Sub-Investment Manager believe that the ability to manage the Portfolio's currency exposures actively is a significant factor in the management of the risks associated with the Portfolio's investments, in the context of its investment objective.

The portfolio construction process measures and manages the Portfolio's overall risk profile on an on-going basis so that the Portfolio's investment objective may be achieved.

Under normal market conditions, the Manager and the Sub-Investment Manager anticipate that the Portfolio's:

- Average interest duration will be within the range of 0.5 years and 5 years; and
- Average volatility (a measure of how much the Portfolio's returns may vary over a year) will be within a range of 1-4%.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

<b>Benchmark</b>	<p>FTSE Chinese Government and Policy Bank Bond 0-1 Year Select Index (CNY, Total Return) which measures the performance of CNY-denominated fixed-rate book entry government bonds as well as policy bank bonds issued in Mainland China.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>
<b>Base Currency</b>	CNY.
<b>Instruments / Asset Classes</b>	<p>The Portfolio will invest primarily in debt securities and money market instruments, issued by governments, government agencies and corporate issuers in PRC. The Portfolio can invest in or be exposed to the following types of assets.</p> <p><b>Fixed Income Securities (Debt Securities).</b> These debt securities may include bonds, bonds with warrants, convertible bonds, bonds resulting from the</p>

restructuring of syndicated loans or bank loans (e.g. "Brady" bonds), subordinated bonds, debentures and notes (including freely transferable and unleveraged structured notes and freely transferable promissory notes) and may include:

- Fixed and floating rate securities;
- Bullet debt securities, in respect of which principal is paid upon maturity, or factor debt securities in respect of which principal is paid according to a pre-determined schedule and which can also specify that specific interest payments be added to the principal instead of being paid in cash;
- Investment grade, high yield and unrated debt securities;
- Structured products, such as credit-linked notes and structured notes, which provide indirect access to certain markets or securities;
- On an ancillary basis, privately issued asset-backed securities (including mortgage-backed securities such as pass-through certificates, collateralised mortgage obligations and interest and principal only components of mortgage-backed securities) that derive interest and principal payments from specified assets (such as residential and commercial mortgages, credit card debt and pools of other types of receivables);
- Sukuk structures, which are Islamic finance instruments which represent a proportionate beneficial ownership in an asset or pool of assets. For a determined period, the return associated with the cash flows generated from the assets belongs to the Sukuk holders. The characteristics of a Sukuk are therefore similar to a conventional debt security, with the difference that Sukuks are generally asset-based or asset-backed and carry no interest rate but rather pass the returns generated by the underlying assets to the Sukuk holder; and
- Urban investment bonds issued by LGFVs, which are issued in the PRC Mainland listed bond and interbank bond market and may be rated investment grade or below investment grade by domestic rating agencies in the PRC. These LGFVs are separate legal entities established by local governments and / or their affiliates to raise financing for public welfare investment or infrastructure projects. Although local governments may be seen to be closely connected to urban investment bonds, such bonds are typically not guaranteed by local governments or the central government of the PRC. In this case, investing in urban investment bonds will involve credit risk.

**Money Market Instruments.** Money market instruments may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies or rated AA or above by one or more domestic rating agencies in the PRC, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's other investments. provided that the Portfolio may not invest more than 10% of its Net Asset Value in underlying funds (including ETFs which are structured as collective investment schemes) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such underlying funds may or may not be managed by the Manager and/or the Sub-Investment Manager or its affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The underlying funds in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's requirements, which may be domiciled in a Relevant Jurisdiction and will qualify as UCITS or alternative investment fund schemes and will be regulated as such by their home state regulator.

Underlying funds in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such underlying funds measure their global exposure.

ETFs are investment funds whose units may be bought and sold on a securities exchange. ETFs typically invest in a portfolio of securities that is designed to track the performance of particular market segment or index. The ETFs will be located in a Relevant Jurisdiction and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Financial Derivative Instruments ("FDIs").** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement, the Portfolio may use, the following FDI may be used for hedging, efficient portfolio management and/or investment purposes and subject to the conditions and limits imposed by the Central Bank as set out in this Prospectus:

- Futures, options, warrants, rights, swaps and swaptions on debt securities or money market instruments, interest rates and UCITS eligible indices, which may be used to achieve a profit through gaining exposure to an increase in the value of such securities, indices and interest rates, as well as to hedge existing long positions;
- Total return swaps may be used to hedge or take long or short positions to help achieve specific investment objectives. In addition, total return swaps may be used to achieve a profit through gaining exposure to an increase in the value of securities, indices and interest rates. The maximum proportion of the Portfolio's Net Asset Value that can be subject to total return swaps is 10%. The expected proportion of the Portfolio's Net Asset Value that will be subject to total return swaps is 1%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Credit default swaps on single issuers, UCITS eligible indices and/or baskets of securities which may be used to hedge or take long or short credit positions to help achieve specific investment objectives. It is expected that short credit positions will predominantly be taken for hedging but they may also be used for investment purposes where the Manager and the Sub-Investment Manager identify an attractive investment opportunity based on the Manager's and the Sub-Investment Manager's fundamental analysis which indicates deteriorating fundamentals of an issuer and/or that a security is overvalued;
- Forward currency contracts and interest rate swaps may be used to take short currency positions;
- Interest rate swaps may be used to take short positions on interest rates; and
- Forward and non-deliverable forward currency contracts, currency futures contracts and transactions, currency options, and currency swaps, which may be used to achieve a profit through gaining exposure to an increase in the value of currencies, as well as to hedge existing long currency positions.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Manager and the Sub-Investment Manager may be invested in the other types of securities listed above. The Manager and the Sub-Investment Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return.

**Repo Contracts.** At the discretion of the Manager and the Sub-Investment Manager, the Portfolio will enter into Repo Contracts subject to the conditions and limits set out in the Central Bank UCITS Regulations and the Prospectus. Any such Repo Contracts may be used for efficient portfolio management purposes.

Notwithstanding the terms of the Prospectus, the maximum proportion of the Portfolio's Net Asset Value that can be subject to Repo Contracts is 90%. The expected proportion of the Portfolio's Net Asset Value that will be subject to Repo Contracts is 60%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions.

## Bond Connect

The PBoC and the HKMA have approved the CFETS, CCDC, SHCH, together with Hong Kong Exchanges and Clearing Limited and CMU to launch Bond Connect, which is a mutual bond market access programme between Mainland China and Hong Kong. Bond Connect allows investors to trade electronically between the Mainland China and Hong Kong bond markets without quota restrictions and requirements to identify the ultimate investment amount.

Currently, Bond Connect comprises a Northbound Trading Link between CFETS, the operator of the CIBM and offshore trading access platforms recognised by the PBoC, to facilitate investment by Hong Kong and overseas investors (including the Portfolio) in eligible bonds traded on the CIBM. A Southbound Trading Link, facilitating investment in overseas bond markets by Mainland Chinese investors is still under development but is intended to form part of Bond Connect once established.

### Eligible Securities

Hong Kong and overseas investors (including the Portfolio) will be able to trade over the entire range of instruments traded on the CIBM, including products on both the secondary and primary markets.

### Trading Day

Northbound investors (including the Portfolio) are able to trade through Bond Connect on days upon which the CIBM is open to trade, regardless of whether they are a public holiday in Hong Kong.

### Settlement and Custody

Settlement and custody of Northbound bond trades under Bond Connect will be implemented under the link between the CMU of the HKMA and Mainland China's two bond settlement systems, namely, CCDC and SHCH. The CMU settles Northbound trades and holds the CIBM bonds on behalf of its members in nominee accounts with each of CCDC and SHCH. CCDC and SHCH provide services to foreign investors, directly and indirectly, using Bond Connect.

Bonds purchased by Hong Kong and overseas investors (including the Portfolio) are recorded in an omnibus nominee account at CCDC and SHCH in the name of CMU. The CMU itself maintains the bonds in segregated sub-accounts of its members, who in turn may hold the bonds on their own account or on behalf of other investors or custodians. Accordingly, bonds purchased by Hong Kong and overseas purchasers through Bond Connect are held by the purchaser's global or local custodian in a segregated sub-account opened in their name at the CMU.

### Currency

Hong Kong and overseas investors may trade through Bond Connect using offshore RMB (CNH) or by converting foreign currencies into onshore RMB (CNY) under Bond Connect.

Where an investor uses foreign currencies to invest through the Northbound Trading Link, it must open a segregated RMB capital account with an eligible RMB settlement Bank in Hong Kong to convert its foreign currencies into CNY. Where bonds are purchased in CNY in this manner, upon sale of the bonds, the sale proceeds remitted out of Mainland China must be converted back into the relevant foreign currencies.

Further information about Bond Connect is available at:

<http://www.chinabondconnect.com/en/index.htm>

## Investment Restrictions

- A maximum of one third of the Portfolio's Net Asset Value may be invested in securities issued outside PRC which are denominated in CNH or Hard Currency

(defined for the purpose of this Portfolio as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc).

- A maximum of 40% of the Portfolio's Net Asset Value may be invested in non-investment grade securities rated by Recognised Rating Agencies or domestic rating agencies in the PRC. For avoidance of doubt, the Manager and the Sub-Investment Manager may internally assign an unrated debt security the credit rating of its issuer as provided by Recognised Rating Agencies or domestic rating agencies in the PRC at the time of investment, if available. If the issuer credit rating is also not available, the Manager and the Sub-Investment Manager may assign its own internal rating.
- The Portfolio will not utilise securities lending or margin lending.

## Risk

- The Portfolio is expected to be leveraged up to 200% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced. This expected leverage figure is calculated using the Sum of the Notionals of the derivatives used, as required by the Central Bank. Using this methodology does not reflect any netting or hedging that the Portfolio may have in place. The Portfolio's global exposure is subject to an advanced risk management process which, in compliance with the UCITS Regulations, aims to ensure that on any day the Absolute VaR of the Portfolio will be no greater than 4.47% of its Net Asset Value (or a maximum 20% over 1 Month). The VaR of the Portfolio is a daily estimation of the maximum loss which the Portfolio may incur over a 20 Business Day holding period and is arrived at through quantitative simulations with a 99% one tailed confidence interval and using an historical observation period of at least 250 business days. This process is described in detail in the statement of risk management procedures of the Company and its appendix in respect of the Portfolio. While the Portfolio measures and monitors its global exposure using the VaR approach, rather than by use of the Commitment Approach, the leverage of the Portfolio using the Commitment Approach is expected to be 140% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced.
- The Manager and the Sub-Investment Manager will take a disciplined approach to investing on behalf of the Portfolio by attempting to maintain a portfolio that is typically diversified.
- The Manager and the Sub-Investment Manager will use forward currency contracts in order to hedge currency risk.
- Investors should refer to the "*Investment Restrictions*", "*Investment Risks*" and "*Risks Associated with Investment in the China Interbank Bond Market through Bond Connect*" sections for information in relation to the risks of investing in mainland China, risks associated with the use of derivative instruments and the Company's risk management policy with respect to FDI contained in the RMP Statement.

## Environmental, Social and Governance ("ESG")

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are systematically considered in the selection of securities to be constituents of the Portfolio. The Manager and the Sub-Investment Manager assess securities in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

## Typical Investor Profile

The Portfolio seeks to give access to China bond markets by investing in Chinese debt securities and may be suitable for investors who are seeking a total return (capital appreciation and income) through fixed income investments. Investors need to be comfortable with the risks associated with investment in debt securities within the Greater China region and be prepared to accept periods of market volatility,

particularly over short term periods. In addition investors need to be comfortable with the risks associated with the use of FDI. Investors are likely to hold the Portfolio as a compliment to a diversified portfolio and should have a medium or long-term investment horizon. The Portfolio may or may be expected to have medium to high levels of volatility due to its investment policies or portfolio management techniques.

### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.30%	0.00%
B, C2, E	0.00%	1.30%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	0.85%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.65%	0.00%
M	2.00%	1.30%	0.80%
P	5.00%	0.62%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	0.95%	0.00%
Z	0.00%	0.00%	0.00%

For the details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C, C1</b>	1%	0%	0%	0%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus.

**SFDR Annex**

**Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman China Bond Fund (the “Portfolio”)  
**Legal entity identifier:** 54930013S2HFIMB3V932

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<p><input checked="" type="radio"/> <input type="radio"/> <b>Yes</b></p> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective</b>: ___%</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective</b>: ___%</p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b></p> <p><input type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul> <p><input checked="" type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Manager and the Sub-Investment Manager consider a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

The Manager and the Sub-Investment Manager use the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities issued by issuers with a favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Manager and the Sub-Investment Manager will limit exposure to issuers with the poorest NB ESG Quotient ratings unless there is a reasonable expectation that the NB ESG Quotient rating will improve over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating for corporate issuers:

- **Environmental Characteristics:** biodiversity and land usage; carbon emissions; opportunities in clean technologies; water stress; toxic emissions & waste; financing environmental impact; product carbon footprint; environmental policy; environmental management system; greenhouse gas (“**GHG**”) reduction programme; green procurement policy; and non-GHG air emissions programmes.
- **Social Characteristics:** health & safety; human capital development; labour management; privacy & data security; product safety & quality; financial products safety; discrimination policy; community involvement programmes; diversity programmes; and human rights policy.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB ESG Quotient methodology will evolve over time and all ESG characteristics included therein are reviewed regularly and are subject to annual review to ensure that the most pertinent sector specific ESG characteristics are captured. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

As part of the investment process, the Manager and the Sub-Investment Manager consider a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for corporate sectors to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, are more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Manager and the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Manager and the Sub-Investment Manager deem as weak ESG efforts, are being addressed adequately. The success of both the Manager's and the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

II. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. The Portfolio is phasing out its exposure to thermal coal and currently prohibits investment in securities issued by issuers that derive more than 10% of revenue from thermal coal mining or are expanding new thermal coal power generation, as determined by internal screens. The Portfolio also prohibits investments in issuers in the power generation industry that use thermal coal as an energy source for more than 95% of their installed power generation capacity, are expanding into new thermal coal power generation, or whose expansionary capital expenditure budgets do not include a minimum threshold for non-coal investments, as determined by internal screens. The investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. In addition, the Portfolio excludes securities issued by issuers which are involved in direct child labour, in the tobacco industry, as well as certain issuers with significant exposure to oil sands. Further details on these ESG exclusion policies are set out in the "Sustainable Investment Criteria" section of the main body of the Prospectus.

The Manager and the Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; and (ii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

— — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

— — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Manager and the Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio does not commit to holding Taxonomy-aligned investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## Does this financial product consider principal adverse impacts on sustainability factors?

- Yes, please see below
- No

The Manager and the Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

With respect to the Product Level PAIs, the Manager and the Sub-Investment Manager utilise third party data and proxy data along with internal research to consider them.

Additionally, the Manager and the Sub-Investment Manager have conducted a letter campaign where they have written to select corporate issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Manager and the Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Manager's and the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Manager and the Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Manager and the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance set for each Product Level PAI by the Manager and the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Manager and the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The investment objective of the Portfolio is to achieve a target average return of 3% over the benchmark, FTSE Chinese Government and Policy Bank Bond 0-1 Year Select Index (CNY, Total Return), before fees over a market cycle (typically 3 years) by primarily investing in fixed income instruments issued in the Chinese local currency markets.

The Portfolio will invest primarily in debt securities and money market instruments which are issued within the PRC by PRC government, PRC government agencies or corporate issuers which have their head office or exercise an overriding part of their economic activity in the PRC and which are denominated in or are exposed to the currency of the PRC via the qualified foreign investor (“**QFI**”) regime, including the Qualified Foreign Institutional Investor (“**QFII**”) and the Renminbi Qualified Foreign Institutional Investor (“**RQFII**”) regimes. For the purposes of the Portfolio, investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned. The Portfolio may also invest up to 100% of its Net Asset Value in urban investment bonds, which are debt instruments issued by local government financing vehicles (“**LGFVs**”), as discussed in greater detail in the “Instruments / Asset Classes” section below. In respect of the Portfolio's investment in the PRC, the Portfolio (a) may invest up to 100% of its Net Asset Value via the RQFII capacity of Neuberger Berman Singapore Pte. Limited, a Sub-Investment Manager (b) currently does not intend to invest more than 30% of its Net Asset Value via Bond Connect.

With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on Recognised Markets (as depicted in Annex I of the prospectus) globally, without any particular focus on any one industrial sector or region. Securities may be rated investment grade or below investment grade by Recognised Rating Agencies or by domestic rating agencies in the PRC or may be unrated.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The Manager and the Sub-Investment Manager implement a systematic and disciplined framework for analysing PRC and hard currency debt securities. Decisions on how to allocate the Portfolio's assets between sovereign, agencies and corporate and PRC and hard currency Asian country debt securities, money market instruments and FDI are dependent on the Manager's and the Sub-Investment Manager's outlook on such securities. This outlook focuses on the global market environment, the economic environment of the PRC, the attractiveness of the valuations available in the asset classes and their liquidity. From this outlook, the Manager and the Sub-Investment Manager determine the amount of risk that they want the Portfolio to take and seek to allocate across security types accordingly.

Credit analysis of issuers focuses on cash generation, cash flow predictability and event risk analysis, as well as monitoring traditional credit statistics. Issuers that are the best prospects for purchase are subjected to rigorous and thorough business and financial analysis. This analysis is used to form the basis of an investment opinion.

Decisions regarding the interest rate structure of the Portfolio's investments (i.e. the types and diversity of the interest rates which the investments have) are based on the Manager's and the Sub-Investment Manager's outlook for the PRC economy, an in depth valuation of the level and direction of interest rates, the comparison of expectations of inflation which are reflected in bond yields and the prevailing level of inflation and the impact of forecasted levels of real economic activity on inflation expectations. The Manager and the Sub-Investment Manager consider and evaluate ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Manager and the Sub-Investment Manager utilise the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is a key component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Manager and the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

II. Engagement:

The Manager and the Sub-Investment Manager engage directly with management teams of issuers through a robust ESG engagement program.

The Manager and the Sub-Investment Manager view this direct engagement with issuers, as an important part of its investment process (including the investment selection process). Issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings, email and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of issuers. As part of the direct engagement process, the Manager and the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same are monitored and tracked by the Manager and the Sub-Investment Manager through an internal Neuberger Berman ("NB") engagement tracker.

In addition, the Manager and the Sub-Investment Manager will seek to prioritise constructive engagement with companies which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient or third party rating, in order to assess whether those ESG controversies or what the Manager and the Sub-Investment Manager deem as weak ESG efforts, are being addressed adequately.

The Manager and the Sub-Investment Manager firmly believe this consistent engagement with issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Manager and the Sub-Investment Manager also use it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

● ***What is the policy to assess good governance practices of the investee companies?***

The governance factors that the Manager and the Sub-Investment Manager track for corporate and quasi-sovereign issuers may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

Engagement with management is an important component of the Portfolio's investment process, and the Manager and the Sub-Investment Manager engage directly with management teams of issuers through a robust ESG engagement program. This program is focused on in-person meetings, email and conference calls to understand risks, opportunities and assess good corporate governance practices of corporate issuers. The Manager and the Sub-Investment Manager view this direct engagement with issuers, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Manager and the Sub-Investment Manager aim to prioritise engagement that is expected, based on the Manager and the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at an issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Manager and the Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the 'other' section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Manager and the Sub-Investment Manager feel will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Manager and the Sub-Investment Manager do not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Manager and the Sub-Investment Manager aim to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Manager and the Sub-Investment Manager have calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. This calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

### ● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for hedging, efficient portfolio management and/or investment purposes, it will not use derivatives to promote environmental or social characteristics.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Manager and Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Manager and Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Manager and the Sub-Investment Manager will amend the minimum Taxonomy alignment of the Portfolio.

### ● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

Yes:

In fossil gas

In nuclear energy

No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

### ● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of socially sustainable investments?**

N/A– the Portfolio does not commit to holding sustainable investments.

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Manager and the Sub-Investment Manager feel will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager and the Sub-Investment Manager believe that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

- **How does the designated index differ from a relevant broad market index?**

N/A

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in London, Hong Kong and New York are open for business provided that, if on any such day, the period during which banks in Hong Kong are open for normal trading is reduced as a result of a tropical cyclone warning signal (number 8 or higher), a black rainstorm warning signal or other similar event, such day shall not be a Business Day unless the Directors otherwise determine;
<b>ChinaClear</b>	China Securities Depository and Clearing Corporation Limited;
<b>CSRC</b>	the China Securities Regulatory Commission of the PRC, the government agency responsible for matters relating to securities regulation;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month;
<b>Dealing Deadline</b>	3.00 pm (Irish time) on the relevant Dealing Day. In exceptional circumstances a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day;
<b>HKSCC</b>	Hong Kong Securities Clearing Company Limited;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine;
<b>Portfolio</b>	the Neuberger Berman Climate Innovation Fund;
<b>SFDR Annex</b>	the annex hereto setting out the pre-contractual disclosures template with respect to the Portfolio, prepared in accordance with the requirements of Article 8 of SFDR;
<b>Shanghai Stock Connect</b>	the Shanghai-Hong Kong Stock Connect program;
<b>Shenzhen Stock Connect</b>	the Shenzhen-Hong Kong Stock Connect program;
<b>Stock Connect</b>	either or both of the Shanghai Stock Connect and the Shenzhen Stock Connect;
<b>SEHK</b>	the Stock Exchange of Hong Kong;
<b>SSE</b>	the Shanghai Stock Exchange;
<b>SZSE</b>	the Shenzhen Stock Exchange; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited and Neuberger Berman Investment Advisers LLC or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolio carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

#### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the (Monthly) Gross Income Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Gross Income Distributing Classes in the Portfolio shall be declared on a quarterly basis and paid within 30 Business Days thereafter; and
- each of the other Distributing Classes in the Portfolio will be declared on a quarterly basis and paid within 30 Business Days thereafter.

#### Subscriptions and Redemptions

Subscriptions for Shares in all Classes will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the Classes shall be as follows:

AUD Classes: AUD 10

BRL Classes: BRL 20

CAD Classes: CAD 10

CHF Classes: CHF 10

CLP Classes: CLP 5,000

CNY Classes: CNY 100

DKK Classes: DKK 50

EUR Classes: EUR 10

GBP Classes: GBP 10

HKD Classes: HKD 10

ILS Classes: ILS 30

JPY Classes: JPY 1,000

NOK Classes: NOK 100

NZD Classes: NZD 10

SEK Classes: SEK 100

SGD Classes: SGD 20

USD Classes: USD 10

ZAR Classes: ZAR 100

Thereafter Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Climate Innovation Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing in financial derivative instruments as described below. The Portfolio will not use FDI extensively or primarily for investment purposes. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

**Investment Objective**

The Portfolio seeks to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings, focusing on companies that are involved in or derive benefit from climate innovation related technologies and/or activities.

**Investment Approach**

The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation.

The Portfolio focusses on companies involved in the design, manufacture or sale of products or services that provide technologies or solutions which enable decarbonisation through greenhouse gas reduction or contribute to accelerating a path towards a low-carbon economy (“**Climate Innovation**”). The Portfolio will invest in companies involved in (but not limited to) energy/battery storage, renewable energy, hydrogen energy, smart grids, electric vehicles, green buildings, low-carbon products, biomaterials, industrial automation, clean water, recycling and waste reduction, carbon capture, environmental monitoring and methanation (the conversion of carbon gases into methane for use as a fuel or means of energy storage).

The Portfolio will seek to achieve its objective by investing primarily in equity securities which are issued by companies that demonstrate:

- thematic purity, assessed by conducting bottom-up work, based on engagement with management teams, company filings, industry data and other sources. Holdings with thematic purity are defined as those with at least 50% of incremental earnings/revenue growth or capex aligned with Climate Innovation related activities;
- potential for reduction in greenhouse gas (“**GHG**”) emissions, to enable the Portfolio to achieve its net-zero goal (as detailed further in the “*Environmental, Social and Governance*” section below);
- strong financial characteristics, including growth, margins, and/or capital returns and historic valuations on metrics such as price to cash flow, price to earnings or price to book value;
- industry leadership, through high market share, pricing power, or better technology/business models relative to peers, or new entrants gaining market share; and
- proven management track record.

The Sub-Investment Manager will pursue the following investment process to identify a universe of companies that offer exposure to Climate Innovation related activities:

- The Sub-Investment Manager applies the Sustainable Exclusion Policy, the Enhanced Sustainable Exclusion Policy, the Controversial Weapons Policy, the Thermal Coal Involvement Policy, and the Global Standards Policy, as such terms are defined within the “*Sustainable Investment Criteria*” section of the Prospectus. Investors should refer to the information contained in that section for further details about the application of these policies.
- The Sub-Investment Manager systematically considers and evaluates ESG characteristics, as an important component of its investing discipline, when making investment decisions. The Sub-Investment Manager utilises a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) on a continuous basis, as part of the Portfolio construction and investment management process. Please see the SFDR Annex for further details regarding the application of the NB ESG Quotient to the Portfolio.
- Thematic purity: to identify companies which operate within the long-term trend of Climate Innovation where >50% of incremental earnings/revenue growth or capital expenditure is

derived from Climate Innovation themes.

- Stock-specific analysis: to (i) identify stocks that they believe may not have adequate liquidity or have too small a market capitalisation, which would not be suitable for the portfolio; (ii) identify stocks that have capital appreciation potential over three to five years; and (iii) using the Sub-Investment Manager's fundamental analysis work to guide buy and sell decisions. This last step includes in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success. In-person management meetings, where possible, are then conducted with members of senior management of the relevant companies to further assess financial and operating metrics (e.g. sales growth and product offering) and the quality of the company's management team.

The Sub-Investment Manager seeks to reduce risk by building a portfolio typically in a range of 30-60 stocks, which is diversified across countries and economic sectors. Although the Sub-Investment Manager has the flexibility to invest a significant portion of the Portfolio's assets in one country, the Sub-Investment Manager generally intends to remain diversified across countries.

The Portfolio may invest directly in China A Shares through Stock Connect and through the qualified foreign investors ("QFI") regime, as described below.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

<b>Benchmark</b>	<p>The MSCI All-Country World Index (ACWI) (Total Return, net of tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed and emerging markets.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p> <p>The Benchmark has not been designated as a reference benchmark for the purposes of SFDR. Therefore, it is not consistent with the promotion of environmental or social characteristics.</p>
------------------	--

<b>Base Currency</b>	US Dollars (USD).
----------------------	-------------------

<b>Instruments / Asset Classes</b>	<p>The Portfolio can invest in or be exposed to the following types of assets, which will be listed or traded on Recognised Markets or, if unlisted, will comply with the Central Bank requirements.</p> <p><b>Equity and Equity-linked Securities.</b> These securities may include, without limitation, common stock, preferred stock, convertible preferred stock, American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution, and recently issued securities of the types described above, which are unlisted but have been issued with an undertaking to apply for admission to listing on a Recognised Market within a year of issue.</p> <p><b>Equity Real Estate Investment Trusts ("REITs").</b> REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property (eg, data centres). The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales. Exposure to REITs may arise when the Sub-Investment Manager identifies opportunities in such securities which are linked to or support Climate Innovation.</p> <p><b>Financial Derivative Instruments ("FDIs").</b> FDIs will be used for investment, hedging and/or efficient portfolio management and subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement:</p> <ul style="list-style-type: none"> <li>• Warrants and rights may be used to take exposure to equity securities of the type described above.</li> <li>• Single stock options may be used to take exposure to equity securities of the type described above and UCITS eligible equity index options may be used to hedge or efficiently manage</li> </ul>
------------------------------------	---

some portions or all of the Portfolio.

- Convertible Preferred Stock. Convertible preferred stock enable the holder to convert their investment in the preferred stock into the issuer's common stock at a pre-agreed rate.
- Forward currency contracts may be used to hedge currency risk.

As the Portfolio may purchase FDIs generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to achieve a rate of return greater than the market. The indices utilised for hedging or efficient portfolio management purposes will be broad-based, UCITS-eligible indices which provide exposure to the performance of equities and details of such indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes (including ETFs which are structured as collective investment schemes) which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% of its Net Asset Value in other collective investment schemes which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 200% of their net asset value; (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**ETFs.** ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under "Collective Investment Schemes" above, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**Repo Contracts.** The Portfolio may use Repo Contracts subject to the conditions and limits set out in the Prospectus.

### Stock Connect

The China Securities Regulatory Commission and the Securities and Futures Commission of Hong Kong have an approved program which establishes mutual stock markets access between the PRC and Hong Kong, namely Stock Connect. The Sub-Investment Manager may pursue the Portfolio's investment objective by investing up to 30% of the Portfolio's Net Asset Value directly in certain eligible China A Shares via Stock Connect.

The Shanghai Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SSE and ChinaClear, with the aim of achieving mutual stock market access between the

SEHK and the SSE. The Shenzhen Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SZSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SZSE.

Each of the Shanghai Stock Connect and Shenzhen Stock Connect comprises a Northbound Trading Link and a Southbound Trading Link. Under the Northbound Trading Link, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions), through their Hong Kong brokers and a securities trading service company established by the SEHK, may trade Eligible Securities listed on the SSE and the SZSE by routing orders to the SSE and the SZSE respectively.

#### Eligible Securities

Among the different types of SSE-or SZSE-listed securities, only China A Shares and ETFs are currently permitted for Northbound trading under Stock Connect.

Currently, Hong Kong and overseas investors are able to trade certain SSE Securities. Eligible Securities under the Northbound Trading Link of the Shanghai Stock Connect include all the constituent stocks from time to time of the SSE 180 Index and SSE 380 Index, and all the SSE-listed China A Shares that are not included as constituent stocks of the relevant indices but which have corresponding China H Shares listed on the SEHK, except the following:

- SSE-listed shares which are not traded in CNY; and
- SSE-listed shares which are included in the “risk alert board”.

Eligible Securities under the Northbound Trading Link of the Shenzhen Stock Connect include any constituent stock of the SZSE Component Index and the SZSE Small/Mid Cap Innovation Index which has a market capitalisation of CNY6 billion or above and all SZSE-listed shares of companies which have issued both China A Shares and China H Shares, except the following:

- SZSE-listed shares which are not traded in CNY; and
- SZSE-listed shares which are included in the “risk alert board” or under delisting arrangement.

In addition, Hong Kong and overseas investors are able to trade eligible SSE-listed and SZSE-listed ETFs that satisfy the relevant criteria at a regular review and are accepted as eligible ETFs for Northbound trading under Stock Connect. Regular reviews will be performed to determine the eligible ETFs for Northbound trading every six months.

It is expected that the list of Eligible Securities will be subject to review and may change from time to time.

If an Eligible Security ceases to be classified as such, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions) will only be allowed to sell holdings of such Eligible Security but will be restricted from buying any more of such Eligible Security.

#### Trading day

Investors (including the Portfolio, subject to its investment approach and restrictions) are only allowed to trade through Stock Connect on days on which both markets are open for trading, and banking services are available in both markets on the corresponding settlement days.

#### Trading quota

Trading under Stock Connect is subject to the Daily Quota. Northbound trading through each Stock Connect is subject to a separate set of Daily Quota. The Daily Quota limits the maximum net buy value of cross-boundary trades under each Stock Connect per day. The SEHK will monitor the quota and publish the remaining balance of the Northbound Daily Quota at scheduled times on the SEHK’s website. The Daily Quota may change from time to time without prior notice and investors should refer to the SEHK’s website and other information published by the SEHK for up-to-date information.

#### Settlement and custody

The HKSCC will be responsible for the clearing, settlement and the provision of depository, nominee and other related services of the trades executed by Hong Kong market participants and investors.

The Eligible Securities traded through Stock Connect are issued in scripless form, so investors do not hold any physical securities. Hong Kong and overseas investors who have acquired Eligible Securities through Northbound trading should maintain the Eligible Securities with their brokers’ or custodians’ stock accounts with CCASS, operated by HKSCC.

Corporate actions and shareholders' meetings

Notwithstanding the fact that the HKSCC does not claim proprietary interests in the Eligible Securities held in its omnibus stock account in ChinaClear, ChinaClear as the share registrar for the Eligible Securities will still treat HKSCC as one of the shareholders when it handles corporate actions in respect of such Eligible Securities.

HKSCC monitors the corporate actions affecting Eligible Securities and keeps the relevant brokers or custodians participating in CCASS ("CCASS participants") informed of all such corporate actions that require CCASS participants to take steps in order to participate in them.

SSE and SZSE-listed companies usually announce their annual general meeting / extraordinary general meeting information about one month before the meeting date. A poll is called on all resolutions for all votes. HKSCC will advise CCASS participants of all general meeting details such as meeting date, time, venue and the number of resolutions.

Foreign shareholding restrictions

The CSRC stipulates that, when holding China A Shares through Stock Connect, Hong Kong and overseas investors are subject to the following shareholding restrictions:

- Single foreign investors' shareholding by any Hong Kong or overseas investor in a China A Share must not exceed 10% of the total issued shares; and
- Aggregate foreign investors' shareholding by all Hong Kong and overseas investors in a China A Share must not exceed 30% of the total issue shares.

Should the shareholding of a single investor in a China A Share listed company exceed the above restriction, the investor would be required to unwind his position on the excessive shareholding according to a last-in-first-out basis within a specific period. The SSE, the SZSE and the SEHK will issue warnings or restrict the buy orders for the related China A Shares if the percentage of total shareholding is approaching the upper limit.

SSE and SZSE-listed ETFs are not subject to the aforementioned shareholding restrictions.

Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities, subject to its investment approach and restrictions.

Trading fees and taxes

In addition to paying trading fees and stamp duties in connection with trading of Eligible Securities, the Portfolio may be subject to other fees and taxes concerned with income arising from transfers of stocks or ETFs (if applicable) which are determined by the relevant authorities.

Further information about Stock Connect is available online at the website:

[https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc\\_lang=en](https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc_lang=en)

---

**Qualified  
Foreign  
Investors**

The qualified foreign institutional investor program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access to the SSE and SZSE. Under this program, licensed investors can buy and sell CNY-denominated China A Shares, subject to specified quotas that determine the amount of money that the licensed foreign investors are permitted to invest in China's capital markets.

Neuberger Berman Europe Limited received its QFI licence on 3 May 2012.

Eligible Securities

QFI permitted securities include CNY financial instruments in which QFI are allowed to invest from time to time and which may include (1) stocks, depository receipts, bonds, bond repurchases, and asset-backed securities traded or transferred on stock exchanges; (2) shares and other types of securities transferred on the National Equities Exchange and Quotations (NEEQ); (3) products and derivatives on bonds, interest rates and foreign exchange traded on the domestic inter-bank bond market which are deemed by PBOC as eligible for QFI; (4) investment funds; and (5) other financial instruments as approved by the CSRC.

---

---

#### Trading day

Investors (including the Portfolio) are only allowed to trade through the QFI regime on days on which the relevant PRC markets are open for trading, and banking services are available on the corresponding settlement days.

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities.

#### QFI status

Neuberger Berman Europe Limited has obtained QFI status. However, under the relevant investment regulations, the QFI status of Neuberger Berman Europe Limited could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFI status of the Sub-Investment Manager is suspended or revoked, the Portfolio may be required to dispose of its securities held through the QFI and may not be able to access the Chinese securities market via the QFI as contemplated in this Supplement, which may have an adverse effect on the Portfolio's performance.

Moreover, the relevant investment regulations generally apply at the QFI level and not simply to investments made on behalf of the Portfolio. Thus investors should be aware that violations of the relevant investment regulations arising out of activities through the QFI other than those conducted by the Portfolio could result in the revocation of or other regulatory action in respect of the QFI as a whole. The regulations relating to the investment restrictions in China A Shares are also generally applied at the QFI level (as discussed in detail below), and the Portfolio may also be impacted by the actions of other investors utilising the QFI status. Hence the ability of the Portfolio to make investments utilising the QFI status of Neuberger Berman Europe Limited may be affected adversely by the investments of other investors utilising the QFI status of Neuberger Berman Europe Limited.

#### Custody

China A Shares traded on the Exchanges are dealt and held in dematerialised form through ChinaClear. Exchange-traded securities purchased on behalf of the Portfolio through the QFI are required to be recorded by ChinaClear as credited to a securities trading account maintained in the joint names of the QFI and the Company (or such other account name as required by the relevant investment regulations which may reference also the Portfolio).

The Company/the QFI expects to receive a legal opinion from a qualified PRC law firm confirming that, as a matter of PRC law, the QFI will have no ownership interest in the securities and that the Portfolio will ultimately and exclusively be entitled to ownership of the securities.

However, given that, pursuant to the relevant investment regulations, the QFI as account-holder will be the party entitled to the securities (albeit that this entitlement does not constitute an ownership interest or preclude the QFI purchasing securities on behalf of the Portfolio), the assets of the Portfolio may not be as well protected as they would be if it were possible for them to be registered and held solely in the name of the Company (or the Portfolio). In particular, given that the QFI belongs to the Neuberger Berman group, there is a risk that creditors of the Neuberger Berman group may incorrectly assume, contrary to the legal opinion referred to, that the Portfolio's assets belong to the Neuberger Berman group and such creditors may seek to gain control of the Portfolio's assets in lieu of such liabilities.

The evidence of title of exchange-traded securities in the PRC consists only of electronic book-entries in the depository and/or registry associated with the relevant Exchange. These arrangements of the depositories and registries are new and not fully tested in regard to their efficiency, accuracy and security.

In order to prevent any trading failure, ChinaClear will automatically settle any trades executed by the PRC securities trading house relating to the securities trading account maintained in the joint names of the Company (or the Portfolio) and the QFI. Accordingly all instructions issued by the PRC securities trading house relating to the securities trading account will be executed without the need of consent or direction of the Depository.

#### Investment restrictions

Investments in the PRC securities market via the QFI are subject to compliance with certain investment restrictions imposed by the relevant investment regulations including the following, which

---

apply to each foreign investor (including the Portfolio) investing through the QFI and will affect the Portfolio's ability to invest in China A Shares and carry out their investment objectives:

- (i) shares held by each underlying foreign investor (such as the Portfolio) which invests (through QFI or other permissible channels) in one PRC listed company should not exceed 10% of the total shares of such company; and
- (ii) aggregate China A Shares held by all underlying foreign investors (such as the Portfolio and all other foreign investors) which invest (through QFI or other permissible channels) in one PRC listed company should not exceed 30% of the total shares of such company.

Although it has not been explicitly provided under the relevant investment regulations, in practice, the 10% single foreign shareholding restriction is also applied at the QFI level, under which a QFI may not hold 10% or more shares of any listed company, regardless of the fact that such QFI is holding such shares for a number of different clients. Accordingly, as the QFI status of Neuberger Berman Europe Limited is utilised by the Portfolio and other investors as well, the capability of the Portfolio to invest in the shares of certain listed company may be limited due to the investments in the shares of such listed company by other investors who also invest through the QFI status of Neuberger Berman Europe Limited. Specifically, when the shareholding of such other investors in a PRC listed company reaches 10%, the Portfolio may not be able to buy any such shares, even if the then effective price of such shares is advantageous to the Portfolio.

Similarly, since the 30% aggregate foreign shareholding restriction is monitored at the level of all foreign investors, the capability of the Portfolio to invest in China A Shares of certain listed company may also be limited due to the investments made by other foreign investors.

#### Disclosure to CSRC

In practice, structured products issued by QFI to give foreign investors access to China A Shares are required to be reported to CSRC. The information reported may include information on the Portfolio as applicable.

#### Disclosure to the Exchange

According to the relevant investment regulations, where the SSE or the SZSE spots any abnormal trading which may affect the normal trading order, it may request the involved QFI to promptly report the securities transaction and shareholding information of the QFI's relevant underlying investors, which may include information on the Portfolio.

#### **Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the "Investment Restrictions" section of the Prospectus and the UCITS Regulations.
- The Portfolio may invest up to 30% of its Net Asset Value in China A Shares.
- It is the intention of the Sub-Investment Manager to invest a maximum of 50% of the Portfolio's Net Asset Value in Emerging Market Countries.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

#### **Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the "Investment Risks" section of the Prospectus. Investors should read and consider the entire "Investment Risks" section of the Prospectus, in particular the risks identified in the "Investment Risks" section of this Supplement which are relevant to the Portfolio. In addition, investors should note that companies related to the Climate Innovation theme may be subject to significant volatility in growth rates due to rapidly changing market conditions and/or participants, more advanced or new technologies, new competing products and/or enhancements in existing products. This is also a highly technical sector, making it heavily dependent on patents and intellectual property rights and/or licences and the profitability of companies related to Climate Innovation may be adversely impacted by the loss or impairment of these intellectual property assets. Such companies may also be subject to unpredictable changes in competition. There is no assurance that products or services offered by Climate Innovation companies will not be rendered obsolete or be adversely affected by competing products, or that such companies will not be adversely affected by other challenges, such as instability, fluctuation, or an overall decline within the industry. As the Portfolio may hold a relatively small number of securities, investors should also consider the "Concentration Risk" sub-section of the "Investment Risks" section of the Prospectus, which may be relevant to the Portfolio. **These risks are not purported to be exhaustive and potential investors should**

**review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Sub-Investment Manager may use future foreign currency exchange contracts in order to hedge some currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

**Environmental,  
Social and  
Governance**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and only invests in those companies that follow good governance practices.

**Information about these environmental and social characteristics is available in the SFDR Annex.**

ESG themed investing is a core component of the Sub-Investment Manager's strategy for the Portfolio. The Sub-Investment Manager applies the: (i) Global Standards Policy; (ii) Controversial Weapons Policy; (iii) Thermal Coal Involvement Policy; (iv) the Sustainable Exclusion Policy; and (v) the Enhanced Sustainable Exclusion Policy when determining what investments to make for the Portfolio. Further details on these screening/exclusion policies are set out in the "*Sustainable Investment Criteria*" section of the Prospectus.

The Sub-Investment Manager will manage the Portfolio in accordance with the ESG Policy on a continuous basis. The Sub-Investment Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process. A summary of the ESG Policy is detailed in Annex VI of the Prospectus and it is available on the Neuberger Berman website, [www.nb.com/esg](http://www.nb.com/esg).

In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager intends to have at least 90% of the Portfolio's Net Asset Value invested in companies with Science-Based Target initiative ("SBTi")<sup>1</sup> validated targets (or equivalent as assessed by Neuberger Berman's net-zero sector alignment methodology, which conforms with the IIGCC target setting guidance<sup>2</sup>) by 2030 and to reach 100% of the Portfolio's Net Asset Value by 2050. Additionally, the Portfolio must reduce its carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>3</sup>, by a minimum of 30% by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Further details on Neuberger Berman's commitment to the Net Zero Asset Manager Initiative are contained in the "*Sustainable Investment Criteria*" section of the Prospectus.

The Sub-Investment Manager also participate in direct engagement with select investee companies (e.g. face-to-face meetings, frequent phone contact with senior management, discussions with customers, suppliers and competitors and attendance at industry and company conferences). Engagement with investee companies is encouraged to mitigate risks and improve ESG and financial outcomes. It is not envisaged that the Sub-Investment Manager will set engagement Key

<sup>1</sup> The SBTi is a partnership between CDP, the United Nations Global Compact, World Resources Institute and the World Wide Fund for Nature which enables companies to set science-based emissions reduction targets.

<sup>2</sup> IIGCC target setting guidance is a framework for investors to achieve net zero emissions alignment issued by the Institutional Investors Group on Climate Change.

<sup>3</sup> Scope 1 emissions: are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions: are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

Performance Indicators (“KPIs”) for investee companies. The Sub-Investment Manager views this direct engagement as an essential part of its investment process.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

**Typical Investor Profile**

The Portfolio may be suitable for investors seeking capital appreciation opportunities through equity investments exposed to long-term investment themes. Investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept periods of market volatility particularly over short time periods. Investors are likely to have a medium to long-term investment horizon.

**Fees and Expenses**

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.70%	0.00%
B, C2, E	0.00%	1.70%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.85%	0.00%
M	2.00%	1.70%	0.80%
P	5.00%	0.81%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.28%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

**Contingent deferred sales charges**

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus

SFDR Annex

1. **NEUBERGER BERMAN CLIMATE INNOVATION FUND**

SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Climate Innovation Fund (the “Portfolio”)

Legal entity identifier: 549300018IKJFVXLQ109

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

Yes   No

<p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective: ___%</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective: ___%</b></p>	<p><input checked="" type="checkbox"/> <b>It promotes Environmental/ Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <p><input type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>
---	---

**What environmental and/or social characteristics are promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses third-party data and the NB ESG Quotient to promote the environmental and social characteristics listed below. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted by the Portfolio, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager intends to have at least 90% of the Portfolio’s Net Asset Value invested in companies with Science-Based Target initiative (“SBTi”)<sup>4</sup> validated targets (or equivalent as assessed by Neuberger Berman’s net-zero sector alignment methodology, which conforms with the IIGCC target setting guidance<sup>5</sup>) by 2030 and to reach 100% of the Portfolio’s Net Asset Value by 2050. Additionally, the Portfolio must reduce its carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>6</sup>, by a minimum of 30% by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

Third-party data and the NB ESG Quotient (as explained above) are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third-party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third-

<sup>4</sup> The SBTi is a partnership between CDP, the United Nations Global Compact, World Resources Institute and the World Wide Fund for Nature which enables companies to set science-based emissions reduction targets.

<sup>5</sup> The IIGCC created the Net Zero Investment Framework to assist asset owners and asset managers to develop net zero investment strategies or to fulfil the requirements of net zero commitments. The IIGCC’s target setting guidance is a component of the Net Zero Investment Framework.

<sup>6</sup> Scope 1 emissions: are direct emissions from an issuer’s owned or controlled sources (such as emissions created directly by the issuer’s business processes or from vehicles owned by the issuer). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions: are all other indirect emissions that occur in an issuer’s value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

## II. Climate Value-at-Risk:

Climate Value-at-Risk (“**CVaR**”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

## III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy; the Neuberger Berman Thermal Coal Involvement Policy; the Neuberger Berman Sustainable Exclusion Policy and the Neuberger Berman Enhanced Sustainable Exclusion Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CvaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio’s mandatory periodic report (as per the requirements of Article 11 of SFDR).

### ● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold at least 50% sustainable investments which will aim to promote the environmental and social characteristics listed above and will aim to contribute to the Portfolio’s net zero goal, as detailed below.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB’s sustainable investment framework. This framework includes an assessment as to (i) whether the investment contributes to an environmental and/or social objective (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of a companies’ overall governance score to determine whether the company passes a good governance assessment. Under this sustainable investment framework, the Sub-Investment Manager utilises multiple data points that measure the alignment of a company’s economic activity with environmental or social characteristics.

The Sub-Investment Manager screens companies for controversies, significant harm and violations of minimum safeguards. If the companies pass this screen, the Sub-Investment Manager then proceeds to measure the companies’ environmental or social economic contribution.

The Sub-Investment Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals (“**SDGs**”).

Sustainable investments are more likely to have product/service revenue aligned with the SDGs. Consideration of revenue alignment with the SDGs is limited by the availability of adequate, reliable and verifiable data coverage. To mitigate instances of poor data coverage, the Sub-Investment Manager utilises third-party data and proxy data along with internal research and qualitative analysis as part of NB's sustainable investment framework.

Both the sustainable and non-sustainable investments held by the Portfolio will target net zero alignment by 2050, however the sustainable investments portion of the Portfolio would be expected to contribute to reducing the Portfolio's carbon footprint.

While the sustainable investments may have a social or an environmental objective, the sustainable investments will not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Sub-Investment Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "*How have the indicators for adverse impacts on sustainability factors been taken into account?*" below) and violations of minimum safeguards (with respect to which see "*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*" below). The Sub-Investment Manager also applies the ESG exclusion policies referenced above.

The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

***How have the indicators for adverse impacts on sustainability factors been taken into account?***

The Sub-Investment Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "**PAIs**").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view) in respect of the sustainable investments of the Portfolio and may evolve with improving data quality and availability. The Sub-Investment Manager will utilise third-party data and proxy data along with internal research to consider the PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fall below the quantitative and qualitative tolerance thresholds set for a PAI by the Sub-Investment Manager; and
- Application of the NB ESG exclusion policies detailed above, which includes consideration of several of the PAIs.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

--- How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Does this financial product consider principal adverse impacts on sustainability factors?**

- Yes Please see below  
 No

The Sub-Investment Manager considers PAIs with respect to the Portfolio in two ways:

1. All PAIs are considered when determining whether sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective as explained in “How have the indicators for adverse impacts on sustainability factors been taken into account?” above.
2. The Sub-Investment Manager will consider the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promote environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

With respect to the Product Level PAIs, the Sub-Investment Manager utilises third-party data and proxy data along with internal research to consider them.

Additionally, the Sub-Investment Manager conducts a letter campaign where the Sub-Investment Manager writes to select investee companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators, and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI by the Sub-Investment Manager; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on the consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The Portfolio seeks to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings, focusing on companies that are involved in or derive benefit from climate innovation related technologies and/or activities.

The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation.

The Portfolio focusses on companies involved in the design, manufacture or sale of products or services that provide technologies or solutions which enable decarbonisation through greenhouse gas reduction or contribute to accelerating a path towards a low-carbon economy ("**Climate Innovation**"). The Portfolio will invest in companies involved in (but not limited to) energy/battery storage, renewable energy, hydrogen energy, smart grids, electric vehicles, green buildings, low-carbon products, biomaterials, industrial automation, clean water, recycling and waste reduction, carbon capture, environmental monitoring and methanation (the conversion of carbon gases into methane for use as a fuel or means of energy storage).

The Portfolio will seek to achieve its objective by investing primarily in equity securities which are issued by companies that demonstrate:

- Thematic purity, assessed by conducting bottom-up work, based on engagement with management teams, company filings, industry data and other sources. Holdings with thematic purity are defined as those with at least 50% of incremental earnings/revenue growth or capex aligned with Climate Innovation related activities;
- Potential for reduction in GHG emissions, to enable the Portfolio to achieve its net-zero goal (as detailed further in the "*Environmental, Social and Governance*" section below)
- Strong financial characteristics, including growth, margins, and/or capital returns and historic valuations on metrics such as price to cash flow, price to earnings or price to book value;
- Industry leadership, through high market share, pricing power, or better technology/business models relative to peers, or new entrants gaining market share; and
- Proven management track record.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the third-party data and the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third-party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

The Sub-Investment Manager also conducts fundamental analysis aimed at assessing the company's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

1. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The third-party or NB ESG Quotient rating for companies are utilised to help to better identify risks and opportunities in the overall assessment of a company.

The Portfolio will focus investment in companies that are involved in Climate Innovation. The Sub-Investment Manager uses the NB ESG Quotient and an assessment of thematic purity to identify companies which operate within the long-term trend of Climate Innovation.

Holdings with thematic purity are defined as those with at least 50% of incremental earnings/revenue growth or capex aligned with Climate Innovation related activities.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor third-party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

2. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of the investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. It is not envisaged that the Sub-Investment Manager will set engagement Key Performance Indicators ("KPIs") for investee companies.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagements with companies which have high impact controversies (such as companies placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)) or which have a poor third-party or NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

3. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which place limitations on the investable universe.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by companies whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

### What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding at least 50% sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity and hedging. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third-party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate company or third-party data.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for investment, hedging and/or efficient portfolio management, it will not use derivatives to promote environmental or social characteristics.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

N/A – the Portfolio does not consider Taxonomy-aligned investments.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>7</sup>?**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager is not committing that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. As such, the minimum proportion of the Portfolio's investments that contribute to environmentally sustainable economic activities for the purposes of the EU Taxonomy will be 0%. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves. The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

<sup>7</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

While the Portfolio commits to holding at least 50% sustainable investments, it is not committing to holding a minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy as this may vary from 0% to 50%.

This is because the Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

**What is the minimum share of socially sustainable investments?**

While the Portfolio commits to holding at least 50% sustainable investments, it is not committing to holding a minimum share of socially sustainable investments as this may vary from 0% to 50%.

This is because the Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity and hedging.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

**How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

N/A

***How does the designated index differ from a relevant broad market index?***

N/A

***Where can the methodology used for the calculation of the designated index be found?***

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

## DEFINITIONS

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>Dealing Day</b>	(i) every second Thursday, as specified on a calendar of dealing days available on the website of the Sub-Investment Manager or, if such second Thursday is not a Business Day, the following Business Day; and / or  (ii) any other day which the Directors have determined, subject to advance notice to all Shareholders and provided there is at least one Dealing Day per fortnight;
<b>Dealing Deadline</b>	3.00 pm (Irish time) six (6) Business Days before the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) six (6) Business Days before the relevant Dealing Day;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of the Portfolio, provided that such time shall always be after the Dealing Deadline;
<b>Portfolio</b>	the Neuberger Berman CLO Income Fund; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

## INVESTMENT RISKS

Investment in the Portfolio carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “*Risks*” section in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

## DISTRIBUTION POLICY

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter; and
- each of the other Distributing Classes in the Portfolio shall be declared on a quarterly basis and paid within 30 Business Days thereafter.

## SUBSCRIPTIONS

Subscriptions for Shares in all available Classes in the Portfolio will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

Subscriptions in the Portfolio will only be accepted as subscriptions for Shares of a cash value. Subscriptions for specific numbers of Shares will not be accepted.

The Initial Offer Period shall run from 9.00 am on the Business Day following the date of this Supplement to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the Classes shall be as follows:

AUD Classes: AUD 10	EUR Classes: EUR 10	NOK Classes: NOK 100
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
DKK Classes: DKK 50	JPY Classes: JPY 1,000	USD Classes: USD 10

Thereafter, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

As disclosed in the “*Subscriptions*” section of the Prospectus, the Company may, in its sole discretion, reject any subscription in whole or in part without reason. Investors should also note that the Directors have determined not to accept any subscriptions in specie into the Portfolio.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

For the avoidance of doubt, no Shares will be available in BRL, CLP, CNY, ILS, NZD, or ZAR-denominated Classes.

## REDEMPTIONS

As disclosed in the “*Redemptions*” section of the Prospectus, if on any Dealing Day outstanding redemption requests from all Shareholders in the Portfolio total more than 10% of the Shares in issue on such Dealing Day (the “**Redemption Ceiling**”), the Company shall be entitled, in its discretion, to refuse to redeem such number of Shares in that series in excess of the Redemption Ceiling on that Dealing Day, as the Directors shall determine.

If the Company refuses to redeem Shares for this reason, all requests for redemption on such Dealing Day shall be reduced rateably and the Shares to which each request relates which are not redeemed on that Dealing Day shall be redeemed on each subsequent Dealing Day in accordance with the provisions of the Articles until all the Shares of the series to which the

original requests related have been redeemed, provided always that in no case will the Company be obliged to redeem Shares of a particular series in excess of the Redemption Ceiling on any Dealing Day.

Shareholders may request that Shares be redeemed on any Dealing Day by completing and submitting a Redemption Application to the Administrator in accordance with the procedures set out in the Prospectus. Redemption Applications will generally not be accepted after the Dealing Deadline. Redemption Applications received after the Dealing Deadline will be held over until the next applicable Dealing Day, unless the Directors determine in their sole discretion, in exceptional circumstances and where such Redemption Applications are received before the relevant Valuation Point, to accept such Redemption Applications on the relevant Dealing Day.

Shares will be redeemed at the applicable Net Asset Value per Share on the Dealing Day as of which the redemption is effected, subject to any applicable fees associated with such redemption. Subject to any provisions contained in the "*Redemptions*" section of the Prospectus, distributions in respect of redemptions will be paid in full (on the basis of unaudited data) in the applicable Class Currency of the Shares being redeemed within three (3) Business Days after the relevant Dealing Day. All payments will be made by transfer to the bank account previously designated by Shareholders for such purpose.

## NEUBERGER BERMAN CLO INCOME FUND

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Portfolio will not use FDI extensively or primarily for investment purposes.**

### Investment Objective

The Portfolio aims to achieve a target average return of 4-5% over the Benchmark (as specified in the “*Benchmark*” section below) before fees over a market cycle (typically 3 years or over) by investing primarily in USD and EUR denominated floating rate collateralised loan obligations (“**CLO**”) mezzanine debt securities and also in US high yield debt securities which are listed or traded on Recognised Markets.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

### Investment Approach

The Sub-Investment Manager will aim to achieve the Portfolio’s investment objective through a disciplined investment process, which seeks to identify CLO mezzanine debt securities which are backed by an underlying portfolio of loans with a higher portfolio score, as described in more detail below, under the “*CLO Security Portfolio Review*” heading.

A CLO is a type of asset backed security supported by interest and principal payments generated from a pool of non-investment grade loan and debt instruments. The issue of CLO securities involves a form of securitisation, where principal and interest payments from multiple corporate loans and debt instruments are pooled together, packaged into securities in various tranches. A CLO security is a securitised asset.

The pools of loans and debt instruments are managed by a collateral manager appointed by the CLO. The collateral manager is responsible for selecting the loans and debt instruments to be purchased and sold and for determining the timing of such purchases and sales in accordance with the CLO’s governing documents.

CLOs typically issue securities in three tranches, each of which offers distinct risk and return profiles. Each tranche varies in terms of the priority and rate at which its holders will be paid out when income is received by the CLO, from the underlying loans. The senior tranche securities will receive income in priority to all other tranches but will receive the lowest rate, while the most junior tranche will not receive any income payment but will benefit from any increases in the value of the pool of underlying loans and will bear the primary risk of defaults in this pool. In order of priority of receipt of income, the tranches are: senior, mezzanine and equity tranches. Mezzanine notes are typically issued by a CLO with original ratings ranging from A/A2 to B-/B3.

The Portfolio will hold mezzanine notes and so will receive income only after payments to the CLO’s senior notes have been made in full. Additionally, if an individual CLO’s coverage ratio and/or portfolio tests are not met, cash flow that would otherwise have been available to apply towards the mezzanine notes may instead be used to redeem senior notes and/or purchase additional collateral. This may result in the deferral, reduction or elimination to interest and/or principal due to the holders of mezzanine notes. The Portfolio will not have recourse against a CLO for any such deferral, reduction or elimination made in accordance with the terms of a CLO’s structuring documents. The Sub-Investment Manager’s review of the CLO incorporates detailed scenario analysis which will include the assessment of the CLO’s coverage ratio tests and the potential impact on the CLO’s expected cash flows. An individual CLO’s coverage ratio serves to preserve the collective value of the CLO’s underlying portfolio of loans for the benefit of debt investors at the expense of the equity investors in case of a certain level of credit stress in the underlying loan portfolio.

In constructing the portfolio, the Sub-Investment Manager will undertake the following:

1. A fundamental credit review of the individual, underlying loan holdings in CLO portfolios, utilising the expertise of the Sub-Investment Manager;

2. A detailed analysis of the collateral managers of each CLO, in terms of the quality of the manager's personnel and resources, historical investment performance and investment style;
3. A detailed review of the CLOs' structure and documentation; and
4. An assessment of the general CLO market.

#### **CLO Security Portfolio Review**

The Sub-Investment Manager will review the individual loan holdings in any CLO security's portfolio to assign a portfolio score to each CLO. Portfolio scores are created through an assessment of a number of factors including the credit quality of the individual loan holdings in the portfolio, the size and liquidity of the loan holdings, the structural protections and risk assessments. By way of example, higher credit quality of the individual loan holdings in the portfolio, a larger size and higher liquidity, increased structural protection and more robust risk assessments; will contribute to a higher portfolio score for a CLO.

The structural protections inherent in CLO securities consist of overcollateralization. The level of overcollateralization for CLO mezzanine debt securities in which the Portfolio will invest will exceed the Sub Investment Manager's expectations of losses in the underlying loan portfolios, even in stressed scenarios.

Risk assessment is part of the portfolio review, in which the Sub Investment Manager will assess the level of default risk, market risk, correlation risk, industry risk or other risk factors that it determines may negatively affect the portfolio. The manager of the CLO is also assessed for potential risks, such as past performance, conflicts of interest, or key-person risk, as described in greater detail under "*CLO Manager Review*" below. The Sub Investment Manager may seek to manage these risks by requiring additional restrictions to be included in the governing documentation pertaining to the CLO securities.

The Sub-Investment Manager will undertake ongoing monitoring of the CLO security's portfolio. The CLO security's portfolio scores are updated on a monthly basis, as updated information for the underlying loan portfolios becomes available. In times of volatility the review of the underlying portfolio of loans may be undertaken more frequently to capture intra-month price movements in the underlying loans.

#### **CLO Manager Review**

The Sub-Investment Manager will conduct in-depth reviews of the manager of every CLO it invests in as well as most other CLO managers in the market and will monitor each CLO manager, their issued securities and the underlying portfolio of loans and associated performance on an ongoing basis. Reviews include a full examination of the CLO manager's investment team, resources and systems.

Portfolio and performance monitoring focuses on manager style, portfolio construction and trading strategy and the consistency of these over time. CLO manager reviews will generally include ongoing due diligence in the form of a call or meeting at least twice per year.

During reviews and examinations of managers the Sub-Investment Manager's team focuses on several key items, including: (i) ensuring that the manager is not overly reliant on one or two key individuals (key man risk); (ii) whether the manager has an effective credit analyst team in place; (iii) whether the CLO and/or the manager has a stable ownership structure / capital backing; (iv) the quality of systems used by the manager; and (v) how compliance testing is undertaken and whether there is an alignment of interest between the manager and the investors in the CLOs that it manages.

#### **CLO Structure and Documentation**

In assessing which CLO securities to select as investments for the Portfolio, the Sub-Investment Manager will conduct a detailed analysis of the CLO's structure and documentation. The Sub-Investment Manager utilises its experience in structuring and managing CLOs to identify what it believes to be the key differentiating elements (positive or negative) in any CLO's documents and incorporates those elements into its overall investment decision. Key differentiating elements include:

- the ability of individual CLO structures to withstand stress scenarios as a result of the protection offered by the CLO's credit enhancement and coverage ratio tests (Credit enhancement typically takes the form of excess collateral in the underlying loan portfolio

to ensure repayment of the CLO debt securities);

- the flexibility afforded to the manager of the CLO with respect to the risk profile of the underlying loan portfolio under the governing documents and how this impacts each tranche of the CLO's securities (e.g. the Sub-Investment Manager may take a negative view of wide discretion being afforded to the manager of the CLO in respect of the quality of loans that the CLO will hold as collateral, and therefore may avoid holding such securities); and
- concentration limits inherent within the structure with regards to the portfolio of underlying loans and its associated credit risk.

The US Dollar-denominated CLO securities in which the Portfolio will invest will be issued by CLOs which will be incorporated in the Cayman Islands and the Euro-denominated CLO securities in which the Portfolio will invest will be issued by CLOs which will be incorporated in Ireland or the Netherlands. CLOs have an independent board of directors, auditor, and established trustee whose duties are outlined in the governing documents.

It is the Sub-Investment Manager's belief that the CLO's documentation can be a critical aspect of investor protection in periods of market stress.

#### **Assessment of the CLO Market**

The Sub-Investment Manager makes ongoing relative value determinations with respect to the pricing of any offered CLO securities. These relative value determinations are based on many factors, including but not limited to market volumes, market trends and relative pricing levels.

Participation in the market and evaluation of investments gives the Sub-Investment Manager an insight into how the market is pricing certain risks and how that may be evolving. Additionally, market factors such as expected net supply of CLO securities, regulatory changes, investor dynamics and the expected outlook for the loan market factor into the Sub-Investment Manager's perception of relative value and where it believes the CLO market may be heading.

#### **Portfolio Construction**

CLO securities may be offered for sale through two means: (i) primary market (i.e. the direct, initial offering of securities by a CLO), which has a long settlement period than can be up to 25 days and (ii) secondary market (i.e. the normal purchase and sale of CLO securities on markets following their initial issue by the CLO), which will settle in two days, in line with the normal cycle for debt instruments. The opportunities for investment in CLO securities sourced in the primary markets and the speed at which the Portfolio will be able to invest in such CLO securities will be dependent on primary market volumes as well as the Sub-Investment Manager's credit assessment of primary deal flow coming to market at any particular moment. Where the Sub-Investment Manager invests in CLO securities through the primary market, the Portfolio will not have to pay for the securities until the end of the relevant settlement period and so the Sub-Investment Manager may utilise the Portfolio's assets which will be used to pay for the CLO securities to invest in US high yield debt securities and / or collective investment schemes that are themselves exposed to US high yield debt securities (each as described in the "*Instruments / Asset Classes*" section below), while waiting for the CLO securities to settle.

Therefore, by making such investments, the Sub-Investment Manager may have at times a greater exposure to US high yield securities and/or cash as the Sub-Investment Manager seeks to achieve its desired target portfolio mix for the Portfolio (typically 80% of Net Asset Value invested in CLO securities and 20% in US high yield debt securities). The Sub-Investment Manager expects to reduce the Portfolio's exposure to high yield debt securities over time and use the proceeds realised from this reduction to invest in further CLO securities.

In respect of its investments in the high yield securities, the Sub-Investment Manager will attempt to maintain a portfolio that is typically diversified across issuers, industry sectors and maturities. The Sub-Investment Manager will seek to capitalise on market opportunities in areas of the high yield market which the Sub-Investment Manager believes are undervalued (based its fundamental analysis of these areas relative to prices of securities in these areas) and which will therefore generate added value.

The Sub-Investment Manager seeks to construct a portfolio of CLO securities that is well

diversified across individual managers and industry exposures. Typically individual CLO or high yield positions will not exceed 5% of the Net Asset Value of the Portfolio, except in certain circumstances where the Sub-Investment Manager is of the opinion that it would be of benefit to the Portfolio to hold in excess of 5% of the Net Asset Value.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

<b>Benchmark</b>	<p>ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD).</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>
<b>Base Currency</b>	U.S. Dollars (USD).
<b>Instruments / Asset Classes</b>	<p>The Portfolio will invest in the instruments and asset classes described in this section which may be issued and listed or traded on Recognised Markets globally and will invest mainly in CLO debt securities and US high yield fixed income securities. The Portfolio can invest in or be exposed to the following types of assets.</p> <p><b>Fixed Income (Debt Securities).</b> These securities may include:</p> <ul style="list-style-type: none"> <li>• CLO mezzanine floating rate debt, typically rated Baa3 or lower;</li> <li>• Both fixed and floating rate debt securities, including bonds, issued by governments, government related and corporate entities worldwide denominated in local currencies;</li> <li>• Corporate bonds, bonds with warrants, convertible bonds, bonds resulting from the restructuring of syndicated loans or bank loans (e.g. "Brady" bonds), subordinated bonds, debentures and notes (including freely transferable and unleveraged structured notes and freely transferable promissory notes);</li> <li>• Asset-backed securities, structured securities (including mortgage-backed securities such as pass-through certificates, which entitle the holders to receipt of mortgage payments, collateralised mortgage obligations and interest and principal only components of mortgage-backed securities) that derive interest and principal payments from specified assets (including residential and commercial mortgages, credit card debt and pools of other kinds of receivables, such as loans, royalties or other earnings); and</li> <li>• Deferred payment debt securities (securities which pay regular interest after a predetermined date), zero coupon securities that are rated below investment-grade (often referred to as "junk bonds") and payment-in-kind bonds (which are bonds that pay interest in the form of additional bonds of the same kind).</li> </ul> <p><b>Money Market Instruments.</b> The Portfolio may also invest on an ancillary basis in money market instruments including bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.</p> <p><b>Collective Investment Schemes.</b> In addition, the Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's other investments. Such collective investment schemes may be managed by the Manager and/or Sub-Investment Manager or its affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments. They may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.</p> <p>Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged (i) in excess of 100% of their</p>

net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**Financial Derivative Instruments (“FDI”).** FDI will be used for hedging and/or efficient portfolio management and subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement:

- Swaps, currency swaps, interest rate swaps, UCITS eligible indices swaps and total return swaps in respect of each of the other types of assets in which the Portfolio may invest, as described in this “*Instruments/Asset Classes*” section, may be used to obtain exposure to the broad short duration, high yield fixed income market, pending investment in the securities described above and to hedge existing long positions. The maximum proportion of the Portfolio’s Net Asset Value that can be subject to total return swaps is 10%. The expected proportion of the Portfolio’s Net Asset Value that will be subject to total return swaps is 0%;
- Future contracts based on interest rates, fixed income securities, UCITS eligible bond indices may be used to hedge interest rate risk inherent in the portfolio; and
- Forwards on fixed income securities and currency contracts may be used to achieve a profit as well as to hedge existing long currency exposures.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to achieve a rate of return greater than the market. The bond indices utilised as FDI for hedging purposes will be broad-based, UCITS-eligible indices which provide exposure to the performance of bonds and details of such bond indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

#### Investment Restrictions

- There are no restrictions on the average maturity of the Portfolio or the maturity of any single instrument. Maturities may vary widely depending on the Sub-Investment Manager’s assessment of interest rate trends and other economic and market factors.
- A maximum of 10% of the Net Asset Value of the Portfolio may be invested in securities issued any single securities issuer.
- A maximum of 20% of the Net Asset Value of the Portfolio may be invested in securities managed by a single CLO manager (including its affiliates).
- Any cash held by the Portfolio will be held solely as an ancillary liquid asset.
- The Portfolio will not utilise securities lending or margin lending.

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the risks summarised in the following sections, namely, “*Market Risks: Risks relating to Debt Securities*” and “*Risks relating to Collateralised Loan Obligations*” are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Sub-Investment Manager will use forward currency contracts in order to hedge currency risk.
- Due to the risk that settlement of transactions in CLO securities may be lengthy and/or

delayed, the Portfolio may temporarily allocate cash inflows to high yield debt securities before settlement takes place and the Portfolio may therefore be proportionately less exposed to CLOs at certain times following large subscriptions.

- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.
- The Portfolio may become subject to investment restrictions relating to risk retention requirements under the European STS Securitisation Regulation (EU 2017/2402) that may affect the availability of eligible CLOs in which the Portfolio may invest, as, following the effective date of this regulation, the Portfolio may only invest in CLOs if the originator, sponsor or original lender of the CLO has explicitly disclosed that it retains, on an on-going basis, a material net economic interest in the CLO of at least 5 per cent.
- There is a risk that the CLO securities may be subject to deferral/accrual of interest in the event of high levels of default among the relevant underlying loan portfolio.

### **Environmental, Social and Governance ("ESG")**

This Portfolio is classified as an Article 6 Portfolio under SFDR. This Portfolio integrates Sustainability Risks into its investment process but does not promote environmental or social characteristics nor does it have a sustainable investment objective.

When determining the initial security selection, the Sub-Investment Manager will not invest in loans issued by CLO managers whose underlying portfolio of loans have been identified as breaching (i) the Global Standards Policy; (ii) the Controversial Weapons Policy; and (iii) the Thermal Coal Involvement Policy.

The Sub-Investment Manager will monitor the application of the above exclusions. However, the Sub-Investment Manager cannot exercise discretion over the underlying portfolio of loans managed by the CLO managers. Where elements of the underlying portfolio of loans are identified as violating the above exclusions, the Sub-Investment Manager seeks to engage with the relevant CLO manager(s).

Further details on this screening/exclusion policy is set out in the "Sustainable Investment Criteria" section of the Prospectus.

The Sub-Investment Manager exercises portfolio management discretion in the selection of CLO managers. However, the Sub-Investment Manager cannot exercise discretion over the underlying portfolio of loans. As a result, the Sub-Investment Manager focuses on engaging with CLO managers to actively improve their ESG processes, provide feedback on ESG frameworks and offer guidance in the event that the Sub-Investment Manager identifies loans (in the underlying portfolio of loans) that have financially material ESG risks.

As part of engagement with CLO managers, due diligence questionnaires are requested to be completed that seek to ascertain the sophistication, integration and importance that ESG factors have in CLO portfolio management. Based on the feedback provided in the questionnaires, the team may seek to encourage a CLO manager to adopt certain changes to their investment process or reduce the Portfolio's exposure to such CLO manager.

The Portfolio utilises the NB ESG Quotient to assess underlying portfolio of loans. These internal credit ratings are notched up or down depending on the issuer's ESG profile.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

### **Typical Investor Profile**

The Portfolio may be suitable for an investor seeking to increase the value of their investment over a long term time horizon, through investment in an actively managed, diversified range of CLO instruments. Investors need to be comfortable with the risks associated with the Portfolio and its investments, particularly the potential for illiquidity of CLO securities in times of market stress. The investor should be prepared to accept periods of market volatility and the risks of capital markets in the pursuit of long term goals, given the ability of the Portfolio to invest in predominantly CLO mezzanine debt and/or below investment grade securities.

### **Fees and Expenses**

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.50%	0.00%
B, C2, E	0.00%	1.50%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	1.00%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.75%	0.00%
M	2.00%	1.50%	0.60%
P	5.00%	0.71%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.13%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

The Directors of the Company whose names appear in the “*Management and Administration*” section of the Prospectus accept responsibility for the information contained in this document. To the best of the knowledge and belief of the Directors (who have taken all reasonable care to ensure that such is the case) the information contained in this document is in accordance with the facts and does not omit anything likely to affect the importance of such information. The Directors accept responsibility accordingly.

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## COMMODITIES FUND SUPPLEMENT

**6 DECEMBER 2023**

**This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-fund which is a separate portfolio of the Company:**

**NEUBERGER BERMAN COMMODITIES FUND**

**(the “Portfolio”)**

**CONTENTS**

Definitions	3
Investment Risks	3
Distribution Policy	5
Subscriptions and Redemptions	5
Neuberger Berman Commodities Fund	6

## DEFINITIONS

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in the Portfolio;
<b>Dealing Deadline</b>	11am (Irish time) on the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 12.30 pm (Irish time) on the relevant Dealing Day;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of the Portfolio;
<b>Portfolio</b>	the Neuberger Berman Commodities Fund; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC, or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

## INVESTMENT RISKS

Investment in the Portfolio carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

#### DISTRIBUTION POLICY

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Distributing Classes in the Portfolio will be declared on a quarterly basis and paid within 30 Business Days thereafter;
- each of the (Monthly) Gross Income Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter; and
- each of the other (Gross) Income Distributing Classes in the Portfolio shall be declared on a quarterly basis and paid within thirty Business Days thereafter.

#### SUBSCRIPTIONS AND REDEMPTIONS

Subscriptions for Shares in all Classes will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

Except as provided below, the Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## NEUBERGER BERMAN COMMODITIES FUND

**Investors should note that the Portfolio may achieve its investment objective by investing principally in financial derivative instruments as described below which may be complex and sophisticated in nature. An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. An investment in the Portfolio should be viewed as medium to long term. The Portfolio will invest principally in financial derivative instruments.**

<b>Investment Objective</b>	The Portfolio seeks to provide an attractive level of total return (income plus capital appreciation) by seeking exposure to a broad range of commodities.
<b>Investment Approach</b>	<p>The Sub-Investment Manager will seek to achieve the Portfolio's investment objective primarily by seeking exposure to various commodities groups, including:</p> <ul style="list-style-type: none"> <li>(i) Energy (such as Brent crude, heating oil, natural gas, unleaded gasoline, WTI crude oil, gasoil);</li> <li>(ii) Precious metals (such as gold, silver, platinum, palladium);</li> <li>(iii) Industrials metals (such as aluminium, copper, nickel, zinc, lead);</li> <li>(iv) Livestock (such as lean hogs, live cattle, feeder cattle);</li> <li>(v) Softs (such as sugar, cocoa, coffee, cotton); and</li> <li>(vi) Agriculture (such as corn, soybean, wheat, Kansas wheat, soymeal, bean oil).</li> </ul> <p>The Portfolio will seek to obtain this exposure through a blend of investments including, primarily, investment in commodity-related financial derivative instruments ("FDI"); direct investment in the equities and equity-related securities (namely, common and preferred stock, ADRs and GDRs) of commodity-related companies. The Portfolio may also seek to achieve exposure to commodities by investing in units or shares of collective investment schemes, including exchange traded funds ("ETFs") and other sub-funds of the Company, where such investment provides commodity exposure consistent with the investment policy of the Portfolio.</p> <p>The commodity related FDI in which the Portfolio will invest for direct investment purposes will be limited to total return swaps (as further described below in the sub-section entitled "<i>Financial Derivative Instruments (FDIs)</i>") within the "<i>Instruments/Asset Classes</i>" section of this Supplement. Such swaps will be used primarily to provide the Portfolio with exposure to a range of UCITS-eligible financial indices comprised of commodity futures. The indices in which the Portfolio will invest via the use of total return swaps are described in more detail below in the section of this Supplement entitled "<i>Commodity Indices</i>". The Portfolio may have both long and short exposures to the assets in which it invests, as further described below. The Portfolio may also invest in swaps providing equity exposure consistent with the Portfolio's investment policy.</p> <p>The Sub-Investment Manager will use various quantitative models employing strategies intended to identify investment opportunities from the investment universe and to determine portfolio weightings in different commodity sectors and markets. These strategies include: (i) a risk-balancing strategy that considers the total portfolio risk which the Sub-Investment Manager believes to be associated with each commodity; (ii) a strategy that endeavours to assess top-down macro variables (such as business cycles, inflation concerns, risk appetite and the monetary environment) among various commodity sectors; and/or (iii) a strategy that endeavours to assess the outlook for individual commodities within each commodity sector. The portfolio will be further enhanced through modest tactical tilts (ie, changes to the output suggested by the quantitative models, where the Sub-Investment Manager believes that returns can be generated by taking advantage of market inefficiencies which the models have not identified).</p> <p>Fundamental research is also undertaken by the Sub-Investment Manager involving analysing supply and demand for each of the commodities, trends in the costs of production, levels of demand for the commodities and how those levels can be affected by changes in the market, technology, interest rates and other factors.</p>

The Portfolio will also invest in fixed income instruments, including cash and cash equivalent instruments to manage the collateral of the swap exposures. The Sub-Investment Manager will manage the collateral by investing, subject to the requirements set out under “*Management of Collateral*” in the “*Portfolio Investment Techniques*” section in the Prospectus, in global fixed income debt securities and short-dated Euro-denominated bonds, to seek to opportunistically enhance the cash returns and provide liquidity and collateral cover. The Sub-Investment Manager will seek to select issuers through fundamental analysis (i.e. changes in the level of issuers’ indebtedness and their impact on the creditworthiness of the issuers) and technical analysis (i.e. changes in the flows of the issue of debt securities) to seek to identify undervalued securities (i.e. those which the Sub-Investment Manager thinks are available at prices which are below their true value) and exploit investment opportunities. The process incorporates credit analysis on the issuers of the selected securities, issuers’ liquidity and risk analysis, as well as monitoring traditional credit statistics, for example, coverage ratios (looking at the factor by which an issuer’s liability can be covered by its income) or leverage ratios (looking at the factor by which the loss or return on an investment may exceed the initial investment).

Because the Portfolio will use derivatives to gain exposure to commodities, and because derivatives may not require the Portfolio to deposit the full notional amount of the investment, the Portfolio may invest a significant amount of its assets in cash or cash equivalent instruments, money market mutual funds or other fixed income investments, as described in the “*Instruments/Asset Classes*” section of this Supplement to ensure that it has adequate cover for the margin requirements associated with such investments. The Portfolio’s use of commodity-linked derivative instruments to obtain exposure to the commodity markets may result in leverage, which amplifies the risks that are associated with the commodities underlying the derivative instruments. The anticipated maximum ratio of the value of the long positions to the absolute value of the short positions is 140:80. The Portfolio may take short positions to reduce its net exposure, however the Portfolio’s net exposure will always be positive, as indicated above.

The Sub-Investment Manager does not apply the ESG Policy and deems Sustainability Risks not to be relevant as the Portfolio’s strategy does not support the integration of same.

The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes.

This Portfolio is classified as an Article 6 Portfolio under SFDR.

## Commodity Investment

The Sub-Investment Manager will pursue an active investment strategy designed to provide comprehensive exposure to commodities and the balance at any time between the Portfolio’s investment in commodity-related swaps and in other commodity-related investments, as described above, will be based on fundamental and quantitative research undertaken by the Sub-Investment Manager and the relative risk-reward (as determined by the Sub-Investment Manager in its exclusive opinion based upon the findings of its research) of owning commodity-related derivatives over a direct holding in commodity-related equities or in other commodity-related investments or vice versa. Consequently, the majority of the Portfolio may at any time be invested in commodity-related swaps or, alternatively, on other commodity-related investments (including, principally, equities and/or equity-related securities of commodity-related companies).

The Sub-Investment Manager retains the flexibility to achieve exposure to commodities through the use of swaps and equities of commodity related companies. The Portfolio will use swaps to gain exposure to commodities, here referred to as the “*Commodity Indices*” collectively and each a “*Commodity Index*”. As of the date of this Supplement, the Portfolio will use UCITS compliant Goldman Sachs Overweight and Equal Weight Commodity Indices or the Bloomberg Capped Sub Index Family. The complete list and the individual details of these index families can be found here:

[Goldman Sachs Commodity Strategies Methodology](https://www.gsfnfundsolutions.com/commodities/GSOverweightMethodology.pdf) - <https://www.gsfnfundsolutions.com/commodities/GSOverweightMethodology.pdf>

[Bloomberg Commodity Index Methodology](https://data.bloomberglp.com/professional/sites/10/BCOM-Methodology.pdf) - <https://data.bloomberglp.com/professional/sites/10/BCOM-Methodology.pdf>

Each of the Commodity Indices is a rules-based index which aims to provide synthetic exposure to a diversified basket of commodity futures contracts across the following commodity sectors: (i) energy; (ii) precious metals; (iii) industrial metals; (iv) livestock; (v) grains; and (vi) softs. The Portfolio will not invest directly in the commodities futures contracts comprising the Commodity

Indices and will only ever seek to achieve its exposure to the Commodity Indices synthetically, through the use of total return swaps.

Each of the Commodity Indices rebalances on a monthly basis. Rebalancing of any of the Commodity Indices to which the Portfolio may have exposure from time to time will not affect, in a material amount, the cost to the Portfolio of the swap used to obtain the exposure.

Investors should note that the respective weightings of the index constituents are expected to fluctuate in between reconstitutions of the relevant Commodity Indices. In the event that the weighting of any particular constituent of a Commodity Index to which the Portfolio has exposure via a swap exceeds the permitted investment restrictions due to market movements, the Portfolio will continue to receive the performance of the Commodity Index from the relevant swap counterparty or counterparties, but the respective weightings of the Commodity Index constituents will be brought back within the permitted limits on the occasion of the next rebalancing by the index provider.

The Directors reserve the right, if they consider it in the interests of the Portfolio to do so and with the consent of the Depositary, to substitute another index for any of the Commodities Indices, in accordance with the terms of the Prospectus. Any determination by the Directors that the Portfolio should use another index at any time shall be subject to the provision of reasonable notice to Shareholders to enable any Shareholders who wish to do so to redeem their Shares prior to implementation of this change and this Supplement will be updated accordingly.

---

<b>Benchmark</b>	<p>Bloomberg Commodity Total Return Index (BCOMTR) (Total Return, USD) is a highly liquid, diversified benchmark for commodities investments, which combines the returns of the headline Bloomberg Commodity Index<sup>SM</sup> with the returns on cash collateral invested in U.S. treasury bills in order to represent a fully collateralised investment in the Bloomberg Commodity Index<sup>SM</sup>.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>
------------------	--

---

<b>Base Currency</b>	US Dollars (USD).
----------------------	-------------------

---

<b>Instruments / Asset Classes</b>	<p>The Portfolio will invest in or be exposed to the following types of assets:</p> <p><b>Financial Derivative Instruments (“FDIs”)</b> Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement, the Portfolio may use the following FDI for hedging, including synthetic short hedging, efficient portfolio management and/or other investment purposes:</p> <ul style="list-style-type: none"> <li>• Future contracts based on interest rates, UCITS eligible indices and currencies may be used to hedge existing long positions;</li> <li>• Swaps and swaptions may include currency, interest rate, UCITS eligible indices (including the Commodity Indices), volatility, variance, credit default, excess return, cross currency and total return swaps (in respect of each of the other types of assets in which the Portfolio may invest, as described in this “<i>Instruments/Asset Classes</i>” section) and may be used to hedge existing long positions. Excess return swaps are OTC FDI under which one party will agree to pay the other the return of an underlying asset and the other party agrees to pay the first party a fee, either periodically or upfront on entry into the swap. An excess return swap differs from a total return swap because the payment that the other party receives will be based solely on the performance of the underlying asset, while the payment to the other party under a total return swap will also include an element to reflect the return which cash to the value of the notional amount of the swap would have earned on deposit. The maximum proportion of the Portfolio’s Net Asset Value that can be subject to total return swaps is 140%. The expected proportion of the Portfolio’s Net Asset Value that will be subject to total return swaps is 100%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;</li> <li>• Forwards and non-deliverable forward contracts on fixed income securities and currency contracts may be used to hedge existing long currency exposures; and</li> </ul>
------------------------------------	--

---

- Options on fixed income securities, interest rates, interest rate futures and UCITS eligible indices, volatility and currencies may be used to hedge existing long positions.

Swaps, swaptions, options, futures and forwards may each be used to generate synthetic short positions for investment, hedging or efficient portfolio management purposes in respect of assets which the Sub-Investment Manager expect to decrease in value.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Sub-Investment Manager may be invested in the other types of securities listed in this “*Instruments/Asset Classes*” section. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities to add excess return.

The counterparties to OTC FDI entered into in respect of the Portfolio will be entities (which will not be related to the Manager and the Sub-Investment Manager or their delegates) with legal personality which may be located globally. They will be subject to ongoing supervision by a public authority, be rated at or in excess of the requirements of the Central Bank by a Recognised Rating Agency and have the necessary organisational structure and resources for the relevant type of transaction.

Any indices to which exposure is taken through FDI will be broad-based, UCITS-eligible indices which provide exposure to the performance of the types of assets in which the Portfolio may invest or to commodities, as described in this “*Instruments/Asset Classes*” section. Where exposure is gained to a particular index or indices through the use of any of the FDI outlined above, additional information on the relevant index or indices (including information on the rebalancing frequency of the relevant index) shall be made available in the annual reports of the Company.

**Fixed Income Securities (Debt Securities).** These securities may include both fixed and floating rate debt securities, including bonds issued by governments, government-related and corporate entities, denominated in local currencies, as well as investment grade securities, which are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies.

- (i) Corporate bonds, convertible bonds (which will not embed derivatives), bonds resulting from the restructuring of syndicated loans or bank loans (e.g. “Brady” bonds), subordinated bonds, debentures and freely transferable promissory notes; and
- (ii) Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities.

**Money Market Instruments.** Money market instruments may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as “junk bonds”.

**Collective Investment Schemes.** In addition, the Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio’s other investments. Such collective investment schemes may be managed by the Manager and/or the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

---

#### Investment Restrictions

- Investments in units of other collective investment schemes are limited to a maximum of 10% of the Portfolio’s Net Asset Value.
- The Portfolio will not utilise securities lending or margin lending.

---

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the
-

“*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the risks summarised in the following sections, namely, “*Market Risks*” are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio’s global exposure is subject to an advanced risk management process which, in compliance with the UCITS Regulations, aims to ensure that on any day the relative VaR of the Portfolio will be no greater than twice the VaR of the Benchmark. The VaR of the Portfolio is a daily estimation of the maximum loss which the Portfolio may incur over a 20 Business Day holding period and is arrived at through quantitative simulations with a 99% one tailed confidence interval and using an historical observation period of at least 250 business days. This process is described in detail in the statement of risk management procedures of the Company and its appendix in respect of the Portfolio.
- The Portfolio may be leveraged up to approximately 2700% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced. This expected leverage figure is calculated using the Sum of the Notional values of the derivatives used, as required by the Central Bank. Using this methodology does not reflect any netting or hedging that the Portfolio may have in place, which will result in a reduction of risk. It is therefore not a risk-adjusted method of measuring leverage, which means this figure is higher than it otherwise would be if such netting and hedging positions would be taken into account. Investors should note that the Portfolio’s use of commodity-linked derivative instruments (such as total return swaps) to obtain long and short exposure to the commodity markets results in indirect leverage exposure for the Portfolio which is taken into account in the above calculation. While, as described above, the Portfolio measures and monitors its global exposure using the VaR approach, rather than by use of the Commitment Approach, the leverage of the Portfolio using the Commitment Approach is expected to be 140% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced.
- The Sub-Investment Manager may use forward and non-deliverable forward currency contracts, currency futures contracts and transactions, currency options, and currency swaps in order to hedge currency risk on a discretionary basis. In addition, the Sub-Investment Manager may use futures, options, swaps (including credit default swaps and swaptions) on debt securities or money market instruments, indices and interest rates to hedge investments in such instruments. Investors should note that it may not be possible or practical to hedge the Portfolio’s exposures to such instruments perfectly and that, where it deems it appropriate, the Sub-Investment Manager may take hedging positions in respect of other instruments which it considers to be suitable proxies for the Portfolio’s investments. The use of such hedging techniques may increase the risk profile of the Portfolio.

#### Typical Investor Profile

Investment in the Portfolio may be suitable for investors seeking long term capital appreciation over a medium to long term horizon, typically three years or longer. The Portfolio may have medium levels of volatility due to its investment in Emerging Market Countries’ securities and/or below investment grade securities.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.40%	0.00%
B, C2, E	0.00%	1.40%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.65%	0.00%
M	2.00%	1.40%	0.60%
P	5.00%	0.62%	0.00%

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
T	5.00%	1.80%	0.00%
U	3.00%	0.98%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 - 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C2</b>	1%	0%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

The Directors of the Company whose names appear in the “*Management and Administration*” section of the Prospectus accept responsibility for the information contained in this document. To the best of the knowledge and belief of the Directors (who have taken all reasonable care to ensure that such is the case) the information contained in this document is in accordance with the facts and does not omit anything likely to affect the importance of such information. The Directors accept responsibility accordingly.

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## EVENT DRIVEN FUND SUPPLEMENT

**21 MARCH 2024**

**This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-fund which is a separate portfolio of the Company:**

**NEUBERGER BERMAN EVENT DRIVEN FUND**

**(the “Portfolio”)**

**CONTENTS**

Definitions .....	3
Investment Risks .....	3
Distribution Policy .....	5
Subscriptions and Redemptions.....	5
Neuberger Berman Event Driven Fund .....	6

## DEFINITIONS

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in the Portfolio;
<b>Dealing Deadline</b>	11.00 am (Irish time) on the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 12.30 pm (Irish time) on the relevant Dealing Day;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of the Portfolio;
<b>Portfolio</b>	the Neuberger Berman Event Driven Fund; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC, or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

## INVESTMENT RISKS

Investment in the Portfolio carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

#### DISTRIBUTION POLICY

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the (Monthly) Gross Income Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Gross Income Distributing Classes in the Portfolio shall be declared on a quarterly basis and paid within thirty Business Days thereafter; and
- each of the other Distributing Classes in the Portfolio will be declared on a quarterly basis and paid within 30 Business Days thereafter.

#### SUBSCRIPTIONS AND REDEMPTIONS

Subscriptions for Shares in all Classes will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 22 March 2024 to 5.00 pm on 20 September 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

Except as provided below, the Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## NEUBERGER BERMAN EVENT DRIVEN FUND

**Investors should note that the Portfolio may achieve its investment objective by investing principally in financial derivative instruments as described below which may be complex and sophisticated in nature. An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. An investment in the Portfolio should be viewed as medium to long term. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

<b>Investment Objective</b>	The Portfolio seeks to generate positive market neutral, absolute risk adjusted returns with low correlation to broader equity markets through utilising event driven strategies.
-----------------------------	---

<b>Investment Approach</b>	The Sub-Investment Manager will seek to achieve the Portfolio's investment objective by taking both long and synthetic short positions in global equity securities utilising event driven strategies. Event driven strategies are based on announced or anticipated events or a series of events and on investing in the securities of companies that could be affected by the occurrence of such events. The Portfolio will take exposure to equity securities that are listed or traded on Recognised Markets in developed markets, and that are subject to or expected to be subject to corporate events including and not limited to mergers, takeover bids, exchange offers, tender offers, spin-offs, proxy fights, liquidations, recapitalisations, corporate restructurings, litigation, legislation or regulatory events, or post-bankruptcy situations. The Portfolio will take long positions in respect of equity securities that it expects to increase in value as a result of such events and take synthetic short positions in respect of equity securities that it expects to decrease in value as a result of such events.
----------------------------	--

### **Investment Strategy**

The Sub-Investment Manager will implement the following sub-strategies within the Portfolio:

- **Risk-Arbitrage**

Risk arbitrage concentrates on investments in the securities of companies that are involved in a takeover or merger. The arbitrage opportunity arises as a result of the difference between the market value of the securities purchased or synthetically shorted and the market value of those securities following the completion or termination of such transaction or the adjustment of the market value of the securities in anticipation of the transaction. This difference is known as a spread.

The investment universe is comprised of companies which are subject to definitive mergers and hostile acquisition proposals with an announced deal price. The Sub-Investment Manager actively monitors, tracks and undertakes diligence on transactions in the risk arbitrage universe that may be compatible with its investment philosophy. In conducting its analysis, the Sub-Investment Manager will use quantitative and qualitative financial data, industry data and information from a wide range of publicly-available and subscription-based sources and will also take into consideration macro-economic data and trends, which includes SEC and other public filings and on site due diligence. Investment selection is determined by ensuring that spreads offer adequate compensation as reward relative to the risks inherent in pursuing them. The Portfolio may, through the life cycle of a transaction, take exposures in anticipation of the spread closing or widening, as determined by the Sub-Investment Manager's assessment of the risk/reward balance, relative to the probability of that transaction completing, implied by fluctuations in the spread caused by changes in market values of the securities concerned.

- **Market Neutral Catalyst**

The Market neutral catalyst strategy focuses on investments in anticipation of a corporate catalyst i.e. events such as corporate reorganisations, major litigation, management changes and significant asset sales, which can have a significant impact on the valuation of securities issued by the issuers which are subject to these events.

The Sub-Investment Manager investment process is iterative and seeks to identify investments which offer the highest expected value and best trade off in terms of risk and

reward for the Portfolio. Catalyst events are typically the starting point of the Sub-Investment Manager's investment process and the research which Sub-Investment Manager conducts into the event often leads to multiple related, yet distinct, investment opportunities, with different risk/reward profiles as compared to an investment relating to the original event, allowing the Sub-Investment Manager to select the opportunity which it considers to be best for the Portfolio. Investment selection is then based on the Sub-Investment Manager's analysis of the opportunity arising from the event with the highest expected value and the best trade off of risk and reward.

- **Equity Capital Markets**

The Sub-Investment Manager may also invest in new issue and secondary issued equity securities. This strategy will focus on IPOs, secondary and follow-on issuances designed to generate a source of returns which are uncorrelated to broader market trends. In pursuing this strategy, the Sub-Investment Manager applies the same types of analysis as described above to use long and synthetic short exposures to seek to take advantage of differences between its views of the valuation of new issue and secondary issued equity securities and those of the wider market, as expressed through the issue prices for such securities.

The Portfolio will gain its exposure to long and synthetic short positions in global equity securities described above either through the use of total return swaps or through a combination of direct investments for long positions in such securities and synthetic exposures for short positions in such securities, in each case using the instruments described in the "*Instruments / Asset Classes*" section below. The Sub-Investment Manager will decide on the approach to use in order to best implement the Portfolio's investment policy at any given time, taking into account market conditions and the costs and operational risks involved in either option. The Sub-Investment Manager will keep its decisions in this regard under review on an ongoing basis and will change the approach taken where it believes it would be advantageous for the Portfolio to do so.

The Portfolio will also invest in fixed income instruments, including cash and cash equivalent instruments, to manage the collateral received or required to be posted under its total return swap exposures. The Sub-Investment Manager will manage the collateral by investing, subject to the requirements set out under "*Management of Collateral*" in the "*Portfolio Investment Techniques*" section in the Prospectus, in global fixed income debt securities and short-dated Euro-denominated bonds, to seek to opportunistically enhance the cash returns and provide liquidity and collateral cover. The Sub-Investment Manager will seek to select issuers through fundamental analysis (i.e. changes in the level of issuers' indebtedness and their impact on the creditworthiness of the issuers) and technical analysis (i.e. changes in the flows of the issue of debt securities) to seek to identify undervalued securities (i.e. those which the Sub-Investment Manager thinks are available at prices which are below their true value) and exploit investment opportunities. The process incorporates credit analysis on the issuers of the selected securities, issuers' liquidity and risk analysis, as well as monitoring traditional credit statistics, for example, coverage ratios (looking at the factor by which an issuer's liability can be covered by its income) or leverage ratios (looking at the factor by which the loss or return on an investment may exceed the initial investment).

Because the Portfolio may principally use derivatives to implement its investment policy and because derivatives may not require the Portfolio to deposit the full notional amount of the investment, the Portfolio may invest a significant amount of its assets in cash or cash equivalent instruments, money market mutual funds or other fixed income investments, as described in the "*Instruments/Asset Classes*" section of this Supplement to ensure that it has adequate cover for the margin requirements associated with such investments.

The Portfolio's net market exposure may vary in time and range from a maximum net long position of 200% to a maximum net short position of 0% of the Net Asset Value of the Portfolio, depending on the Sub-Investment Manager's analysis of the prevailing market conditions and considered in light of the investment objective of the Portfolio.

The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

---

**Benchmark**

The S&P 500 Index (Total Return, Net of tax, USD), which is a capitalisation weighted index of 500 stocks designed to measure performance of the broad economy of the US through changes in the aggregate market value of 500 stocks representing all major industries.

---

---

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

**Base Currency** US Dollars (USD)

---

**Instruments /  
Asset Classes**

The Portfolio will invest in or be exposed to the following types of assets:

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, depositary receipts and UCITS eligible partnership interests (which are effectively equivalent to shares but are issued by an issuer established as a limited partnership instead of as a company), rights, warrants, and recently issued securities of the types described above, which are unlisted but have been issued with an undertaking to apply for admission to listing on a Recognised Market within a year of issue.

**Financial Derivative Instruments (“FDIs”).** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, the Portfolio may use the following FDI, for hedging, risk or efficient portfolio management and/or investment purposes:

- Futures contracts based on UCITS eligible equity indices and interest rates and currencies may be used to achieve a profit as well as to hedge existing long positions;
- Options on currencies, equity securities and UCITS eligible equity indices may be used to achieve a profit as well as to hedge existing long positions;
- Swaps including excess return, interest rate, currency swaps and total return swaps may be used to achieve a profit as well as to hedge existing long positions. The maximum proportion of the Portfolio’s Net Asset Value that can be subject to total return swaps is 200%. The expected proportion of the Portfolio’s Net Asset Value that will be subject to total return swaps is 110%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Forwards on currencies contract may be used to hedge existing long positions; and
- Warrants (including equity warrants) and rights (including equity rights) may be used to achieve a profit as well as to hedge existing long positions.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Sub-Investment Manager may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return. UCITS-eligible indices which provide exposure to the performance of equities and details of such indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Fixed Income Securities (Debt Securities).** These securities may include both fixed and floating rate debt securities, including bonds issued by governments, government-related and corporate entities, denominated in local currencies, as well as investment grade securities, which are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies.

- Corporate bonds, bonds issued by governments, government-related and corporate entities, convertible bonds (which will not embed derivatives), bonds resulting from the restructuring of syndicated loans or bank loans (e.g. “Brady” bonds), subordinated bonds, debentures and freely transferable promissory notes;
  - Asset-backed securities, structured securities (including mortgage-backed securities such as pass-through certificates, which entitle the holders to receipt of mortgage payments and interest and principal only components of mortgage-backed securities) that derive interest and principal payments from specified assets (including residential and commercial mortgages, credit card debt and pools of other kinds of receivables, such as loans, royalties or other earnings); and
  - Deferred payment securities (securities which pay regular interest after a predetermined
-

date) and zero coupon securities.

**Money Market Instruments.** Money market instruments may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as “junk bonds”.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes (including ETFs which are structured as collective investment schemes) which are themselves exposed to investments that are similar to the Portfolio’s other investments, provided that the Portfolio may not invest more than 10% of its Net Asset Value in other collective investment schemes which themselves invest in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank’s rules, which may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 200% of their net asset value; (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**ETFs.** ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio’s other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

---

#### Investment Restrictions

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the “*Investment Restrictions*” section of the Prospectus and the UCITS Regulations.
- The Portfolio will not utilise securities lending or margin lending.

---

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the risks summarised in the following sections, namely, “*Market Risks*,” are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
  - Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
  - The Portfolio’s global exposure is subject to an advanced risk management process which, in compliance with the UCITS Regulations, aims to ensure that on any day the Absolute VaR of the Portfolio will be no greater than 4.47% of its Net Asset Value (or maximum 20% 1 Month 99% confidence VaR). The VaR of the Portfolio is a daily estimation of the
-

maximum loss which the Portfolio may incur over a one day holding period and is arrived at through quantitative simulations with a 99% one tailed confidence interval and using a historical observation period of at least 250 business days.

- The Portfolio may be leveraged up to approximately 250% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced. This expected leverage figure is calculated using the Sum of the Notional values of the derivatives used, as required by the Central Bank. Using this methodology does not reflect any netting or hedging that the Portfolio may have in place, which will result in a reduction of risk. It is therefore not a risk-adjusted method of measuring leverage, which means this figure is higher than it otherwise would be if such netting and hedging positions would be taken into account. While, as described above, the Portfolio measures and monitors its global exposure using the VaR approach, rather than by use of the Commitment Approach, the leverage of the Portfolio using the Commitment Approach is expected to be 250% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced.
- The Sub-Investment Manager may use forward and non-deliverable forward currency contracts, currency futures contracts and transactions, currency options, and currency swaps in order to hedge currency risk on a discretionary basis. In addition, the Sub-Investment Manager may use futures, options, swaps (including credit default swaps and swaptions) on money market instruments, indices and interest rates to hedge investments in such instruments. Investors should note that it may not be possible or practical to hedge the Portfolio's exposures to such instruments perfectly and that, where it deems it appropriate, the Sub-Investment Manager may take hedging positions in respect of other instruments which it considers to be suitable proxies for the Portfolio's investments. The use of such hedging techniques may increase the risk profile of the Portfolio.

**Environmental, Social and Governance ("ESG")**

The Sub-Investment Manager does not apply the ESG Policy and deems Sustainability Risks not to be relevant for the Portfolio, as the strategy of the Portfolio does not support the integration of Sustainability Risks. This Portfolio is classified as an Article 6 Portfolio.

Accordingly for the purpose of the Taxonomy Regulation, the investments underlying the Portfolio do not take into account the EU criteria for environmentally sustainable economic activities.

Notwithstanding the above, the Sub-Investment Manager shall apply the (i) Controversial Weapons Policy; and (ii) the Thermal Coal Involvement Policy. Further details on these screening/exclusion policies are set out in the "Sustainable Investment Criteria" section of the Prospectus.

**Typical Investor Profile**

Investment in the Portfolio may be suitable for investors seeking returns over a medium to long term horizon, typically three years or longer. Investors need to be comfortable with the risks associated with the Portfolio and should be prepared to accept periods of market volatility and the risks of the capital markets in pursuit of long term goals.

**Fees and Expenses**

The Manager may be entitled to receive a performance fee payable out of the Portfolio's assets in respect of each PF Class in the Portfolio. All Classes in the Portfolio are PF Classes.

**DEFINITIONS**

<p><b>Calculation Period</b></p>	<p>The Calculation Period shall normally run from 1 January to 31 December in each year except that:</p> <ul style="list-style-type: none"> <li>• in the case of the initial issue of Shares in each PF Class, the first Calculation Period will run from the date of issue to 31 December;</li> <li>• in the case of the termination of a PF Class, the Calculation Period will terminate on the date of the termination; and</li> </ul>
----------------------------------	---

	<ul style="list-style-type: none"> <li>in the case of the termination of the Management Agreement in any year, the Calculation Period will terminate on the date of the termination.</li> </ul> <p>The first value used in determining the first Performance Fee for a PF Class shall be the Initial Offer Price.</p>
<b>Crystallisation</b>	The point at which any Performance Fee becomes payable to the Manager. Crystallisation will occur either at the end of the Calculation Period or on a Dealing Day on which a Shareholder redeems or exchanges all or part of its Shareholding.
<b>High Water Mark</b>	The greater of: (i) the initial offer price per Share; and (ii) the Net Asset Value per Share at the end of any previous Calculation Period in respect of which a Performance Fee was paid.

## METHODOLOGY

For each Calculation Period, a Performance Fee in respect of each PF Class in issue becomes due in the event that the Net Asset Value per Share at the end of the Calculation Period exceeds the High Water Mark (net of all costs before the deduction of any accrued Performance Fee, provided that in doing so it is in the Shareholder's best interest) for that particular PF Class.

The Performance Fee will be calculated on each Dealing Day and will be equal to 20% of the amount by which the percentage growth in the Net Asset Value per Share over the Calculation Period exceeds that of the High Water Mark, with the exception of the I5 Classes, in respect of which the Performance Fee will be equal to 15% of the amount by which the percentage growth in the Net Asset Value per Share over the Calculation Period exceeds that of the High Water Mark.

The Performance Fee will be accrued on each Dealing Day and will form part of the Net Asset Value per Share for each PF Class where applicable. Any Performance Fee accrual on a Dealing Day will be superseded by any accrual made on the following Dealing Day up to the last Dealing Day of the Calculation Period.

In all cases the Net Asset Value per Share used in the calculation of the Performance Fee is unswung, i.e. it does not include any adjustment for swing pricing.

No Performance Fee will be paid until the Net Asset Value per Share exceeds the High Water Mark and such fee is only payable on the outperformance of the Net Asset Value per Share over the High Water Mark as described above.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level and as no series accounting is applied in respect of the Performance Fee, they may be charged a Performance Fee even where the Net Asset Value of their Shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of a Calculation Period.

The Performance Fee will be accrued in the Net Asset Value on each Dealing Day and will normally be payable to the Manager in arrears within 30 Business Days of the end of each Calculation Period. However, in the case of Shares redeemed during a Calculation Period, the accrued performance fee in respect of those Shares will be payable to the Manager within 30 Business Days of the date of redemption.

Crystallised Performance Fees shall remain in the relevant PF Class (but shall not participate in subsequent gains and losses of the relevant Class) until paid to the Manager and shall not be used or made available to satisfy redemptions or pay any fees and expenses of the relevant PF Class.

The Depositary shall verify the calculation of the Performance Fee and ensure that it is not open to the possibility of manipulation.

The Directors may, with the consent of the Manager, reduce the Performance Fee payable by any PF Class. Performance Fees are payable on realised and unrealised capital gains, which for the avoidance of doubt includes investment income, taking into account realised and unrealised losses at the end of the Calculation Period. Consequently, Performance Fees may be paid on unrealised gains which may subsequently never be realised.

## WORKED EXAMPLES

Examples 1 to 3 show how the Performance Fee is calculated, accrued and crystallised. All valuation points fall within one Calculation Period.

Valuation point	1	2	3	4
NAV of PF Class Shares	US\$10.000	US\$10.100	US\$9.900	US\$10.200
High Water Mark	US\$10.000	US\$10.000	US\$10.000	US\$10.000

### Example 1

Investor A acquires PF Class Shares at valuation point 1 for US\$10.000.

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$20\% \times (\text{US}\$10.100 - \text{US}\$10.000) = \text{US}\$0.020$	Accrued in NAV
Valuation point 3		None: NAV < High Water Mark	
Valuation point 4		$20\% \times (\text{US}\$10.200 - \text{US}\$10.000) = \text{US}\$0.040$	Accrued in NAV

### Example 2

Investor B acquires PF Class Shares at valuation point 3 for US\$9.900.

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1			
Valuation point 2			
Valuation point 3	US\$9.900		
Valuation point 4		$20\% \times (\text{US}\$10.200 - \text{US}\$10.000) = \text{US}\$0.040$	Accrued in NAV

### Example 3

Investor C acquires PF Class Shares at valuation point 1 for US\$10.000 and redeems at valuation point 4.

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$20\% \times (\text{US}\$10.100 - \text{US}\$10.000) = \text{US}\$0.020$	Accrued in NAV
Valuation point 3		None: NAV < High Water Mark	
Valuation point 4		$20\% \times (\text{US}\$10.200 - \text{US}\$10.000) = \text{US}\$0.040$	US\$0.030

## SCENARIOS<sup>1</sup>

All scenarios show the value of US\$100K invested in Shares in a PF Class

Scenario 1 illustrates the effect of the NAV performance being 5% per annum in three consecutive years

Scenario 2 illustrates the effect of the NAV growth being 10%, -5%, and 4% in three consecutive years

Scenario 3 illustrates the effect of the NAV growth at 4%, 0% and -2% in three consecutive years

<sup>1</sup> Investors should note that these scenarios are purely intended to be illustrative of the impact of different investment performance and have been simplified in some non-material respects to aid this understanding. For example, management fees and other expenses are in reality accrued on a daily basis but their calculation is presented in a simplified manner here for ease of review.

**Scenario 1**

	<b>Period One</b>	<b>Period Two</b>	<b>Period Three</b>
	5% growth	5% growth	5% growth
<b>Gross Value of PF Class Shares at year end</b>	US\$105,000	US\$108,053	US\$111,348
<b>Management Fee 1.00%</b>	US\$1,050	US\$1,081	US\$1,113
<b>Other expenses 0.30%</b>	US\$315	US\$324	US\$334
<b>Initial Net Asset Value of PF Class Shares at year end (NAV)</b>	US\$103,635	US\$106,649	US\$109,901
<b>High Water Mark</b>	US\$100,000	US\$103,635	US\$106,649
<b>Performance Fee (20% over the High Water Mark)</b>	US\$727 As NAV > High Water Mark, 20% x (US\$103,635 - US\$100,000)	US\$603 As NAV > High Water Mark, 20% x (US\$106,649 - US\$103,635)	US\$650 As NAV > High Water Mark, 20% x (US\$109,901 - US\$106,649)
<b>Total Fees Paid</b>	US\$2,092	US\$2,007	US\$2,098
<b>Final Net Asset Value of PF Class Shares at year end</b>	US\$102,908	US\$106,046	US\$109,250

**Scenario 2**

	<b>Period One</b>	<b>Period Two</b>	<b>Period Three</b>
	10% growth	-5% growth	4% growth
<b>Gross Value of PF Class Shares at year end</b>	US\$110,000	US\$101,513	US\$104,201
<b>Management Fee 1.00%</b>	US\$1,100	US\$1,015	US\$1,042
<b>Other expenses 0.30%</b>	US\$330	US\$305	US\$313
<b>Initial Net Asset Value of PF Class Shares at year end (NAV)</b>	US\$108,570	US\$100,194	US\$102,847
<b>High Water Mark</b>	US\$100,000	US\$108,570	US\$108,570
<b>Performance Fee (20% over the High Water Mark)</b>	US\$1,714 As NAV > High Water Mark, 20% x (US\$108,570 - US\$100,000)	US\$0 High Water Mark > NAV	US\$0 High Water Mark > NAV
<b>Total Fees Paid</b>	US\$3,144	US\$1,320	US\$1,355
<b>Final Net Asset Value of PF Class Shares at year end</b>	US\$106,856	US\$100,194	US\$102,847

**Scenario 3**

	<b>Period One</b>	<b>Period Two</b>	<b>Period Three</b>
	4% growth	0% growth	-2% growth
<b>Gross Value of PF Class Shares at year end</b>	US\$104,000	US\$102,960	US\$99,892
<b>Management Fee 1.00%</b>	US\$1,040	US\$1,030	US\$999

<b>Other expenses 0.30%</b>	US\$312	US\$309	US\$300
<b>Initial Net Asset Value of PF Class Shares at year end (NAV)</b>	US\$102,648	US\$101,622	US\$98,593
<b>High Water Mark</b>	US\$100,000	US\$102,648	US\$102,648
<b>Performance Fee (20% over the High Water Mark)</b>	US\$530 As NAV > High Water Mark, 20% x (US\$102,648 - US\$100,000)	US\$0 High Water Mark > NAV	US\$0 High Water Mark > NAV
<b>Total Fees Paid</b>	US\$1,882	US\$1,338	US\$1,299
<b>Final Net Asset Value of PF Class Shares at year end</b>	US\$102,960	US\$101,930	US\$98,893

### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	2.00%	0.00%
B, C2, E	0.00%	1.80%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	1.00%	0.00%
M	2.00%	2.00%	0.80%
P	5.00%	0.95%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.50%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C2</b>	1%	0%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

Notwithstanding the information set out under the “Classes” section within “Annex II – Share Class Information” to the Prospectus, please note that, subject to any transitional period or other arrangement agreed with Shareholders in the relevant Classes, Shares in the Category B, C2 and E Classes will automatically convert into Shares in the corresponding T Class, at no additional cost to holders of such Shares, upon the expiry of four years (Category B Classes), two years (Category C2 Classes) and three years (Category E Classes) from the date of the initial subscription into the relevant B, C2 or E Class.

The Directors of the Company whose names appear in the “*Management and Administration*” section of the Prospectus accept responsibility for the information contained in this document. To the best of the knowledge and belief of the Directors (who have taken all reasonable care to ensure that such is the case) the information contained in this document is in accordance with the facts and does not omit anything likely to affect the importance of such information. The Directors accept responsibility accordingly.

---

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## TACTICAL MACRO FUND SUPPLEMENT

**21 MARCH 2024**

**This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-fund which is a separate portfolio of the Company:**

**NEUBERGER BERMAN TACTICAL MACRO FUND**

**(the “Portfolio”)**

**CONTENTS**

Definitions	3
Investment Risks	3
Distribution Policy	5
Subscriptions and Redemptions	5
Neuberger Berman Tactical Macro Fund	6

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in the Portfolio;
<b>Dealing Deadline</b>	11.00 am (Irish time) on the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 12.30 pm (Irish time) on the relevant Dealing Day;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of the Portfolio, provided that such time shall always be after the Dealing Deadline;
<b>Portfolio</b>	the Neuberger Berman Tactical Macro Fund; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC, or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolio carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the (Monthly) Gross Income Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Gross Income Distributing Classes in the Portfolio shall be declared on a quarterly basis and paid within thirty Business Days thereafter; and
- each of the other Distributing Classes in the Portfolio will be declared on a quarterly basis and paid within 30 Business Days thereafter.

### Subscriptions and Redemptions

Subscriptions for Shares in all Classes will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 22 March 2024 to 5.00 pm on 20 September 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

Except as provided below, the Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Tactical Macro Fund

**Investors should note that the Portfolio may achieve its investment objective by investing principally in financial derivative instruments as described below which may be complex and sophisticated in nature. An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. An investment in the Portfolio should be viewed as medium to long term. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

<b>Investment Objective</b>	The Portfolio seeks to achieve positive returns regardless of the market environment by identifying market pricing imbalances across a broad range of asset classes, markets and regions in a highly risk-managed framework.
<b>Investment Approach</b>	<p>The Manager and the Sub-Investment Manager will seek to achieve the Portfolio's investment objective by identifying key aspects of the macro environment to develop a universe of investment theses, based on the Manager's and the Sub-Investment Manager's analysis of key aspects of the macro environment which are considered in order to select investments.</p> <p>In order to understand and identify the macro environment and/or possible changes in the underlying economic or market conditions, which may be the driver behind changes in asset prices, the Manager and the Sub-Investment Manager will assess the following factors to build the investment regime framework:</p> <ol style="list-style-type: none"> <li>1) Global Growth / Inflation Environment: <ul style="list-style-type: none"> <li>• Trend growth and its characteristics across regions</li> <li>• Key drivers of global growth and inflection points</li> <li>• Regional inflation trends</li> <li>• Growth and inflation relative to relevant central bank targets</li> </ul> </li> </ol> <p>For example, the Manager and the Sub-Investment Manager will assess the potential for tighter financial conditions globally (i.e. increasing difficulty for individuals, business or governments to borrow money for reasons such as increasing interest rates or reduced availability of credit) to lead to a worsening growth / inflation mix, as US equity valuations decline, fiscal stimuli (such as increased government spending or tax cuts) fade and US monetary policy shifts its focus between inflation and growth.</p> <ol style="list-style-type: none"> <li>2) Monetary And Fiscal Policy: <ul style="list-style-type: none"> <li>• Central banks' and fiscal policy-makers' objectives</li> <li>• Policy effectiveness</li> <li>• Impact of policies on asset pricing</li> <li>• Financial conditions indices</li> </ul> </li> </ol> <p>This may be used by the Manager and the Sub-Investment Manager, for example, in identifying the impact of tightening financial conditions as financial regulators (responsible for both overseeing financial markets and regulated institutions) move away from monetary policies that aim to stimulate economic growth (such as lowering interest rates, increased spending or lowering bank reserve requirements) and towards those that look to contract money supply to control inflation (such as increasing interest rates, decreasing spending or raising bank reserve requirements).</p> <ol style="list-style-type: none"> <li>3) Asset Valuation and Trends: <ul style="list-style-type: none"> <li>• Identification of trending assets and factors</li> <li>• Cross asset dislocations (disconnections between asset classes, typically based on a variable macroeconomic factor e.g. equity volatility reverting slower than fixed income volatility in 2020)</li> </ul> </li> </ol>

- Valuation anomalies across asset classes

This may be used by the Manager and the Sub-Investment Manager, for example, to monitor price trends and resultant valuation extremes to identify where trends are entrenched and certain assets are considered cheap or expensive in comparison to their past performance.

For example, when a trend has become entrenched and certain assets are considered cheap or expensive due to the persistence of the current prevailing trends and conditions relative to the past, any perceived shift can cause significant price dislocations. However, such dislocations will often retrace as the shorter term change to investor flows will not change the drivers of the current prevailing trends and conditions. The Manager and the Sub-Investment Manager will monitor price trends and resultant valuation extremes as they can often signpost when the market has perceived an effective shift in policy, which will enable it to take advantage of the dislocation and / or any retraction.

#### 4) Structural Drivers:

- Identifying the dominant investor preferences and biases
- Understanding the motives of policy makers
- Global liquidity (relative vs. absolute)
- Overall debt levels and composition (public/private)

This may be used by the Manager and the Sub-Investment Manager, for example, in identifying whether investor preferences for liquidity in an economic environment in which growth is uncertain (i.e. investors becoming more risk averse and preferring to hold more liquid assets such as cash or money market instruments in uncertain times) is distorting valuations, such that they may not accurately reflect assets' true values.

#### 5) Market Imbalances:

- Identification of asset valuation extremes (when an asset goes outside of its historical long term average valuation bands)
- Identification of positioning extremes
- Implications of a policy shift and/or conclusion of the current policy being implemented
- Exchange rate/interest rate stability

Monitoring market imbalances in valuation and in positioning may be used by the Manager and the Sub-Investment Manager to assess whether regimes or policies in a market are changing.

The above factors are assessed using a wide range of indicators, including, but not limited to, relative interest rates across geographies, relative asset valuations across asset classes and trend dynamics across equities, 10-year government bonds and G7 currencies. The sources for these indicators can be proprietary research undertaken by the Manager and the Sub-Investment Manager or by other related entities, external research reports, such as reports published by third-parties in the market, or other publicly available data. The Manager and the Sub-Investment Manager have also built a proprietary dashboard which leverages external sources, such as Bloomberg, to synthesize key data.

The Manager and the Sub-Investment Manager are aware that certain macro environment issues may change or the investment regime may eventually come to an end, so it continually monitors market imbalances in valuation and in positioning. The Manager and the Sub-Investment Manager are of the view that identifying these extremes does not constitute an investment strategy in its own right. However, the actual investment strategy of the Portfolio is being aware of what has caused the macro environment issue or investment regime and what catalysts could cause such imbalances to unwind and provide opportunities that arise from market imbalances or extreme events that have the potential to cause significant movements in macro-economic variables, such as GDP, employment and consumption. While these events occur infrequently, they can provide important investment opportunities for the Manager and the Sub-Investment Manager. This is because even if the Manager or the Sub-Investment Manager are unable to capitalise on such a move, as both positive and negative market movements can occur quickly and violently, it is important that

the Manager and the Sub-Investment Manager are aware of these movements as soon as possible, as such issues are typically the first to signal a break in the current underlying assumptions embedded in investors' portfolios.

The Manager and the Sub-Investment Manager will utilise the investment regime framework to consider, by assessing market pricing and identifying the imbalances that exist within those investment theses, the various investment positions which can be implemented to benefit the Portfolio. Positions will be generally be characterised into the following investment theses - thematic, catalyst or diversifiers, as described below:

- **Thematic**

Thematic positions seek to capture relative out/under-performance of an asset or cross-asset pair and may include thematic equity baskets based on an investment regime with a target holding period of 3 -12 months. An example could be where the Manager and the Sub-Investment Manager believe that financial conditions will tighten significantly, as interest rates are raised and the growth outlook slows, and takes positions in interest rates or government debt of different durations to reflect this belief.

- **Catalyst**

Catalyst positions seek to capture idiosyncratic price moves in an asset class or in the cross asset class space where attractive risk-rewards are presented due to flow, event or investor behaviour, with a typical target holding period of 1-3 months, although the period for which a position is held will be determined more by price than by a target time period. An example could be where the Manager and the Sub-Investment Manager believe that a market has not adequately reflected the risks of inflation and sells call options in respect of stocks which appear to it to be overpriced while also buying put options in respect of stocks which appear to it to be under-priced.

- **Diversifiers**

Diversifier positions seek to capture low cost or positive expected value hedges that offer diversification benefits. An example could be where the Manager and the Sub-Investment Manager add an additional position to hedge a thematic position already taken to reflect another thesis, to diversify the Sub-Fund's exposure away from that thematic position as a defensive measure.

Examples of how the investment process utilises the investment regime framework to implement the investment theses include:

- **Thematic**

Through evaluating the "Global Growth / Inflation Environment" factor in 2022, the Manager and the Sub-Investment Manager concluded that U.S. inflation would remain at elevated levels. It assessed the various approaches to implementing positions aligned with this conclusion and felt that a trade executed through a short 5-year U.S. interest rate futures contract had potential to generate a positive return, due to the expectation that interest rates would increase in the medium term.

- **Catalyst**

Through assessing the "Monetary And Fiscal Policy" factor, the Manager and the Sub-Investment Manager developed a view in early 2022 that the Bank of Japan would need to take action to address growing inflation concerns. The Manager and the Sub-Investment Manager believed that a short U.S. Dollar / long Japanese Yen trade, in advance of the Bank of Japan meetings in January 2022 at which it was expected that Japanese interest rates would be raised, would be an appropriate approach to take advantage of this expected action by the central bank, to benefit from the expected short term increase in the value of the Yen relative to the US Dollar.

- **Diversifiers**

Through evaluating the "Asset Valuation and Trends" factor and given broad market volatility in early 2023, the Manager and the Sub-Investment Manager believed that a short position in respect of the S&P 500 index would be a prudent trade to balance other positions, particularly those in interest rates, as equity values may be expected to decline when interest rates increase.

The Portfolio will gain its exposure to the above investment theses by investing in highly liquid instruments, primarily using Financial Derivative Instruments, such as futures, swaps,

forwards, options and total return swaps, to obtain exposure to the types of asset types described in the “*Instruments/Asset Classes*” section below. The Portfolio may also invest in directly in the asset types described in the “*Instruments/Asset Classes*” section below.

The Portfolio will also invest in fixed income instruments, including cash and cash equivalent instruments, to manage the collateral received or required to be posted under its total return swap exposures. The Manager and the Sub-Investment Manager will manage the collateral by investing, subject to the requirements set out under “*Management of Collateral*” in the “*Portfolio Investment Techniques*” section in the Prospectus, in global fixed income debt securities and short-dated Euro-denominated bonds, to seek to opportunistically enhance the cash returns and provide liquidity and collateral cover. The Manager and the Sub-Investment Manager will seek to select issuers through fundamental analysis (i.e. changes in the level of issuers’ indebtedness and their impact on the creditworthiness of the issuers) and technical analysis (i.e. changes in the flows of the issue of debt securities) to seek to identify undervalued securities (i.e. those which the Manager and the Sub-Investment Manager think are available at prices which are below their true value) and exploit investment opportunities. The process incorporates credit analysis on the issuers of the selected securities, issuers’ liquidity and risk analysis, as well as monitoring traditional credit statistics, for example, coverage ratios (looking at the factor by which an issuer’s liability can be covered by its income) or leverage ratios (looking at the factor by which the loss or return on an investment may exceed the initial investment).

Because the Portfolio may principally use derivatives to implement its investment policy and because derivatives may not require the Portfolio to deposit the full notional amount of the investment, the Portfolio may invest a significant amount of its assets in cash or cash equivalent instruments, money market mutual funds or other fixed income investments, as described in the “*Instruments/Asset Classes*” section of this Supplement to ensure that it has adequate cover for the margin requirements associated with such investments.

Securities invested in by the Portfolio will be listed, dealt or traded on Recognised Markets globally, without any particular focus on any one industrial sector and, in the case of debt securities, may be rated investment grade or below by a Recognised Rating Agency. The Portfolio may invest in securities issued by companies located in, and governments of, Emerging Market Countries, which may involve additional risk, relative to investment in more developed economies.

Risk allocation in the Portfolio will be based on perceived opportunity sets and capital at risk. At times the Portfolio may be highly concentrated, but will always seek to be highly liquid. Due to the nature of the investment strategy, the Portfolio generally only trades a limited number of positions at a given time, potentially leading to a risk of position concentration.

The Portfolio is actively managed and does not intend to track the Benchmark which is included below for performance comparison purposes.

This Portfolio is classified as an Article 6 Portfolio under SFDR.

<b>Benchmark</b>	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index.  Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.
<b>Base Currency</b>	US Dollars (USD)
<b>Instruments / Asset Classes</b>	The Portfolio will invest in or be exposed to the following types of assets: <b>Financial Derivative Instruments (“FDIs”).</b> Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, the Portfolio may use the following FDI, for hedging, risk or efficient portfolio management and/or investment purposes: <ul style="list-style-type: none"> <li>• Futures contracts based on UCITS eligible equity indices, interest rates and currencies may be used to achieve a profit as well as to hedge existing long positions;</li> <li>• Options on currencies, equity securities and UCITS eligible equity and bond indices may be used to achieve a profit as well as to hedge existing long positions;</li> </ul>

- Swaps, including excess return swaps, equity swaps, interest rate swaps, swaps on UCITS eligible indices (including exposure to commodity indices that have been cleared in advance by the Central Bank for use by UCITS), currency swaps, credit default swaps, swaptions and total return swaps may be used to achieve a profit as well as to hedge existing long positions. The maximum proportion of the Portfolio's Net Asset Value that can be subject to total return swaps is 200%. The expected proportion of the Portfolio's Net Asset Value that will be subject to total return swaps is 50%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Forwards on currencies contract may be used to achieve profit as well as to hedge existing long positions and
- Rights (including equity rights) may be used to achieve a profit as well as to hedge existing long positions.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Manager and the Sub-Investment Manager may be invested in the other types of securities listed below. The Manager and the Sub-Investment Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return. UCITS-eligible indices which provide exposure to the performance of equities and details of such indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Fixed Income Securities (Debt Securities).** These securities may include both fixed and floating rate debt securities, including bonds issued by governments, government-related and corporate entities, denominated in local currencies, as well as investment grade securities, which are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies.

- Corporate bonds, bonds issued by governments, government-related and corporate entities, convertible bonds (which will not embed derivatives), bonds resulting from the restructuring of syndicated loans or bank loans (e.g. "Brady" bonds), subordinated bonds, debentures and freely transferable promissory notes;
- Traded certificates and notes that derive interest and principal payments from specified assets (including commodities).
- Asset-backed securities, structured securities (including mortgage-backed securities such as pass-through certificates, which entitle the holders to receipt of mortgage payments and interest and principal only components of mortgage-backed securities) that derive interest and principal payments from specified assets (including residential and commercial mortgages, credit card debt and pools of other kinds of receivables, such as loans, royalties or other earnings); and
- Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities.

**Money Market Instruments.** Money market instruments may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**ETFs.** ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The

ETFs will operate on the principle of risk spreading and will not be leveraged.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, depositary receipts and UCITS eligible partnership interests (which are effectively equivalent to shares but are issued by an issuer established as a limited partnership instead of as a company), rights and recently issued securities of the types described above, which are unlisted but have been issued with an undertaking to apply for admission to listing on a Recognised Market within a year of issue.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes (including ETFs which are structured as collective investment schemes and money market funds) which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% of its Net Asset Value in other collective investment schemes which themselves invest in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 200% of their net asset value; (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

#### Investment Restrictions

- The Portfolio's exposure to commodities will not exceed 15% of its Net Asset Value.
- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the "Investment Restrictions" section of the Prospectus and the UCITS Regulations.
- The Portfolio will not utilise securities lending or margin lending.

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the "Investment Risks" section of the Prospectus. While investors should read and consider the entire "Investment Risks" section of the Prospectus, the risks summarised in the following sections, namely, "Market Risks:" are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio's global exposure is subject to an advanced risk management process which, in compliance with the UCITS Regulations, aims to ensure that on any day the Absolute VaR of the Portfolio will be no greater than 4.47% of its Net Asset Value (or maximum 20% 1 Month 99% confidence VaR). The VaR of the Portfolio is a daily estimation of the maximum loss which the Portfolio may incur over a one day holding period and is arrived at through quantitative simulations with a 99% one tailed confidence interval and using a historical observation period of at least 250 business days.
- The Portfolio may be leveraged up to approximately 450% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced. This expected leverage figure is calculated using the Sum of the Notional values of the derivatives used, as required by the Central Bank. Using this methodology does not reflect any netting or hedging that the Portfolio may have in place, which will result in a reduction of risk. It is therefore not a risk-adjusted method of measuring leverage, which means this figure is higher than it otherwise would be if such

netting and hedging positions would be taken into account. While, as described above, the Portfolio measures and monitors its global exposure using the VaR approach, rather than by use of the Commitment Approach, the leverage of the Portfolio using the Commitment Approach is expected to be 250% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced.

- The Manager and the Sub-Investment Manager may use forward and future currency contracts in order to hedge currency risk, for efficient portfolio management and/or for investment purposes, in each case on a discretionary basis. In addition, the Manager and the Sub-Investment Manager may use, swaps (including credit default swaps and swaptions) on money market instruments, indices and interest rates to hedge investments in such instruments. The use of such hedging techniques may increase the risk profile of the Portfolio.

#### **Environmental, Social and Governance ("ESG")**

The Manager and the Sub-Investment Manager do not apply the ESG Policy and deems Sustainability Risks not to be relevant for the Portfolio, as the strategy of the Portfolio does not support the integration of Sustainability Risks.

Accordingly for the purpose of the Taxonomy Regulation, the investments underlying the Portfolio do not take into account the EU criteria for environmentally sustainable economic activities.

Notwithstanding the above, the Manager and the Sub-Investment Manager shall apply the (i) Controversial Weapons Policy; and (ii) the Thermal Coal Involvement Policy. Further details on these screening/exclusion policies are set out in the "*Sustainable Investment Criteria*" section of the Prospectus.

#### **Typical Investor Profile**

Investment in the Portfolio may be suitable for investors seeking returns over a medium to long term horizon, typically three years or longer. Investors need to be comfortable with the risks associated with the Portfolio and should be prepared to accept periods of market volatility and the risks of the capital markets in pursuit of long term goals.

#### **Performance Fee**

The Manager and the Sub-Investment Manager may also be entitled to receive a performance fee (the "**Performance Fee**") payable out of the Portfolio's assets and as described more fully below. All Classes in the Portfolio are PF Classes.

#### *Definitions*

<b>Benchmark</b>	USD Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD)
	EUR Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - EUR Hedged)
	GBP Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - GBP Hedged)
	CHF Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - CHF Hedged)
	JPY Hedged Classes	ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return - JPY Hedged)
	<p>The Benchmark is a widely used benchmark for short-term interest rates, providing an indication of the average rates at which banks could obtain wholesale, unsecured funding for set periods in particular currencies.</p> <p>For Classes denominated in currencies other than those provided for above, the Benchmark will be the ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index (Total Return, USD) hedged to the relevant class currency, as this better reflects an appropriate comparator for investors in those Classes.</p>	
<b>Calculation Period</b>	<p>The Calculation Period shall normally run from 1 January to 31 December in each year except that:</p> <ul style="list-style-type: none"> <li>• in the case of the initial issue of Shares in each Class, the first Calculation Period will</li> </ul>	

	<p>run from the date of issue to 31 December of the following year;</p> <ul style="list-style-type: none"> <li>• in the case of the termination of a Class, the Calculation Period will terminate on the date of the termination; and</li> <li>• in the case of the termination of the Manager and/or the Sub-Investment Manager, the Calculation Period will terminate on the date of the termination.</li> </ul>
<b>Crystallisation</b>	The point at which any Performance Fee becomes payable to the Manager and the Sub-Investment Manager. Crystallisation will occur (i) at the end of the Calculation Period; (ii) at the termination of the appointment of the Manager and/or the Sub-Investment Manager; or (iii) on a Dealing Day on which a Shareholder redeems or exchanges all or part of its Shareholding.
<b>Outperformance</b>	The excess performance of the Net Asset Value per Share over the performance of the Benchmark during the Calculation Period.

### *Methodology*

For each Calculation Period, a Performance Fee in respect of each Class in issue becomes due in respect of any Outperformance, i.e. the excess performance of the Net Asset Value per Share (net of all costs before the deduction of any accrued Performance Fee, provided that in doing so it is in the Shareholder's best interest) over the performance of the Benchmark applicable to that particular Class during the Calculation Period. The Performance Fee will be calculated on each Dealing Day and will be up to 20% of the Outperformance applicable to that particular Class over the same period.

In the event that the performance of a Class over a Calculation Period is less than that of the Benchmark, no Performance Fee shall be payable in respect of that Class until such cumulative underperformance relative to its Benchmark has been recovered.

In the event that the Class has achieved Outperformance over a Calculation Period, a Performance Fee shall be payable in respect of that Class. Upon payment the Benchmark will be reset, this process ensures the Net Asset Value per Share and the Benchmark start from the same place at the start of the calculation period. Accordingly for the next Calculation Period, the commencing Benchmark value will equal the Net Asset Value in respect of the Class on which the performance fee was paid i.e. if the Net Asset Value were to equal 110 at the end of a Calculation Period in which a Performance Fee was paid, the Benchmark value at the start of the following Calculation Period would also equal 110.

Shareholders should note that, as the Performance Fee is payable on the outperformance over the Benchmark, they may be charged a Performance Fee where the Net Asset Value of their Shares has declined but to a lesser extent than the Benchmark.

Shareholders should note that, as the Performance Fee is calculated at Class level and not at an individual Shareholder level and as no series accounting is applied in respect of the Performance Fee, they may be charged a Performance Fee even where the Net Asset Value of their Shares has remained the same or dropped, for example, where Shareholders purchase or redeem Shares at points other than the start and end of a Calculation Period.

The Performance Fee will be calculated and accrued daily as at each Valuation Point. The Performance Fee is calculated on the unswung Net Asset Value per Share, i.e. before any adjustment for swing pricing (for more information on "swing pricing" please see the "*Determination of Net Asset Value – Adjustments of Valuations and Swing Pricing*" section of the Prospectus).

The Performance Fee will normally be payable to the Manager and the Sub-Investment Manager in arrears within 30 Business Days of 31 December each year. However, in the event of the Crystallisation of the Performance Fee during a Calculation Period, the accrued Performance Fee in respect of such amounts will be payable within 30 Business Days of the end of the calendar quarter during which the Crystallisation occurred.

Crystallised Performance Fees shall remain in the Portfolio until paid to the Manager and the Sub-Investment Manager and shall not participate in subsequent gains and losses of the Portfolio. Crystallised Performance Fees shall not be used or made available to satisfy redemptions or pay any fees and expenses of the Portfolio or the Company (other than Performance Fees payable to the Manager and the Sub-Investment Manager).

The Depository shall verify the calculation of any Performance Fee and ensure that it is not open to the possibility of manipulation.

Performance Fees are payable on realised and unrealised capital gains, which for the avoidance of doubt includes investment income, taking into account realised and unrealised losses at the end of the Calculation Period. Consequently, Performance Fees may be paid on unrealised gains which may subsequently never be realised.

### WORKED EXAMPLES

Examples 1 to 3 show how the Performance Fee is calculated, accrued and crystallised. All valuation points fall within one Calculation Period.

Valuation point	1	2	3	4
NAV of Class Shares (Before Performance Fee Accrual)	US\$10.000	US\$10.100	US\$9.900	US\$10.200
Benchmark	US\$10.000	US\$10.050	US\$10.100	US\$10.150

#### Example 1

Investor A acquires Shares at valuation point 1 for US\$10.000 per Share

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$20\% \times (\text{US\$}10.100 - \text{US\$}10.050) = \text{US\$}0.01$	Accrued in NAV
Valuation point 3		None: NAV < Benchmark	
Valuation point 4		$20\% \times (\text{US\$}10.200 - \text{US\$}10.150) = \text{US\$}0.01$	Accrued in NAV

#### Example 2

Investor B acquires Shares at valuation point 3 for US\$9.900 per Share

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1			
Valuation point 2			
Valuation point 3	US\$9.900		
Valuation point 4		$20\% \times (\text{US\$}10.200 - \text{US\$}10.150) = \text{US\$}0.01$	Accrued in NAV

#### Example 3

Investor C acquires Shares at valuation point 1 for US\$10.000 per Share and redeems at valuation point 4

	Acquisition of Shares	Accrued Performance Fee	Crystallised Performance Fee
Valuation point 1	US\$10.000		
Valuation point 2		$20\% \times (\text{US\$}10.100 - \text{US\$}10.050) = \text{US\$}0.01$	Accrued in NAV
Valuation point 3		None: NAV < Benchmark	
Valuation point 4		$20\% \times (\text{US\$}10.200 - \text{US\$}10.150) = \text{US\$}0.01$	US\$0.01

**SCENARIOS<sup>1</sup>**

All scenarios show the value of US\$100K invested in Shares.

**Scenario 1** illustrates the effect of the NAV performance being 5% per annum and the Benchmark return being 3% in three consecutive years

**Scenario 2** illustrates the effect of the NAV growth being 6%, -4%, and 6% and the Benchmark return being 3%, -2% and 3% in three consecutive years

**Scenario 3** illustrates the effect of the NAV growth at 8%, 0% and -1% and the Benchmark return being 4%, 0% and -5% in three consecutive years

**Scenario 1**

	<b>Period One</b>	<b>Period Two</b>	<b>Period Three</b>
	5% growth	5% growth	5% growth
<b>Gross Value of Class Shares at year end</b>	US\$105,000	US\$108,948	US\$113,044
<b>Management Fee 0.80%</b>	US\$840	US\$872	US\$904
<b>Other expenses 0.20%</b>	US\$210	US\$218	US\$226
<b>Initial Net Asset Value of Class Shares at year end</b>	US\$103,950	US\$107,858	US\$111,914
<b>Benchmark</b>	US\$103,000	US\$106,873 <sup>2</sup>	US\$110,891 <sup>2</sup>
<b>Performance Fee (20% of NAV outperformance over Benchmark)</b>	US\$190 As NAV > Benchmark, 20% x (US\$103,950 - US\$103,000)	US\$197 As NAV > Benchmark, 20% x (US\$107,858 - US\$106,873)	US\$205 As NAV > Benchmark, 20% x (US\$111,914 - US\$110,891)
<b>Total Fees Paid</b>	US\$1,240	US\$1,287	US\$1,335
<b>Final Net Asset Value of Class Shares at year end</b>	US\$103,760	US\$107,662	US\$111,709

**Scenario 2**

	<b>Period One</b>	<b>Period Two</b>	<b>Period Three</b>
	6% growth	-4% growth	6% growth
<b>Gross Value of Class Shares at year end</b>	US\$106,000	US\$100,370	US\$105,328
<b>Management Fee 0.80%</b>	US\$848	US\$803	US\$843
<b>Other expenses 0.20%</b>	US\$212	US\$201	US\$211
<b>Initial Net Asset Value of Class Shares at year end</b>	US\$104,940	US\$99,366	US\$104,275
<b>Benchmark</b>	US\$103,000	US\$102,461 <sup>2</sup>	US\$105,535
<b>Performance Fee (20% of NAV outperformance over Benchmark)</b>	US\$388 As NAV > Benchmark, 20% x (US\$104,940 - US\$103,000)	US\$0 Benchmark > NAV	US\$0 Benchmark > NAV
<b>Total Fees Paid</b>	US\$1,448	US\$1,004	US\$1,053
<b>Final Net Asset Value of Class Shares at year end</b>	US\$104,552	US\$99,366	US\$104,275

<sup>1</sup> Investors should note that these scenarios are purely intended to be illustrative of the impact of different investment performance and have been simplified in some non-material respects to aid this understanding. For example, management fees and other expenses are in reality accrued on a daily basis but their calculation is presented in a simplified manner here for ease of review.

<sup>2</sup> Where a Performance Fee is paid in respect of a Calculation Period, the Benchmark is reset at the beginning of the next Calculation Period.

**Scenario 3**

	Period One	Period Two	Period Three
	8% growth	0% growth	-1% growth
<b>Gross Value of Class Shares at year end</b>	US\$108,000	US\$106,336	US\$104,220
<b>Management Fee 0.80%</b>	US\$864	US\$851	US\$834
<b>Other expenses 0.20%</b>	US\$216	US\$213	US\$208
<b>Initial Net Asset Value of Class Shares at year end</b>	US\$106,920	US\$105,273	US\$103,178
<b>Benchmark</b>	US\$104,000	US\$106,336 <sup>2</sup>	US\$101,019
<b>Performance Fee (20% of NAV outperformance over Benchmark)</b>	US\$584 As NAV > Benchmark, 20% x (US\$106,920 - US\$104,000)	US\$0 Benchmark > NAV	US\$432 As NAV > Benchmark, 20% x (US\$103,178 - US\$101,019)
<b>Total Fees Paid</b>	US\$1,664	US\$1,063	US\$1,474
<b>Final Net Asset Value of Class Shares at year end</b>	US\$106,336	US\$105,273	US\$102,746

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus.

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.70%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

**Contingent deferred sales charges**

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C2</b>	1%	0%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## QUANTITATIVE AND MULTI ASSET SUPPLEMENT

**6 DECEMBER 2023**

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-fund which is a separate portfolio of the Company

**NEUBERGER BERMAN GLOBAL SUSTAINABLE VALUE FUND**

(the “Portfolio”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to the Portfolio, this Supplement shall prevail. Each SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the Portfolio in accordance with SFDR. Each SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of an SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR for the Portfolio, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>CCDC</b>	China Central Depository & Clearing Co., Ltd;
<b>CFETS</b>	China Foreign Exchange Trade System & National Interbank Funding Centre;
<b>CIBM</b>	China Interbank Bond Market;
<b>CMU</b>	Central Moneymarkets Unit;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month for the Portfolio;
<b>Dealing Deadline</b>	3.00 pm (Irish time) on the relevant Dealing Day in respect of each Portfolio. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day for the Portfolio;
<b>HKMA</b>	Hong Kong Monetary Authority;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of the Portfolio;
<b>PBoC</b>	People's Bank of China;
<b>Portfolio</b>	the Neuberger Berman Global Sustainable Value Fund;
<b>SFDR Annex</b>	the annex hereof setting out the pre-contractual disclosures template with respect to the Portfolio, prepared in accordance with the requirements of Article 8 of SFDR; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC, Neuberger Berman Canada ULC, and such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolio carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of the information specific to the Portfolio, as included in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

## Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Distributing Classes shall be declared on an annual basis and paid within 30 Business Days thereafter in relation to the Net Income of the Distributing Classes for the calendar year ended the previous 31 December.

## Subscriptions and Redemptions

Subscriptions for Shares in all available Classes of the Portfolio, which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on the Business Day following the date of this Supplement to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Global Sustainable Value Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing in financial derivative instruments as described below. The Portfolio will not use FDI extensively or primarily for investment purposes.**

**Investment Objective** The Portfolio seeks to achieve long term capital growth from investing primarily in a portfolio of global equity holdings that comply with the Sustainable Criteria (as this term is defined within the “*Sustainable Investment Criteria*” section of the Prospectus).

**Investment Approach** The Manager delegates the management of the Portfolio to Neuberger Berman Canada ULC who in turn sub-delegates an allocation of those assets to Neuberger Berman Investment Advisers LLC. The Sub-Investment Manager will employ the investment strategy as outlined below. Neuberger Berman Europe Limited is appointed to manage any portion of the Portfolio’s assets that is not allocated to Neuberger Berman Canada ULC or any other sub-investment manager which is appointed to the Portfolio.

The Portfolio will seek to achieve its objective by investing primarily in equity securities issued by companies that are listed or traded on Recognised Markets globally (which include both developed and Emerging Market Countries). The Sub-Investment Manager may select from an investable universe which consists of equity securities issued by companies domiciled in countries which are represented in the Benchmarks (the “**Investable Universe**”).

The Portfolio seeks to reduce risk by diversifying among many industries within the countries and economic sectors it identifies. Although it has the flexibility to invest a significant portion of its assets in any one country or region, it generally intends to remain diversified across countries and geographical regions.

The Portfolio may invest in excess of 20% of its Net Asset Value in equity securities issued by companies domiciled in Emerging Market Countries.

The investment process seeks to achieve value style exposure by identifying assets that the Sub-Investment Manager believes are priced below their fair value (i.e. are undervalued). They seek to achieve this in six phases:

- (i) identify bottom-up investment themes which are believed to be persistent drivers of excess return (i.e. characteristics of stocks that the Sub-Investment Manager believes are systematically linked to the generation of better than average returns) (“return factors”). Return factors are used to assess the characteristics of security issuers and to drive individual stock selection. They include but are not limited to valuation, quality, income and technical price dynamics, such as momentum and low risk. The Sub-Investment Manager’s low-risk assessment includes signals such as volatility;
- (ii) determine the exposure of every equity in the Investable Universe to each return factor using the Sub-Investment Manager’s analysis as outlined at (i) above;
- (iii) rate each such equity, based on its aggregate exposure to each of the return factors, as determined at step (ii) above;
- (iv) evaluate risk in respect of net sector exposure, net country exposure and single name exposure limits, relative to the wider Investable Universe, as relevant. Country and economic sector allocations will be based on the security selection process described above, subject to the aforementioned risk monitoring considerations.
- (v) reduce exposure to equities that are poorly rated in comparison to the other equities in the Investable Universe or that are considered to carry higher risk relative to the other equities in the Investable Universe; and

- (vi) increase exposure to equities that are comparatively highly rated or that are considered to carry relatively lower risk, respectively, relative to the other equities in the Investable Universe.

The return factors outlined above will be selected based on their being generally (i) backed by sound economic and fundamental rationale, (ii) persistent over time, (iii) diversified relative to more traditional sources of returns, and (iv) capable of being implemented in a cost efficient way.

The Portfolio is reassessed on a regular basis to incorporate new information as it arises, at least monthly and more frequently if market conditions require. The Portfolio's investments are monitored daily and individual stocks can be sold at the discretion of the Sub-Investment Manager, due to significant changes in business, environment or company events. New purchases are derived from the reassessment of the investment universe, using the investment processes described above.

The Portfolio may invest in securities which provide exposure to the Investable Universe, where they meet, at a minimum, the Sustainability Criteria, as this term is defined within the "Sustainable Investment Criteria" section of the Prospectus. A list of securities which do not fulfil the Sustainability Criteria is provided to the Sub-Investment Manager by the Manager. The Sub-Investment Manager considers ESG risks and opportunities (as described in the "ESG" section and SFDR Annex below), among other risk and return factors described above, in the evaluation of securities for the purposes of holding and weighting securities in the Portfolio.

The Sub-Investment Manager will then assess the investment universe, which involves in-depth research and analysis of companies' ESG profiles and will also exclude companies that show poorly on this ESG assessment. Through these ESG exclusionary steps, the Sub-Investment Manager will exclude at least 20% of components of the investment universe and will ensure that securities representing at least 90% of the Net Asset Value of the Portfolio are covered by the ESG assessment.

Collective investment schemes may be used to take certain regional exposures which would be inefficient to obtain via individual securities or for cash management purposes. Some constituents of these collective investment schemes may not comply with the Sustainable Criteria.

Exposure will be obtained through direct investments and/or through investment in collective investment schemes and/or FDI as described below.

The Portfolio is actively managed and does not intend to track the Benchmarks which are included here for performance comparison purposes and because the Portfolio's investment policy restricts the extent to which the Portfolio's holdings may deviate from the Benchmarks, as described above. This deviation may be significant.

---

## Benchmarks

The MSCI ACWI (All Country World Index) Value (Total Return, Net of Tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to represent performance of large- and mid-cap stocks exhibiting overall value style characteristics across 23 developed and 24 emerging markets as defined by MSCI. The value investment style characteristics for this index are defined using three variables: book value to price, 12-month forward earnings to price and dividend yield. As of February 2023, the index covered more than 1,700 constituents across 11 sectors.

The MSCI ACWI (All Country World Index) (Total Return, Net of Tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed and emerging markets. As of February 2023, the index covered more than 2,800 constituents across 11 sectors, across 23 developed markets and 24 emerging markets.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of these indices which is denominated in the relevant Class currency.

---

## Base Currency

US Dollars (USD).

---

---

**Instruments / Asset Classes** The Portfolio will invest primarily in equity securities issued by issuers in any industrial sector globally. The Portfolio can invest in or be exposed to the following types of assets.

**Equity and Equity-linked Securities.** These securities may include common and preferred stocks, rights and warrants to purchase common stock, depositary receipts, and UCITS eligible partnership interests, which are listed or traded on Recognised Markets globally. Partnership interests are effectively equivalent to shares but are issued by an issuer established as a limited partnership instead of as a company.

**ETFs.** ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index, in this case global markets with a focus on equities. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be non-UCITS which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. The REITs which the Portfolio will invest in may be based globally but will give exposure to underlying properties located in Emerging Market Countries. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's investments in equity securities, as described above, provided that the Portfolio may not invest in other collective investment schemes (including ETFs) which themselves invest more than 10% of its Net Asset Value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and/or the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions or the United States of America and will qualify as UCITS or non-UCITS schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute VaR exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative VaR exceeds twice the VaR of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment schemes measure their global exposure.

**Financial Derivative Instruments ("FDIs").** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, the Portfolio may use FDI for hedging, efficient portfolio management and/or investment purposes and subject to the conditions and limits imposed by the Central Bank as set out in this Supplement:

- Forward currency contracts may be used to achieve a profit as well as to hedge existing long currency exposures; and
- Warrants (including equity warrants and rights (including equity rights) may be used for investment and efficient portfolio management purposes, including to hedge or to achieve exposure to a particular security.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Sub-Investment Manager may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to

---

achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return.

The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

**Repo Contracts.** Repo Contracts may also be used subject to the conditions and limits set out in the Prospectus.

---

#### Investment Restrictions

The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the "Investment Restrictions" section of the Prospectus and the UCITS Regulations.

The Portfolio will not utilise total return swaps, securities lending or margin lending.

---

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the "Investment Risks" section of the Prospectus. Investors should read and consider the entire "Investment Risks" section of the Prospectus. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.
- The Sub-Investment Manager may use forward currency contracts in order to hedge currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

---

#### Environmental, Social and Governance ("ESG")

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager assess securities in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

The Sub-Investment Manager applies (i) the Controversial Weapons Policy, (ii) the Sustainable Exclusion Policy, (iii) the Thermal Coal Involvement Policy and (iv) the Global Standards Policy, when determining what investments to make for the Portfolio. Further details on these screening/exclusion policies are set out in the "Sustainable Investment Criteria" section of the Prospectus.

The Sub-Investment Manager:

- (i) excludes securities issued by companies that are involved in controversial activities and behaviour and those which rated worst in terms of its ESG assessment from the investment universe, such that at least 20% of the investment universe is excluded on these bases; and
- (ii) ensures at least 90% ESG coverage rate of the Net Asset Value of the Portfolio.

In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager

---

intends to reduce the Portfolio's carbon footprint across scope 1, 2, and material scope 3 greenhouse gas ("GHG") emissions<sup>1</sup>, equating to a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Further details on Neuberger Berman's commitment to the Net Zero Asset Manager Initiative are contained in the "Sustainable Investment Criteria" section of the Prospectus.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

**Typical Investor Profile** The Portfolio may be suitable for an investor seeking long term capital appreciation over a mid-to-long term horizon. The investor should be prepared to accept periods of market volatility and the risks of the stock market in pursuit of long term goals, given the ability of the Portfolio to invest in securities of issued by Emerging Market Countries.

### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	0.90%	0.00%
B, C2, E	0.00%	0.90%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	0.59%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.45%	0.00%

C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

### FDR Annex

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**1. NEUBERGER BERMAN GLOBAL SUSTAINABLE VALUE FUND**

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman Global Sustainable Value Fund (the “Portfolio”)  
**Legal entity identifier:** 549300VLTCS1K4EA7H66

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<p><input checked="" type="radio"/> <input type="radio"/> <b>Yes</b></p> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective: ___%</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective: ___%</b></p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b></p> <p><input checked="" type="checkbox"/> It promotes <b>Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, <b>it will have a minimum proportion of 50% of sustainable investments</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <p><input type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager promotes a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are derived and considered using a blend of environmental and social characteristics derived from a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”) and a themes based ESG rating system (“**NB ESG Themes**”), (together the “**Composite ESG Rating**”).

The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics. Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The NB ESG Themes rating system is built around the concept of sector specific ESG themes (provided by third party data vendors), which are custom weighted and produce an overall NB ESG Themes rating for companies. Sector specific NB ESG Themes may include individual key ESG issues/ characteristics or aggregated key ESG issues/ characteristics which in turn form an ESG theme. The relevant environmental and social characteristics are listed below and will sit within overarching ESG themes. Examples of ESG themes may include climate change, pollution & waste or social opportunities.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the Composite ESG Rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager will promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions.<sup>1</sup>

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the Composite ESG Rating and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix and third party data will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured. Accordingly, the environmental and social characteristics considered as part of the Composite ESG Rating are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the Composite ESG Rating change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The Composite ESG Rating:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Themes rating system (as explained above) is built around the concept of sector specific ESG themes which are custom weighted and produces an overall ESG themes rating for companies.

The NB ESG Themes focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector’s theme-based characteristics are constructed using third party data analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise to apply a custom weighting to sector themes.

Companies with a favourable and/or an improving Composite ESG Rating have a higher chance of being included in the Portfolio. Companies with a poor Composite ESG Rating, especially where a poor Composite ESG Rating is not being addressed by a company,

<sup>1</sup> Scope 1 emissions are direct emissions from a company’s owned or controlled sources (such as emissions created directly by the company’s business processes or from vehicles owned by the company). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions are all other indirect emissions that occur in a company’s value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

are more likely to be removed from the investment universe or divested from the Portfolio.

## II. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards.

The Portfolio also applies the Neuberger Berman Sustainable Exclusion Policy. Further details on this ESG exclusion policy is set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the Composite ESG Rating; and (ii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

### ● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold 50% sustainable investments which will aim to promote the environmental & social characteristics listed above and will aim to contribute to the Portfolio's net zero goal, as detailed below.

Performance in relation to these environmental and social characteristics will be measured through the Composite ESG Rating. Both the sustainable and non-sustainable investments held by the Portfolio will apply the Composite ESG Rating, as detailed above.

Sustainable investments are more likely to have product/service revenue aligned with the United Nations' Sustainable Development Goals (“SDGs”).

Both the sustainable and non-sustainable investments held by the Portfolio will target net zero alignment by 2050, however the sustainable investments portion of the Portfolio would be expected to contribute to reducing the Portfolio's carbon footprint.

While the sustainable investments may have an environmental objective, the sustainable investments will not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

### ● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Sub-Investment Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the “How have the indicators for adverse impacts on sustainability factors been taken into account?” below) and violations of minimum safeguards (with respect to which see “How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?” below).

The Sub-Investment Manager also applies the ESG exclusion policies referenced above.

In addition, the Sub-Investment Manager will also look at companies' overall governance score to determine whether the company passes a good governance assessment.

The combination of all of these factors generates a quantitative validation for “sustainability” which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

The Sub-Investment Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the “PAIs”).

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view) in respect of the sustainable investments of the Portfolio and may evolve with improving data quality and availability.

The Sub-Investment Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fall below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the NB ESG exclusion policies detailed above, which includes consideration of several of the PAIs.

— — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – this Portfolio does not commit to holding Taxonomy-aligned investments.

## Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

Yes. The Sub-Investment Manager will consider PAIs with respect to the Portfolio in two ways:

1. All PAIs are considered when determining whether sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective as explained in *“How have the indicators for adverse impacts on sustainability factors been taken into account?”* above.
2. The Sub-Investment Manager will consider the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promote environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the **“Product Level PAIs”**).

See *“How have the indicators for adverse impacts on sustainability factors been taken into account?”* above for more details on how the Product Level PAIs are considered with respect to sustainable investments.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs it considers under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The Portfolio seeks to achieve long term capital growth from investing primarily in a portfolio of global equity holdings that comply with the Sustainable Criteria (as this term is defined within the *“Sustainable Investment Criteria”* section of the Prospectus). The Portfolio will seek to achieve its objective by investing primarily in equity securities issued by companies that are listed or traded on Recognised Markets globally (which include both developed and Emerging Market Countries). The Sub-Investment Manager may select from an investable universe which consists of equity securities issued by companies domiciled in countries which are represented in the Benchmarks (the **“Investable Universe”**).

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager intends to reduce the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions, equating to a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Further details on NB's commitment to the Net Zero Asset Managers Initiative are contained in the *“Sustainable Investment Criteria”* section of the Prospectus.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

utilises the Composite ESG Rating criteria as part of the Portfolio construction and investment management process.

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Themes focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector's theme-based characteristics are constructed using third party data analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise to apply a custom weighting to sector themes.

Companies with a favourable and/or an improving Composite ESG Rating have a higher chance of being included in the Portfolio. Companies with a poor Composite ESG Rating, especially where a poor Composite ESG Rating is not being addressed by a company, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance is also considered such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The Composite ESG Rating is generated for company holdings in the Portfolio.

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Themes are built around the concept of sector specific ESG themes which are custom weighted, and produces an overall ESG themes rating for companies by assessing them against thematic metrics derived using third party data.

Companies with a favourable and/or an improving Composite ESG Rating have a higher chance of being included in the Portfolio. Companies with a poor Composite ESG Rating, especially where a poor Composite ESG Rating is not being addressed by a company, are more likely to be removed from the investment universe or divested from the Portfolio.

II. Engagement:

The Sub-Investment Manager leverages NB internally led engagement with management teams of companies, this is achieved through a robust ESG engagement program which takes place at an NB entity level rather than at a Portfolio level. The Sub-Investment Manager views this internally led engagement with companies, as an important part of its investment process.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the internal engagement process, the Sub-Investment Manager may set objectives for the companies to attain.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a

company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

III. ESG exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-Investment Manager will reduce the investment universe by 20% through the application of ESG exclusions, as detailed above, and ESG analysis.

● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager uses to evaluate investments may include: corporate governance (accounting practices, ownership control, etc.) and corporate behaviour (tax transparency, business ethics, etc.).

The Sub-Investment Manager leverages internal engagements with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding a minimum of 50% sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

Asset allocation describes the share of investments in specific assets.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of environmentally and/or socially aligned investments in the Portfolio by reference to the proportion of companies in the Portfolio: i) that hold a Composite ESG Rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy Regulation are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager is not committing that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. As such, the minimum proportion of the Portfolio's investments that contribute to environmentally sustainable economic activities for the purposes of the EU Taxonomy will be 0%. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>2</sup>**

Yes:

In fossil gas

In nuclear energy

No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds<sup>\*</sup>, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

While the Portfolio may invest in sustainable investments with an environmental objective, such sustainable investments may not be in Taxonomy-aligned investments as they may not satisfy the criteria for same.

**What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

- **How does the designated index differ from a relevant broad market index?**

N/A

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## REAL ESTATE SECURITIES SUPPLEMENT

### 6 DECEMBER 2023

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-funds, each of which is a separate portfolio of the Company:

**NEUBERGER BERMAN US REAL ESTATE SECURITIES FUND**

**NEUBERGER BERMAN GLOBAL REAL ESTATE SECURITIES FUND**

(the “Portfolios”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to the Portfolios, this Supplement shall prevail. Each SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the relevant Portfolio in accordance with SFDR. Each SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of an SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR for a Portfolio, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	with respect to the Neuberger Berman Global Real Estate Securities Fund, a day (except Saturday or Sunday) on which the relevant financial markets in London, New York and Hong Kong are open for business provided that, if on any such day, the period during which banks in Hong Kong are open for normal trading is reduced as a result of a tropical cyclone warning signal (number 8 or higher), a black rainstorm warning signal or other similar event, such day shall not be a Business Day unless the Directors otherwise determine; and  with respect to the Neuberger Berman US Real Estate Securities Fund, a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>ChinaClear</b>	China Securities Depository and Clearing Corporation Limited;
<b>CSRC</b>	the China Securities Regulatory Commission of the PRC, the government agency responsible for matters relating to securities regulation;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in each Portfolio;
<b>Dealing Deadline</b>	3.00 pm (Irish time) on the relevant Dealing Day in respect of each Portfolio. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day;
<b>HKSCC</b>	Hong Kong Securities Clearing Company Limited;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of a Portfolio;
<b>Portfolios</b>	the Neuberger Berman US Real Estate Securities Fund and the Neuberger Berman Global Real Estate Securities Fund;
<b>SFDR Annex</b>	each annex hereof setting out the pre-contractual disclosures template with respect to a Portfolio, prepared in accordance with the requirements of Article 8 of SFDR;
<b>Shanghai Stock Connect</b>	the Shanghai-Hong Kong Stock Connect program;
<b>Shenzhen Stock Connect</b>	the Shenzhen-Hong Kong Stock Connect program;
<b>Stock Connect</b>	either or both of the Shanghai Stock Connect and the Shenzhen Stock Connect;
<b>SEHK</b>	the Stock Exchange of Hong Kong;
<b>SSE</b>	the Shanghai Stock Exchange;
<b>SZSE</b>	the Shenzhen Stock Exchange; and

**Sub-Investment Manager**

in relation to the Neuberger Berman US Real Estate Securities Fund, Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC, or such other company as may be appointed by the Manager from time to time in respect of a Portfolio, with the prior approval of the Company and the Central Bank.

in relation to the Neuberger Berman Global Real Estate Securities Fund, Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC, Neuberger Berman Asia Limited, or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

**Investment Risks**

Investment in the Portfolios carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of the information specific to each Portfolio, as included in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolios will achieve their respective objectives. While there are some risks described below that may be common to a number or all of the Portfolios, there may also be specific risk considerations which apply only to particular Portfolios.

## Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolios shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter; and

- each of the other Distributing Classes in the Portfolios shall be declared on a quarterly basis and will be paid within 30 Business Days.

## Subscriptions and Redemptions

Subscriptions for Shares in all Classes in each Portfolio which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched, from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolios will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman US Real Estate Securities Fund

**The Portfolio will not use FDI extensively or primarily for investment purposes.**

<b>Investment Objective</b>	Seek total return through investment in real estate securities, emphasising both capital appreciation and current income.
<b>Investment Approach</b>	<p>The Portfolio seeks to achieve its investment objective by investing in a concentrated portfolio principally in securities (including convertible bonds) issued by real estate investment trusts ("REITs"). It should be noted that the Portfolio will not acquire any real estate directly.</p> <p>REITs are listed and traded regularly on major stock markets in the US, including the New York Stock Exchange. REITs are companies or trusts that pool investor money and invest mainly in income producing real estate. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property, for example, office and industrial properties, shopping centres etc.</p> <p>The Portfolio may at times emphasise particular sub-sectors of the real estate business (for example, apartments, regional malls, offices, infrastructure, industrial, and health care).</p> <p>The Sub-Investment Manager seeks to select securities through a fundamental analysis of each REIT, using proprietary analytical tools. The Sub-Investment Manager reviews each REIT's current financial condition and industry position, as well as economic and market conditions. In doing so, they evaluate the REIT's growth potential, earnings estimates and quality of management, as well as other factors.</p> <p>The Sub-Investment Manager typically seeks to make long-term investments, however it may sell securities regardless of how long they have been held for, if the Sub-Investment Manager finds an opportunity which it believes is more compelling; if the Sub-Investment Manager's outlook on a REIT or the market changes; if a stock reaches a target price; if a REIT's business fails to perform as expected; or when other opportunities appear more attractive to the Sub-Investment Manager.</p> <p>The Portfolio may invest in companies of any market capitalisation but shall typically invest in REITs that have market capitalisation greater than USD \$300m at the time of purchase.</p> <p>The Portfolio will invest at least 80% of its Net Asset Value in REITs and other REIT-like entities at all times. "REIT-like entities" are those with similar characteristics to REITs but which generally do not pay dividends to investors and therefore are not eligible to be classified as REITs for US taxation purposes. The remaining 20% of the Portfolio's Net Asset Value may be invested in debt securities.</p> <p>Some of the REITs and other real estate securities in which the Fund invests may be preferred stock, which receives preference in the payment of dividends.</p> <p>The Portfolio may invest up to 15% of its Net Asset Value in REITS and debt securities which are deemed to be illiquid. Illiquid securities are securities that cannot be expected to be sold within seven (7) days in the ordinary course of business for approximately the amount at which the Portfolio has valued the securities. These may include unlisted or other restricted securities, namely privately placed securities which qualify under Rule 144A of the Securities Exchange Commission rules or Regulation S Securities, which at all times will be in accordance with the requirements of the Central Bank.</p> <p>The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. The Portfolio gives some consideration to the Benchmark constituents in the selection of securities and may not hold all or many of the Benchmark's components.</p>
<b>Benchmark</b>	<p>The FTSE NAREIT All Equity REITs Index (Total Return, Net of tax, USD) which is an index of publicly traded REITs that own commercial property.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>

<b>Base Currency</b>	US Dollars (USD).
<b>Instruments / Asset Classes</b>	<p>The Portfolio will primarily invest in REITs. The Portfolio can invest in or be exposed to the following types of assets.</p> <p><b>Real Estate Investment Trusts (“REITs”).</b> REITs are companies or trusts that pool investor money and invest mainly in income producing real estate. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales. The REITs which the Portfolio will invest in are as follows:</p> <ul style="list-style-type: none"> <li>• Equity REITs, which invest the majority of their assets directly in real property and derive their income from rents, and capital gains from appreciation realised through property sales;</li> <li>• Mortgage REITs, which invest the majority of their assets in real estate mortgages and derive their income mainly from interest payments; and</li> <li>• Hybrid REITs, which combine the characteristics of both equity and mortgage REITs.</li> </ul> <p><b>Equity and Equity-linked Securities.</b> These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock and American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution. Many of these securities may be issued by other real estate companies, which invest the majority of their assets directly in real property and derive their income from rents, and capital gains from appreciation realised through property sales. Common stocks issued by other real estate companies have similar characteristics to REITs but are not required to pay dividends to investors and therefore are not eligible to be classified as REITs for US and international taxation purposes.</p> <p><b>Fixed Income Securities (Debt securities).</b> These securities may include both fixed and floating rate debt securities, including bonds and debentures issued by US private and government issuers (including any political subdivisions, agencies or instrumentalities of the US Government). Debt securities can be fixed or floating rate and either investment grade or below investment grade, provided that, at the time of purchase, they are rated at least B by a Recognised Rating Agency or, if unrated by any of these, deemed by the Sub-Investment Manager to be of comparable quality.</p> <p>Investment grade securities are securities which are rated in one of the four highest rating categories by a Recognised Rating Agency (without regard to incremental gradations) or determined to be of similar creditworthiness by the Sub-Investment Manager. The Portfolio may continue to hold such securities that are downgraded to below investment grade after purchase. In addition, where the Sub-Investment Manager perceives there to be added value, the Portfolio may invest in securities which are rated below investment grade or are unrated.</p> <p><b>Money Market Instruments.</b> These securities may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.</p> <p><b>Repo Contracts.</b> Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.</p>
<b>Investment Restrictions</b>	<ul style="list-style-type: none"> <li>• The Portfolio can invest up to a total of 10% of assets in mortgage REITs and hybrid REITs.</li> <li>• No more than 20% of the Portfolio can be invested in securities rated below investment grade by Recognised Rating Agencies or in securities, which subsequent to their purchase, are downgraded to below investment grade.</li> <li>• The Portfolio may invest a proportion of its assets in REITs and debt securities which are not listed or traded on Recognised Markets, subject to the limits contained in UCITS Regulations and set out in the Prospectus.</li> </ul>

- The Portfolio may invest up to 10% of its net assets in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

---

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the “*REITS*” risk, which is contained within the “*Market Risks*” section, is particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio’s Net Asset Value, as measured using the Commitment Approach, at any time.
- When the Sub-Investment Manager anticipates adverse market, economic, political or other conditions, it may temporarily depart from the Portfolio’s investment objective and invest substantially in high-quality, short-term investments.
- Illiquid securities may be difficult for the Portfolio to value or dispose of due to the absence of an active trading market, and consequently may have an adverse impact on the investment performance of the Portfolio.
- Investors should refer to the “*Investment Risks*” section of the Prospectus for further information on the characteristics of REITs.
- The Sub-Investment Manager will use forward currency contracts in order to hedge currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.

---

#### Environmental, Social and Governance (“ESG”)

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are systematically considered in the selection of securities to be constituents of the Portfolio as part of an ESG integration process. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights) and regard will be had to risks and opportunities which may arise from these factors. Governance issues that may create risks can include a low proportion of independent directors or staggered elections to the board of directors of a REIT, external management structures and business relationships with other entities owned by the management of a REIT, while opportunities may be created by compensation policies that link senior management compensation to long term investor returns and proxy access for investor proposals. Environmental issues that create risks can include risks to REITs caused by climate change and reputational risks associated with REITs which display poor environmental policies, while opportunities may be created by energy management, reducing greenhouse gas emissions and waste management. Social issues that may create risks can include the physical safety of tenants of a REIT from natural disasters and fires and the introduction of local regulation of rental rates and evictions within the residential real estate sectors, while opportunities may be created when a REIT effectively partners with and supports local communities or demonstrates strong employee retention or a diverse management team or board. The Sub-Investment Manager assesses securities in relation to their exposure to and the management of ESG risks and opportunities.

As part of this analysis, the Sub-Investment Manager utilises a broad range of sources combining company-reported and third-party research to manage the ESG performance of the Portfolio. In conjunction with its research department and ESG team, the Sub-Investment Manager assigns ESG ratings to each issuer in the investable universe of the Portfolio using the NB ESG Quotient. The ESG scores are integrated into its valuation model and influence the rankings of the issuers and thereby the securities included in the investment portfolio of the Portfolio. The Sub-Investment Manager also maintains a consistent engagement with

---

issuers in the investment portfolio to assist management teams in improving their ESG practices and reporting of material ESG factors.

The Sub-Investment Manager excludes the purchase of companies that own, operate or primarily provide integral services to private prisons, given the significant social controversy and reputational risks associated with these, and also because the dependency on Justice Department policies and facilities or local governments' policies regarding their operations and the fact that these facilities are not easily reconfigurable for alternative uses.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors seeking capital appreciation over the long-term with current income, through investing on a diversified basis primarily in securities (including convertible bonds) issued by US real estate investment trusts and should be prepared to accept a higher level of such volatility.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.50%	0.00%
B, C1, C2, E	0.00%	1.80%	1.00%
C	0.00%	1.00%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.75%	0.00%
M	2.00%	1.50%	1.00%
P	5.00%	0.71%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.10%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
B	4%	3%	2%	1%	0%
C, C1	1%	0%	0%	0%	0%
C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

Notwithstanding the information set out under the “Classes” section within “Annex II – Share Class Information” to the Prospectus, please note that, subject to any transitional period or other arrangement agreed with Shareholders in the relevant Classes, Shares in the Category B, C2 and E Classes will automatically convert into Shares in the corresponding T Class, at no additional cost to holders of such Shares, upon the expiry of four years (Category B Classes), two years (Category C2 Classes) and three years (Category E Classes) from the date of the initial subscription into the relevant B, C2 or E Class.

#### Other important information for investors in Hong Kong

As the Portfolio has been authorised for public offer in Hong Kong, the Hong Kong Securities and Futures Commission (“HKSF”) requires the Company to classify the Portfolio on the basis of its expected maximum net derivative exposure (“NDE”). The HKSF requires the NDE to be calculated in accordance with the HKSF’s Code on Unit Trusts and

Mutual Funds and the requirements and guidance issued by the HKSF, which may be updated from time to time. This requires the Company to convert all FDI acquired for investment purposes that would generate incremental leverage at the portfolio level of the Portfolio into their equivalent positions in the underlying assets. Applying these requirements, the Portfolio's NDE is expected to be less than 50% but the actual level may be higher than the expected level in exceptional circumstances, for example when there are sudden movements in markets and/or investment prices.

For the avoidance of doubt, complying with the HKSF's requirements to classify the Portfolio on the basis of its NDE does not amend the investment objectives or policies or otherwise impact the management of the Portfolio or its use of FDI, as the requirements are solely to measure the Portfolio's expected use of FDI, as described above, using the HKSF's methodology and disclose the results.

## Neuberger Berman Global Real Estate Securities Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. The Portfolio will not use FDI extensively or primarily for investment purposes.**

<b>Investment Objective</b>	<p>The Portfolio seeks total return through investment in securities of real estate companies located globally, emphasizing both capital appreciation and current income.</p>
<b>Investment Approach</b>	<p>The Portfolio seeks to achieve its investment objective by investing at least 80% of its net assets in US and non-US equity securities issued by real estate investment trusts ("REITs") and common stocks and other securities issued by other real estate companies. A REIT is an entity dedicated to owning, and usually operating, income-producing real estate, or to financing real estate. The Portfolio defines a real estate entity as one that derives at least 50% of its revenue from, or has at least 50% of its assets in, real estate. It should be noted that the Portfolio will not acquire any real estate directly.</p> <p>Under normal market conditions, the Portfolio will invest a minimum of 40% of its Net Asset Value in REITs and real estate companies organized or located outside the US or doing a substantial amount of business outside the US. Where the Sub-investment Manager deems market conditions unfavourable, the Portfolio will invest at least 30% of its Net Asset Value in REITs and real estate companies organized or located outside the United States or doing a substantial amount of business outside the United States. The Sub-investment Manager considers a company that derives at least 50% of its revenue from business outside the United States or has at least 50% of its assets outside the United States as doing a substantial amount of business outside the United States.</p> <p>The Portfolio will allocate its assets among various regions and countries, including the United States but will at all times invest in a minimum of three different countries.</p> <p>The Sub-Investment Manager seeks to select securities through a fundamental analysis of each company, using proprietary analytical tools. The Sub-Investment Manager reviews each company's current financial condition and industry position, as well as economic and market conditions. In doing so, they evaluate the company's growth potential, earnings estimates and quality of management, as well as other factors.</p> <p>The Sub-Investment Manager typically seeks to make long-term investments, however it may sell securities regardless of how long they have been held for, if the Sub-Investment Manager finds an opportunity which it believes is more compelling; if the Sub-Investment Manager's outlook on a REIT or the market changes; if a stock reaches a target price; if a REIT's business fails to perform as expected; or when other opportunities appear more attractive to the Sub-Investment Manager. The Portfolio may invest up to 20% of its Net Asset Value in real estate equity securities issued by companies domiciled in Emerging Market Countries.</p> <p>The Portfolio may invest up to 20% of its Net Asset Value in debt securities of real estate companies.</p> <p>The Portfolio may invest up to 15% of its assets in REITS and debt securities which are deemed to be illiquid. Illiquid securities are securities that cannot be expected to be sold within seven (7) days in the ordinary course of business for approximately the amount at which the Portfolio has valued the securities. These may include unlisted or other restricted securities, namely privately placed securities which qualify under Rule 144A of the Securities Exchange Commission rules or Regulation S Securities, which at all times will be in accordance with the requirements of the Central Bank</p> <p>Under normal market conditions, the Sub-Investment Manager anticipates that the Portfolio's:</p> <ul style="list-style-type: none"> <li>- Regional exposures will on average be between 50%-150% relative to the Benchmark's weighting; and</li> <li>- For countries with the Benchmark's weightings below 5%, weightings can be +/- 5% relative to the Benchmark's weighting. Property sector exposures will on average be between 50%-150% relative to the Benchmark's weighting.</li> </ul> <p>The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes and because the Portfolio's investment policy restricts the extent to which the Portfolio's holdings may deviate from the Benchmark, as described above. This deviation may be significant.</p>

<b>Benchmark</b>	<p>The FTSE EPRA/NAREIT Developed Real Estate Index (Total Return, Net of Tax, USD), which is an index designed to track the performance of listed real estate companies and REITS worldwide.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>
<b>Base Currency</b>	US Dollars (USD).
<b>Instruments / Asset Classes</b>	<p>The Portfolio will primarily invest in REITs. The Portfolio can invest in or be exposed to the following types of assets.</p> <p><b>Real Estate Investment Trusts ("REITs").</b> REITs are companies or trusts that pool investor money and invest mainly in income producing real estate. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales. The REITs which the Portfolio will invest in are as follows:</p> <ul style="list-style-type: none"> <li>• Equity REITs, which invest the majority of their assets directly in real property and derive their income from rents, and capital gains from appreciation realised through property sales;</li> <li>• Mortgage REITs, which invest the majority of their assets in real estate mortgages and derive their income mainly from interest payments; and</li> <li>• Hybrid REITs, which combine the characteristics of both equity and mortgage REITs.</li> </ul> <p><b>Equity and Equity-linked Securities.</b> These securities may include, without limitation, common stock, equity warrants and rights, preferred stock, convertible bonds, convertible preferred stock and American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution. Many of these securities may be issued by other real estate companies, which invest the majority of their assets directly in real property and derive their income from rents, and capital gains from appreciation realised through property sales. Common stocks issued by other real estate companies have similar characteristics to REITs but are not required to pay dividends to investors and therefore are not eligible to be classified as REITs for US and international taxation purposes.</p> <p><b>Fixed Income Securities (Debt securities).</b> These securities may include both fixed and floating rate debt securities, including bonds and debentures issued by US private and government issuers (including any political subdivisions, agencies or instrumentalities of the US Government). Debt securities can be fixed or floating rate and either investment grade or below investment grade, provided that, at the time of purchase, they are rated at least B by a Recognised Rating Agency or, if unrated by any of these, deemed by the Sub-Investment Manager to be of comparable quality.</p> <p>Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds". The Portfolio may continue to hold investment grade securities that are downgraded to below investment grade after purchase.</p> <p><b>Money Market Instruments.</b> These securities may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.</p> <p><b>Repo Contracts.</b> Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.</p>
<b>Stock Connect</b>	<p>The China Securities Regulatory Commission and the Securities and Futures Commission of Hong Kong have an approved program which establishes mutual stock markets access between the PRC and Hong Kong, namely Stock Connect. The Sub-Investment Manager</p>

may pursue the Portfolio's investment objective by investing up to 10% of the Portfolio's Net Asset Value directly in certain eligible China A Shares via Stock Connect.

The Shanghai Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SSE. The Shenzhen Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SZSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SZSE.

Each of the Shanghai Stock Connect and Shenzhen Stock Connect comprises a Northbound Trading Link and a Southbound Trading Link. Under the Northbound Trading Link, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions), through their Hong Kong brokers and a securities trading service company established by the SEHK, may trade Eligible Securities listed on the SSE and the SZSE by routing orders to the SSE and the SZSE respectively.

#### Eligible Securities

Among the different types of SSE-or SZSE-listed securities, only China A Shares and ETFs are currently permitted for Northbound trading under Stock Connect.

Currently, Hong Kong and overseas investors are able to trade certain SSE Securities. Eligible Securities under the Northbound Trading Link of the Shanghai Stock Connect include all the constituent stocks from time to time of the SSE 180 Index and SSE 380 Index, and all the SSE-listed China A Shares that are not included as constituent stocks of the relevant indices but which have corresponding China H Shares listed on the SEHK, except the following:

- SSE-listed shares which are not traded in CNY; and
- SSE-listed shares which are included in the "risk alert board".

Eligible Securities under the Northbound Trading Link of the Shenzhen Stock Connect include any constituent stock of the SZSE Component Index and the SZSE Small/Mid Cap Innovation Index which has a market capitalisation of CNY6 billion or above and all SZSE-listed shares of companies which have issued both China A Shares and China H Shares, except the following:

- SZSE-listed shares which are not traded in CNY; and
- SZSE-listed shares which are included in the "risk alert board" or under delisting arrangement.

In addition, Hong Kong and overseas investors are able to trade eligible SSE-listed and SZSE-listed ETFs that satisfy the relevant criteria at a regular review and are accepted as eligible ETFs for Northbound trading under Stock Connect. Regular reviews will be performed to determine the eligible ETFs for Northbound trading every six months.

It is expected that the list of Eligible Securities will be subject to review and may change from time to time.

If an Eligible Security ceases to be classified as such, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions) will only be allowed to sell holdings of such Eligible Security but will be restricted from buying any more of such Eligible Security.

#### Trading day

Investors (including the Portfolio, subject to its investment approach and restrictions) are only allowed to trade through Stock Connect on days on which both markets are open for trading, and banking services are available in both markets on the corresponding settlement days.

#### Trading quota

Trading under Stock Connect is subject to the Daily Quota. Northbound trading through each Stock Connect is subject to a separate set of Daily Quota. The Daily Quota limits the maximum net buy value of cross-boundary trades under each Stock Connect per day. The SEHK will monitor the quota and publish the remaining balance of the Northbound Daily Quota at scheduled times on the SEHK's website. The Daily Quota may change from time to time without prior notice and investors should refer to the SEHK's website and other information published by the SEHK for up-to-date information.

Settlement and custody

The HKSCC will be responsible for the clearing, settlement and the provision of depository, nominee and other related services of the trades executed by Hong Kong market participants and investors.

The Eligible Securities traded through Stock Connect are issued in scripless form, so investors do not hold any physical securities. Hong Kong and overseas investors who have acquired Eligible Securities through Northbound trading should maintain the Eligible Securities with their brokers' or custodians' stock accounts with CCASS, operated by HKSCC.

Corporate actions and shareholders' meetings

Notwithstanding the fact that the HKSCC does not claim proprietary interests in the Eligible Securities held in its omnibus stock account in ChinaClear, ChinaClear as the share registrar for the Eligible Securities will still treat HKSCC as one of the shareholders when it handles corporate actions in respect of such Eligible Securities.

HKSCC monitors the corporate actions affecting Eligible Securities and keeps the relevant brokers or custodians participating in CCASS ("CCASS participants") informed of all such corporate actions that require CCASS participants to take steps in order to participate in them.

SSE and SZSE-listed companies usually announce their annual general meeting / extraordinary general meeting information about one month before the meeting date. A poll is called on all resolutions for all votes. HKSCC will advise CCASS participants of all general meeting details such as meeting date, time, venue and the number of resolutions.

Foreign shareholding restrictions

The CSRC stipulates that, when holding China A Shares through Stock Connect, Hong Kong and overseas investors are subject to the following shareholding restrictions:

- Single foreign investors' shareholding by any Hong Kong or overseas investor in a China A Share must not exceed 10% of the total issued shares; and
- Aggregate foreign investors' shareholding by all Hong Kong and overseas investors in a China A Share must not exceed 30% of the total issue shares.

Should the shareholding of a single investor in a China A Share listed company exceed the above restriction, the investor would be required to unwind his position on the excessive shareholding according to a last-in-first-out basis within a specific period. The SSE, the SZSE and the SEHK will issue warnings or restrict the buy orders for the related China A Shares if the percentage of total shareholding is approaching the upper limit.

SSE and SZSE-listed ETFs are not subject to the aforementioned shareholding restrictions.

Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities, subject to its investment approach and restrictions.

Trading fees and taxes

In addition to paying trading fees and stamp duties in connection with trading of Eligible Securities, the Portfolio may be subject to other fees and taxes concerned with income arising from transfers of stocks or ETFs (if applicable) which are determined by the relevant authorities.

Further information about the Stock Connect is available online at the website:

[https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc\\_lang=en](https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc_lang=en)

**Investment Restrictions**

- The Portfolio can invest up to a total of 10% of Net Asset Value in mortgage REITs and hybrid REITs.
- The Portfolio may invest in China A Shares up to 10% of its Net Asset Value. The Portfolio may invest directly in the China A Share market through Stock Connect as described above and indirectly, mainly through investments in equity linked products issued by QFIs and through transferable securities which may be issued by entities which are managed by affiliates of the Sub-Investment Manager.
- The Portfolio will invest at least 80% of its Net Asset Value in REITs and common stocks

issued by other real estate companies at all times.

- Up to 20% of Net Asset Value may be invested in real estate equity securities issued by companies domiciled in Emerging Market Countries.
- Up to 20% of Net Asset Value may be invested in debt securities of real estate companies.
- No more than 20% of the Portfolio's Net Asset Value can be invested in securities rated below investment grade by Recognised Rating Agencies or in securities, which subsequent to their purchase, are downgraded to below investment grade.
- The Portfolio may invest a proportion of its assets in REITs, securities issued by REITs and debt securities which are not listed or traded on Recognised Markets, subject to the limits contained in UCITS Regulations and set out in the Prospectus.
- The Portfolio may invest up to 10% of its Net Asset Value in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

## Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the "*Investment Risks*" section of the Prospectus. While investors should read and consider the entire "*Investment Risks*" section of the Prospectus, the "*REITS*" risk, which is contained within the "*Market Risks*" section, is particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.
- When the Sub-Investment Manager anticipates extreme adverse market, economic, political or other conditions, it may temporarily depart from the Portfolio's investment objective and invest substantially in high-quality, short-term investments.
- Illiquid securities may be difficult for the Portfolio to value or dispose of due to the absence of an active trading market and consequently may have an adverse impact on the investment performance of the Portfolio.
- The Sub-Investment Manager may use forward currency contracts in order to hedge currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.

## Environmental, Social and Governance ("ESG")

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are systematically considered in the selection of securities to be constituents of the Portfolio as part of an ESG integration process. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights) and regard will be had to risks and opportunities which may arise from these factors. Governance issues that may create risks can include a low proportion of independent directors or staggered elections to the board of directors of a REIT, external management structures and business relationships with other entities owned by the management of a REIT, while opportunities may be created by compensation policies that link senior management compensation to long term investor returns and proxy access for investor proposals. Environmental issues that create risks can include risks to REITs caused by climate change and reputational risks associated with REITs which display poor environmental policies, while opportunities may be created by energy management, reducing greenhouse gas emissions and waste management. Social issues that may create risks can include the physical safety of tenants of a REIT from natural disasters and fires and the introduction of local regulation of rental rates and evictions within the residential real estate sectors, while opportunities may be

created when a REIT effectively partners with and supports local communities or demonstrates strong employee retention or a diverse management team or board. The Sub-Investment Manager assesses securities in relation to their exposure to and the management of ESG risks and opportunities.

As part of this analysis, the Sub-Investment Manager utilises a broad range of sources combining company-reported and third-party research to manage the ESG performance of the Portfolio. In conjunction with its research department and ESG team, the Sub-Investment Manager assigns ESG ratings to each issuer in the investable universe of the Portfolio using the ESG Quotient. The ESG scores are integrated into its valuation model and influence the rankings of the issuers and thereby the securities included in the investment portfolio of the Portfolio. The Sub-Investment Manager also maintains a consistent engagement with issuers in the investment portfolio to assist management teams in improving their ESG practices and reporting of material ESG factors.

The Sub-Investment Manager excludes the purchase of companies that own, operate or primarily provide integral services to private prisons, given the significant social controversy and reputational risks associated with these, and also because the dependency on Justice Department policies and facilities or local governments' policies regarding their operations and the fact that these facilities are not easily reconfigurable for alternative uses.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors seeking total return through investment in securities of real estate companies located globally, emphasising both capital appreciation and current income. Investors should be prepared to accept additional risks associated with investing in Emerging Market Countries.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.50%	0.00%
B, C2, E	0.00%	1.50%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	1.00%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.75%	0.00%
M	2.00%	1.50%	1.00%
P	5.00%	0.71%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.10%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the "Administration Fees" heading in the "Fees and Expenses" section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 - 1459	> 1459
B	4%	3%	2%	1%	0%

SFDR Annexes

1. **NEUBERGER BERMAN US REAL ESTATE SECURITIES FUND**
2. **NEUBERGER BERMAN GLOBAL REAL ESTATE SECURITIES FUND**

SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman US Real Estate Securities Fund (the “Portfolio”)

Legal entity identifier: 549300T9PUOV1AK0OR82

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

   **No**

<input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective: ___%</b>	<input type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul> <input checked="" type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b>
---	---

**What environmental and/or social characteristics are promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are promoted using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities with a favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will not invest in an issuer with a poor NB ESG Quotient rating unless there is a commitment to engage with the issuer with an expectation that the NB ESG Quotient rating will improve over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management and materials sourcing.
- **Social Characteristics:** access to healthcare; community relations; employee incentives & risk taking; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards and workforce diversity & inclusion.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, are more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy’s Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager’s constructive engagement efforts with issuers will depend on each of the issuer’s receptiveness and responsiveness to such engagement.

II. Climate Value-at-Risk:

Climate Value-at-Risk (“CVaR”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

related risks to address through issuer engagement. Due to data limitations, CVaR is not applied across all issuers held by the Portfolio and is instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Sub-Investment Manager excludes the purchase of companies that own, operate or primarily provide integral services to private prisons, given the significant social controversy and reputational risks associated with these, and also because the dependency on Justice Department policies and facilities or local governments' policies regarding their operations and the fact that these facilities are not easily reconfigurable for alternative uses. Further details on these ESG exclusion policies are set out in the "Sustainable Investment Criteria" section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

— — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio does not commit to holding Taxonomy aligned investments.

#### Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs. The Sub-Investment Manager will keep the list of Product Level PAIs considered under active review.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The Portfolio seeks total return through investment in real estate securities, emphasising both capital appreciation and current income. The Portfolio seeks to achieve its investment objective by investing in a concentrated portfolio principally in securities (including convertible bonds) issued by real estate investment trusts ("REITs"). It should be noted that the Portfolio will not acquire any real estate directly.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

### ● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

#### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuer holdings in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall issuer view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

#### II. Engagement:

The Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process (including the investment selection process). Issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuer's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately.

The Sub-Investment Manager firmly believes this consistent engagement with issuers can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of issuer unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for issuers in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

● ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of issuers. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at an issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

### ● How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Portfolio does not use derivatives extensively or primarily for investment purposes and it will not use derivatives to promote environmental or social characteristics.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

## To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

### ● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

### ● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A

**What is the minimum share of socially sustainable investments?**

N/A

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A - The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

● ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

N/A

● ***How does the designated index differ from a relevant broad market index?***

N/A

● ***Where can the methodology used for the calculation of the designated index be found?***

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman Global Real Estate Securities Fund (the “Portfolio”)

--	--

**What environmental and/or social characteristics are promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are promoted using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and issuers relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities with a favourable and/or an improving NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will not invest in an issuer with a poor NB ESG Quotient rating unless there is a commitment to engage with the issuer with an expectation that the NB ESG Quotient rating will improve over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; toxic emissions & waste; water management and materials sourcing.
- **Social Characteristics:** access to healthcare; community relations; employee incentives & risk taking; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards and workforce diversity & inclusion.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient rating, especially where a poor NB ESG Quotient rating is not being addressed by an issuer, are more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how issuers can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through issuer engagement. Due to data limitations, CVaR is not applied across all issuers held by the Portfolio and is instead limited to the issuers for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Sub-Investment Manager prohibits purchases of issuers that own, operate or primarily provide integral services to private prisons, given the significant social controversy, reputational risks, dependency on Justice Department policies and facilities that are not easily reconfigurable for alternate uses. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

— — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

The Portfolio does not commit to holding Taxonomy aligned investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will keep the list of Product Level PAIs considered under active review.

The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager’s subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The Portfolio seeks total return through investment in securities of real estate companies located globally, emphasizing both capital appreciation and current income. The Portfolio seeks to achieve its investment objective by investing at least 80% of its net assets in US and non-US equity securities issued by real estate investment trusts (“**REITs**”) and common stocks and other securities issued by other real estate companies. A REIT is an entity dedicated to owning, and usually operating, income-producing real estate, or to financing real estate. The Portfolio defines a real estate entity as one that derives at least 50% of its revenue from, or has at least 50% of its assets in, real estate. It should be noted that the Portfolio will not acquire any real estate directly.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

In addition, fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for issuer holdings in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall issuer view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. Issuers with a poor NB ESG Quotient rating especially where these are not being addressed by that issuer, are more likely to be removed from the investment universe or divested from the Portfolio.

II. Engagement:

The Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process (including the investment selection process). Issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuer's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies, or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately.

The Sub-Investment Manager firmly believes this consistent engagement with issuers can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of issuer unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for issuers in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of issuers. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process.

- While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at an issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio .

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

- **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Portfolio does not use derivatives extensively or primarily for investment purposes and it will not use derivatives to promote environmental or social characteristics.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A

**What is the minimum share of socially sustainable investments?**

N/A

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A - The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

● **How does the designated index differ from a relevant broad market index?**

N/A

● **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	a day (except Saturday or Sunday) on which the relevant financial markets in Singapore, London and New York are open for business;
<b>CCDC</b>	China Central Depository & Clearing Co., Ltd;
<b>CFETS</b>	China Foreign Exchange Trade System & National Interbank Funding Centre;
<b>CIBM</b>	China Interbank Bond Market;
<b>CMU</b>	Central Moneymarkets Unit;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in the Portfolio;
<b>Dealing Deadline</b>	3.00 pm (Irish time) on the Business Day before the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the Business Day before the relevant Dealing Day;
<b>HKMA</b>	Hong Kong Monetary Authority;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine;
<b>Paris Agreement</b>	the Paris Agreement is a legally binding international treaty on climate change. Its goal is to limit global warming well below 2° Celsius, preferably 1.5° Celsius, compared to pre-industrial levels. To achieve this long-term temperature goal, countries aim to reach global peaking of greenhouse gas emissions as soon possible to achieve a climate neutral world by mid-century;
<b>PBoC</b>	People's Bank of China;
<b>Portfolio</b>	the Neuberger Berman Sustainable Asia High Yield Fund;
<b>SFDR Annex</b>	the annex hereof setting out the pre-contractual disclosures template with respect to the Portfolio, prepared in accordance with the requirements of Article 8 of SFDR;
<b>SHCH</b>	Shanghai Clearing House; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC, Neuberger Berman Singapore Pte. Limited, or such other company as may be appointed by the Manager from time to time in respect the Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolio carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolio will achieve its objective.

### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Distributing Classes in the Portfolio will be declared on a quarterly basis and paid within 30 Business Days thereafter;
- each of the (Monthly) Gross Income Distributing Classes in the Portfolio shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter; and
- each of the other Gross Income Distributing Classes in the Portfolio shall be declared on a quarterly basis and paid within thirty Business Days thereafter.

### Subscriptions and Redemptions

Subscriptions for Shares in all Classes which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

Except as provided below, the Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10  
BRL Classes: BRL 20  
CAD Classes: CAD 10  
CHF Classes: CHF 10  
CLP Classes: CLP 5,000  
CNY Classes: CNY 100

DKK Classes: DKK 50  
EUR Classes: EUR 10  
GBP Classes: GBP 10  
HKD Classes: HKD 10  
ILS Classes: ILS 30  
JPY Classes: JPY 1,000

NOK Classes: NOK 100  
NZD Classes: NZD 10  
SEK Classes: SEK 100  
SGD Classes: SGD 20  
USD Classes: USD 10  
ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched, from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolio will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Sustainable Asia High Yield Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors.**

### Investment Objective

The Portfolio aims to outperform the Benchmark (as specified in the “Benchmark” section below) before fees over a market cycle (typically 3 years) by primarily investing in below investment grade rated Hard Currency-denominated debt instruments issued in Asian countries that comply with the Sustainable Criteria.

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

### Investment Approach

The Portfolio will invest primarily in below investment grade rated Hard Currency-denominated debt securities and money market instruments which are issued by governments or government agencies of, or corporate issuers which have their head office or exercise an overriding part of their economic activity in, Asian countries and which are consistent with the Portfolio’s objective of promoting environmental and social characteristics. For the purposes of the Portfolio, Hard Currency is defined as US Dollar, Euro, Sterling, Japanese Yen and Swiss Franc. Investors should note that public issuers include corporate issuers that are, either directly or indirectly, 100% government-owned.

With the exception of permitted investments in transferable securities and money market instruments which are unlisted, all securities invested in by the Portfolio will be listed, dealt or traded on Recognised Markets globally, without any particular focus on any one industrial sector.

In determining the investments which the Portfolio will make, the Sub-Investment Manager will prioritise issuers which:

- have a lower carbon emission intensity. The Portfolio aims to achieve a carbon emission intensity level that is at least 30% lower than that of the broader Asia high yield debt investment universe, represented by the J.P. Morgan Asian Credit High Yield Index (the “**Index**”). The average carbon emission intensity will be measured and calculated based on the Portfolio’s carbon emission intensity struck at each of the four calendar quarter ends; and
- demonstrate better environmental, social and governance (“**ESG**”) practices. The Portfolio aims to achieve a higher ESG score as compared to the broader Asia high yield debt investment universe, represented by the Index, based on third party ESG scores from an established external provider.

The objective of lower carbon emission intensity is with a view to achieving the long-term global warming objectives of the Paris Agreement.

In addition, the Portfolio will make meaningful allocations to environmental, social and sustainability-labelled fixed income securities and, as a result, will have a higher exposure to such securities as compared to the Index, dependent on market opportunities.

The Portfolio will apply the NB Sustainable Exclusion Policy as detailed in the “*Sustainable Investment Criteria*” section of the Prospectus. In addition, the Portfolio will exclude issuers which are ranked in the bottom decile based on the NB ESG Quotient with no near-term improvement prospects, although the Portfolio may invest in such issuers, on an ancillary basis, where such issuers have near-term improvement prospects, which the Sub-Investment Manager will assess based on the NB ESG Quotient on an ongoing basis.

The Portfolio will not invest in debt securities and money market instruments issued by sovereign or 100% government-owned issuers which are identified by the Sub-Investment Manager as having weak ESG practices and such issuers will be excluded from the Portfolio. Such exclusions will be based on a number of ESG criteria including the following:

- Sovereign issuers which are ranked in the bottom decile based on the NB ESG Quotient, with no near term improvement prospects; or
- Sovereign issuers which are excluded from the J.P. Morgan ESG EMBI Global Diversified Index based on ESG considerations; or
- Sovereign issuers where top officials have been sanctioned by the UN Security Council

- based on human rights violations; or
- Sovereign issuers which are assessed as having high and increasing greenhouse gas intensity levels; or
- Sovereign issuers which are non-compliant with the standard put forth by the OECD's Global Forum on Transparency and Exchange of Information for Tax Purposes, or sovereign issuers that are classified as a high risk jurisdiction subject to a call for action by the Financial Action Task Force ("FATF").

For the avoidance of doubt, while the Portfolio will not invest in such securities, they may underlie credit derivatives which the Portfolio uses for hedging purposes only.

The Sub-Investment Manager will exclude companies from the investment universe that manufacture incendiary weapons using white phosphorus or that have an industry tie to nuclear weapons.

The Sub-Investment Manager will exclude securities issued by companies that derive 5% or more of revenue from:

- the production of adult entertainment materials; or
- the production of conventional weapons.

The Sub-Investment Manager will also exclude securities issued by issuers that derive 5% or more of revenue from the production of conventional weapons.

The Sub-Investment Manager:

- (i) excludes securities issued by companies that are involved in controversial activities and behaviour and issuers which are rated worst in terms of the NB ESG Quotient from the investment universe, such that at least 20% of the investment universe is excluded on these bases; and
- (ii) ensures at least 90% ESG coverage rate of the Net Asset Value of the Portfolio.

The Sub-Investment Manager implements a systematic and disciplined framework for analysing sovereign and corporate local currency and Hard Currency debt securities. Decisions on how to allocate the Portfolio's assets between sovereign and corporate and Hard Currency and local currency Asian country debt securities, money market instruments and FDI are dependent on the Sub-Investment Manager's outlook on such securities. This outlook focuses on the global market environment, the economic environment of the relevant Asian countries, the attractiveness of the valuations available in the asset classes and their liquidity. From this outlook, the Sub-Investment Manager determines the amount of risk that it wants the Portfolio to take and seeks to allocate across security types accordingly.

The Sub-Investment Manager believes its global presence provides a local perspective on macro as well as micro events which feeds into the Sub-Investment Manager's overall research.

The Sub-Investment Manager will seek to anticipate yield, spread and currency movements in response to changes in:

- Economic conditions;
- Region, country and sector fundamentals; and
- Issuer specific financial performance and other issuer specific factors (as detailed in the following paragraph).

The Sub-Investment Manager will conduct fundamental analysis on the issuers that they track to seek to identify undervalued and overvalued securities and exploit investment opportunities. The fundamental analysis used for the selection of governments or government-related issuers incorporates quantitative macroeconomic data and qualitative aspects such as political stability and structural reforms, climate change policy and other ESG indicators, such as carbon emission intensity and rule of law (i.e. perceptions and practices where citizens have confidence in and abide by the rules of society, and in particular, the quality of contract enforcement, property rights, the police and the courts as well as the likelihood of crime and violence). The fundamental analysis used for the selection of corporate issuers includes quantitative factors aimed at assessing the issuer's financial performance such as revenue/EBITDA ("earnings before interest, tax, depreciation and amortisation") growth, cash flow growth and capital expenditures. Qualitative factors aim to complement the evaluation of corporate credit worthiness by including such factors as corporate governance, carbon emissions, and other ESG indicators.

On an ancillary basis, the Portfolio may hold equity securities issued by public or private issuers in Asian countries, such as shares, as a result of the conversion of convertible debt securities or restructuring of debt securities.

In order to achieve its investment objective, the Portfolio may take synthetic short positions for investment and hedging purposes. Synthetic short positions are investments using FDI in respect of the types of assets in which the Portfolio may otherwise invest in anticipation of those assets declining in value, which will generate a return in the event that the value of those assets does in fact decline. Such investments will be selected using the criteria described in this "Investment Approach" section.

Under normal market conditions, the Sub-Investment Manager anticipates that the Portfolio's average interest duration will be within the range of +1.5 years and -1.5 years compared to the Benchmark.

The Portfolio is actively managed. Investors may refer to the J.P. Morgan ESG EMBI Global Diversified Index for ESG comparison purposes only. The J.P. Morgan ESG EMBI Global Diversified Index measures the performance of emerging market debt issued by sovereign and quasi-sovereign entities while applying an ESG methodology which overweight issuers ranked higher on ESG criteria and green bond issues and underweights issuers that rank lower, while the Index aims to track the performance of certain eligible US non-investment grade bonds issued in China. However, investors should note that the Portfolio does not intend to track the J.P. Morgan ESG EMBI Global Diversified Index, the Index or the Benchmark. The Index and the Benchmark are included for performance comparison purposes and because the Portfolio's investment policy restricts the extent to which the Portfolio's holdings may deviate from the Benchmark and the Index, as described above and in the "Investment Restrictions" section. This deviation may be significant. The Portfolio gives some consideration to the J.P. Morgan ESG EMBI Global Diversified Index's constituents in identifying sovereign issuers that have been excluded from it for having weak ESG practices, and both the Index's constituents and the Benchmark's constituents in the selection of securities but may not hold all or some of the J.P. Morgan ESG EMBI Global Diversified Index's components, the Index's components or the Benchmark's components. The J.P. Morgan ESG EMBI Global Diversified Index, the Index and the Benchmark have not been designated as reference benchmarks for the purposes of SFDR.

#### Benchmark

J.P. Morgan JESG JACI High Yield Index (Total Return, USD), which tracks the total return performance for actively traded below investment grade rated USD denominated debt instruments in the Asia region (excluding Japan) which meet certain ESG criteria.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

The Benchmark has not been designated as a reference benchmark for the purposes of SFDR.

#### Base Currency

US Dollars (USD).

#### Instruments / Asset Classes

The Portfolio will invest primarily in debt securities and money market instruments rated below investment grade, issued by governments, government agencies and corporate issuers in Asian Countries. The Portfolio can invest in or be exposed to the following types of assets.

**Fixed Income Securities (Debt Securities).** Such debt securities may include bonds, bonds with warrants, convertible bonds, bonds resulting from the restructuring of syndicated loans or bank loans (e.g. "Brady" bonds), subordinated bonds, debentures and notes (including freely transferable and structured notes and freely transferable promissory notes) and may include:

- Fixed and floating rate securities;
- Contingent convertible bonds, subject to a limit of up to 20% of the Portfolio's Net Asset Value;
- Bullet debt securities, in respect of which principal is paid upon maturity, or factor debt securities in respect of which principal is paid according to a pre-determined schedule and which can also specify that specific interest payments be added to the principal instead of being paid in cash;
- Investment grade, high yield and unrated debt securities; and
- Sukuk structures, which are Islamic finance instruments which represent a proportionate beneficial ownership in an asset or pool of assets. For a determined period, the return associated with the cash flows generated from the assets belongs to the Sukuk holders. The

characteristics of a Sukuk are therefore similar to a conventional debt security, with the difference that Sukuks are generally asset-based or asset-backed and carry no interest rate but rather pass the returns generated by the underlying assets to the Sukuk holder.

**Money Market Instruments.** Money market instruments may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as “junk bonds”.

The Portfolio may invest up to 25% of its Net Asset Value in fixed income securities and money market instruments in aggregate that are issued or guaranteed by a single sovereign issuer (including its government, public or local authority) that are below investment grade. Such investments are based on the reference to the Benchmark. As certain Emerging Market Countries may be rated below investment grade, the Sub-Investment Manager believes that it is necessary to retain the flexibility to invest in such securities issued or guaranteed by each such sovereign issuer above 10% of the Portfolio's Net Asset Value in order to achieve the investment objective of the Portfolio. Currently, the single sovereign issuer with a credit rating below investment grade into whose securities the Sub-Investment Manager expects the Portfolio may invest more than 10% of its Net Asset Value is Sri Lanka.

In addition to the 25% limit referred to in the paragraph above, any investment by the Portfolio in money market instruments is separately subject to a limit of 10% of its Net Asset Value.

**Collective Investment Schemes.** In addition, the Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's other investments. Such collective investment schemes may be managed by the Manager and/or the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

**Financial Derivative Instruments (“FDI”).** In addition, the following FDI may be used for hedging, efficient portfolio management and/or investment purposes and subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus:

- Futures, options, warrants, rights, swaps and swaptions on debt securities or money market instruments, UCITS eligible indices and interest rates, which may be used to achieve a profit through gaining exposure to an increase in the value of such securities, indices and interest rates, as well as to hedge existing long positions;
- Total return swaps may be used to hedge or take long or short positions to help achieve specific investment objectives. In addition, total return swaps may be used to achieve a profit through gaining exposure to an increase in the value of securities, indices and interest rates. The maximum proportion of the Portfolio's Net Asset Value that can be subject to total return swaps is 10%. The expected proportion of the Portfolio's Net Asset Value that will be subject to total return swaps is 1%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions;
- Credit default swaps on single issuers, indices and/or baskets of securities which may be used to hedge or take long or short credit positions to help achieve specific investment objectives. It is expected that short credit positions will predominantly be taken for hedging but they may also be used for investment purposes where the Sub-Investment Manager identifies an attractive investment opportunity based on the Sub-Investment Manager's fundamental analysis which indicates deteriorating fundamentals of an issuer and/or that a security is overvalued;
- Forward contracts on fixed income securities may be used to achieve a profit, through gaining exposure to an increase in the value of such securities as well as to hedge existing long positions; and
- Forward and non-deliverable forward currency contracts, currency futures contracts and transactions, currency options, and currency swaps, which may be used to achieve a profit through gaining exposure to an increase in the value of currencies, as well as to hedge existing long currency positions.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Sub-Investment Manager may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

## Bond Connect

The PBoC and the HKMA have approved the CFETS, CCDC, SHCH, together with Hong Kong Exchanges and Clearing Limited and CMU to launch Bond Connect, which is a mutual bond market access programme between Mainland China and Hong Kong. Bond Connect allows investors to trade electronically between the Mainland China and Hong Kong bond markets without quota restrictions and requirements to identify the ultimate investment amount.

Currently, Bond Connect comprises a Northbound Trading Link between CFETS, the operator of the CIBM and offshore trading access platforms recognised by the PBoC, to facilitate investment by Hong Kong and overseas investors (including the Portfolio) in eligible bonds traded on the CIBM. A Southbound Trading Link, facilitating investment in overseas bond markets by Mainland Chinese investors is still under development but is intended to form part of Bond Connect once established.

### Eligible Securities

Hong Kong and overseas investors (including the Portfolio) will be able to trade over the entire range of instruments traded on the CIBM, including products on both the secondary and primary markets.

### Trading Day

Northbound investors (including the Portfolio) are able to trade through Bond Connect on days upon which the CIBM is open to trade, regardless of whether they are a public holiday in Hong Kong.

### Settlement and Custody

Settlement and custody of Northbound bond trades under Bond Connect will be implemented under the link between the CMU of the HKMA and Mainland China's two bond settlement systems, namely, CCDC and SHCH. The CMU settles Northbound trades and holds the CIBM bonds on behalf of its members in nominee accounts with each of CCDC and SHCH. CCDC and SHCH provide services to foreign investors, directly and indirectly, using Bond Connect.

Bonds purchased by Hong Kong and overseas investors (including the Portfolio) are recorded in an omnibus nominee account at CCDC and SHCH in the name of CMU. The CMU itself maintains the bonds in segregated sub-accounts of its members, who in turn may hold the bonds on their own account or on behalf of other investors or custodians. Accordingly, bonds purchased by Hong Kong and overseas purchasers through Bond Connect are held by the purchaser's global or local custodian in a segregated sub-account opened in their name at the CMU.

### Currency

Hong Kong and overseas investors may trade through Bond Connect using offshore RMB (CNH) or by converting foreign currencies into onshore RMB (CNY) under Bond Connect.

Where an investor uses foreign currencies to invest through the Northbound Trading Link, it must open a segregated RMB capital account with an eligible RMB settlement Bank in Hong Kong to convert its foreign currencies into CNY. Where bonds are purchased in CNY in this manner, upon sale of the bonds, the sale proceeds remitted out of Mainland China must be converted back into the relevant foreign currencies.

Further information about Bond Connect is available at:

<http://www.chinabondconnect.com/en/index.htm>

## Investment Restrictions

- A minimum of 80% of the Portfolio's Net Asset Value will be invested in money market instruments and debt securities issued by public or private issuers in Asian countries which are denominated in US Dollars with an average rating between B and BB+ based on a median rating of the Recognised Rating Agencies (as defined in the Prospectus). Where ratings are available from only two of the Recognised Rating Agencies, the lower rating of the two shall

be used.

- The Portfolio may invest up to 10% of its Net Asset Value in money market instruments.
- The Portfolio's investments in warrants are not expected to exceed 2% of the Portfolio's Net Asset Value.
- The Portfolio's investments in contingent convertible bonds are subject to a limit of up to 20% of the Portfolio's Net Asset Value;
- A maximum of 15% of the Portfolio's Net Asset Value may be invested in money market instruments and debt securities issued by public or private issuers in Asian countries which are denominated in the local currency of the relevant Asian country.
- A maximum of 25% of the Portfolio's Net Asset Value may be invested in investment grade securities.
- The Portfolio's over or underweight exposure to securities issued by issuers from any one single country relative to the Benchmark will not exceed 10% of its Net Asset Value.
- The Portfolio's over or underweight exposure to any single industry-sector relative to the Benchmark will not exceed 10% of its Net Asset Value.
- Investments in units of other collective investment schemes are limited to a maximum of 10% of the Portfolio's Net Asset Value.
- The Portfolio will not utilise securities lending or margin lending.
- The anticipated maximum ratio of the value of the long positions to the absolute value of the short positions is 140:80.

## Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the "Investment Risks" section of the Prospectus. While investors should read and consider the entire "Investment Risks" section of the Prospectus, the risks summarised in the following sections, namely, "Market Risks: Risks relating to Debt Securities", "Risks Associated with Investment in the China Interbank Bond Market through Bond Connect" and "Market Risks: Risks Relating to Emerging Market Countries" are particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio is expected to be leveraged up to 150% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced. This expected leverage figure is calculated using the Sum of the Notional values of the derivatives used, as required by the Central Bank. Using this methodology does not reflect any netting or hedging that the Portfolio may have in place. The Portfolio's global exposure is subject to an advanced risk management process which, in compliance with the UCITS Regulations, aims to ensure that on any day the relative VaR of the Portfolio will be no greater than twice the VaR of the Benchmark. The VaR of the Portfolio is a daily estimation of the maximum loss which the Portfolio may incur over a 20 Business Day holding period and is arrived at through quantitative simulations with a 99% one tailed confidence interval and using an historical observation period of at least 250 business days. This process is described in detail in the statement of risk management procedures of the Company and its appendix in respect of the Portfolio. While the Portfolio measures and monitors its global exposure using the VaR approach, rather than by use of the Commitment Approach, the leverage of the Portfolio using the Commitment Approach is expected to be 150% of its Net Asset Value as a result of its use of FDI, although investors should note that higher levels of leverage may be experienced.
- The Sub-Investment Manager may use forward and non-deliverable forward currency contracts, currency futures contracts and transactions, currency options, total return swaps and currency swaps in order to hedge currency risk on a discretionary basis. In addition, the Sub-Investment Manager may use futures, options, warrants, swaps (including credit default swaps and swaptions) on debt securities or money market instruments, indices and interest rates to hedge investments in such instruments. Investors should note that it may not be possible or practical to hedge the Portfolio's exposures to such instruments perfectly and that, where it deems it appropriate, the Sub-Investment Manager may take hedging positions in

respect of other instruments which it considers to be suitable proxies for the Portfolio's investments. The use of such hedging techniques may increase the risk profile of the Portfolio.

### Environmental, Social and Governance ("ESG")

The Portfolio has been classified as an Article 8 Portfolio as it invests in securities issued by those issuers that promote both environmental and social characteristics. In promoting environmental and social characteristics, the Portfolio will also take appropriate measures to ensure that (i) its investments do not significantly harm any of the social objectives or environmental objectives; and (ii) that the issuers in whose securities it invests follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

Accordingly, the Sub-Investment Manager applies the (i) Controversial Weapons Policy (ii) the Sustainable Exclusion Policy and (iii) the Thermal Coal Involvement Policy when determining what investments to make for the Portfolio. Companies which are involved in controversial weapons (anti-personnel mines, cluster weapons, depleted uranium, nuclear weapons, white phosphorus, biological and chemical weapons), direct child labour and the tobacco industry are excluded. Further details on these screening/exclusion policies are set out in the "*Sustainable Investment Criteria*" section of the Prospectus.

The Sub-Investment Manager will also manage the Portfolio in accordance with the ESG Policy on a continuous basis. The Sub-Investment Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process. A summary of the ESG Policy is detailed in Annex VI to the Prospectus and it is available on the Neuberger Berman website, [www.nb.com/esg](http://www.nb.com/esg).

ESG factors are integral to the Sub-Investment Manager's investment process. A summary of how the Sub-Investment Manager integrates ESG factors into their investment processes and portfolio construction is set out in the "*Investment Approach*" section and SFDR Annex below. In particular, investment is prioritised in issuers who have a lower carbon emission intensity and which demonstrate better environmental, social and governance practices than the broader universe of Asian issuers of high yield debt.

In addition, the Portfolio will make meaningful allocations to green, social and sustainability-labelled fixed income securities, dependent on market opportunities.

ESG analysis is performed, with the support of third-party data, by the Sub-Investment Manager and is not outsourced.

The Sub-Investment Manager:

- (i) excludes securities issued by companies that are involved in controversial activities and behaviour and issuers which are rated worst in terms of the NB ESG Quotient from the investment universe, such that at least 20% of the investment universe is excluded on these bases; and
- (ii) ensures at least 90% ESG coverage rate of the Net Asset Value of the Portfolio. In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager intends to reduce the Portfolio's carbon footprint for corporate securities across scope 1, 2, and material scope 3 greenhouse gas emissions<sup>1</sup>, equating to a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Any net-zero commitments and targets are set in the expectation that governments will follow through on their own commitments to ensure the objectives of the Paris Agreement are met, including increasing the ambition of their Nationally Determined Contributions ("NDCs"). Further details on Neuberger Berman's commitment to the Net Zero Asset Managers Initiative are contained in the "*Sustainable Investment Criteria*" section of the Prospectus.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**Typical Investor Profile** Investment in the Portfolio may be suitable for investors who are prepared to accept the general risks associated with investing in below investment grade rated securities from both Asian and non-Asian Emerging Market Countries and the risks of bond markets over the medium to long term, together with medium to high levels of volatility due to the Portfolio's investment policies or portfolio management techniques.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.20%	0.00%
B, C2, E	0.00%	1.20%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.60%	0.00%
M	2.00%	1.20%	0.60%
P	5.00%	0.57%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	0.90%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the "Administration Fees" heading in the "Fees and Expenses" section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 - 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

For further information on fees, please refer to the "Fees and Expenses" section of the Prospectus.

**SFDR Annex**

**1. NEUBERGER BERMAN SUSTAINABLE ASIA HIGH YIELD FUND**

## SFDR ANNEX

### Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

**The EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman Sustainable Asia High Yield Fund (the “Portfolio”)  
**Legal entity identifier:** 5493005FAT85HZ73DG37

## Environmental and/or social characteristics

### Does this financial product have a sustainable investment objective?

Yes		No	
<input type="checkbox"/>	It will make a minimum of <b>sustainable investments with an environmental objective:</b> ___%	<input checked="" type="checkbox"/>	It promotes <b>Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, <b>it will have a minimum proportion of 50% of sustainable investments</b>

<input type="checkbox"/>	It will make a minimum of <b>sustainable investments with a social objective:</b> ___%	<input checked="" type="checkbox"/>	with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/>		<input checked="" type="checkbox"/>	with a social objective
<input type="checkbox"/>		<input type="checkbox"/>	It promotes E/S characteristics, but <b>will not make any sustainable investments</b>

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “NB ESG Quotient”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for issuers by assessing them against certain ESG metrics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below by prioritising investment in securities issued by issuers with a relatively favourable and/or an improving NB ESG Quotient. Pursuant to this, the Sub-Investment Manager will exclude issuers with a poor NB ESG Quotient rating unless there is reasonable expectation that the NB ESG Quotient rating will improve over time.

The following environmental and social characteristics are promoted for corporates, where relevant to the specific industry and issuer, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** biodiversity and land usage, carbon emissions, opportunities in clean technologies, water stress, toxic emissions & waste, financing environmental impact, product carbon footprint, environmental policy, environmental management system, greenhouse gas (“GHG”) reduction programme, green procurement policy and non-GHG air emissions programmes.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager will promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>.

The Portfolio aims to achieve a carbon emission intensity level that is at least 30% lower than that of the broader Asia high yield debt investment universe, represented by the J.P. Morgan Asian Credit High Yield Index (the "Index"). The average carbon emission intensity will be measured and calculated based on the Portfolio's carbon emission intensity struck at each of the four calendar quarter ends. The Portfolio is actively managed and does not intend to track the Index which is included here for carbon emission intensity reduction and ESG comparison purposes.

The Portfolio aims to achieve a higher ESG score as compared to the broader Asia high yield debt investment universe, represented by the Index, based on third party ESG scores from an established external provider.

- **Social Characteristics:** health & safety, human capital development, labour management, privacy & data security, product safety & quality, financial products safety, discrimination policy, community involvement programmes, diversity programmes and human rights policy.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB ESG Quotient methodology will evolve over time and all sector specific ESG characteristics included therein are reviewed regularly and are subject to annual review to ensure that the most pertinent sector specific ESG characteristics are captured. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. The NB ESG Quotient focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of being included in the Portfolio.

---

<sup>1</sup> Scope 1 emissions are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

The Sub-Investment Manager will exclude issuers with a poor NB ESG Quotient rating unless there is reasonable expectation that the NB ESG Quotient rating will improve over time.

## II. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in securities issued by issuers whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in securities issued by issuers that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. The Portfolio will also exclude companies from the investment universe that manufacture incendiary weapons using white phosphorus or that have an industry tie to nuclear weapons. The Portfolio will exclude securities issued by companies that derive 5% or more of revenue from the production of adult entertainment materials; or the production of conventional weapons. Furthermore, investments held by the Portfolio will not invest in securities issued by issuers whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Neuberger Berman Sustainable Exclusion Policy is applied when determining what investments to make for the Portfolio. Additionally, issuers which are involved in, direct child labour and the tobacco industry are excluded. Further details on these ESG exclusion policies are set out in the "Sustainable Investment Criteria" section of the main body of the Prospectus.

The Portfolio will not invest in debt securities or money market instruments issued by sovereign or 100% government-owned issuers which are identified by the Sub-Investment Manager as having weak ESG practices and such issuers will be excluded from the Portfolio. Such exclusions will be based on a number of ESG criteria including the following:

- Sovereign issuers which are ranked in the bottom decile based on the NB ESG Quotient, with no near term improvement prospects; or
- Sovereign issuers which are excluded from the J.P. Morgan ESG EMBI Global Diversified Index based on ESG considerations; or
- Sovereign issuers where top officials have been sanctioned by the UN Security Council based on human rights violations; or
- Sovereign issuers which are assessed as having high and increasing greenhouse gas intensity levels; or
- Sovereign issuers which are non-compliant with the standard put forth by the OECD's Global Forum on Transparency and Exchange of Information for Tax Purposes, or sovereign issuers that are classified as a high risk jurisdiction subject to a call for action by the FATF.

For the avoidance of doubt, while the Portfolio will not invest in such securities, they may underlie credit derivatives which the Portfolio uses for hedging purposes.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; and (ii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

### ● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold sustainable investments which will aim to promote the environmental & social characteristics listed above and will aim to contribute to the Portfolio's net zero goal, as detailed below.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB's sustainable investment framework. This framework includes an assessment

as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of an issuer's overall governance score to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Sub-Investment Manager utilises multiple datapoints that measure the alignment of an issuer's economic activity with environmental or social characteristics.

The Sub-Investment Manager screens corporate issuers for controversies, significant harm and violations of minimum safeguards. If the corporate issuers pass this screen, the Sub-Investment Manager then proceeds to measure the corporate issuers' environmental or social economic contribution.

The Sub-Investment Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs") (if any).

Sustainable investments are more likely to have product/service revenue aligned with the SDGs.

Both the sustainable and non-sustainable investments held by the Portfolio will target net zero alignment by 2050.

While the sustainable investments may have a social or an environmental objective, the Sub-Investment Manager does not commit the Portfolio to holding sustainable investments that qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Sub-Investment Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "*How have the indicators for adverse impacts on sustainability factors been taken into account?*" below) and violations of minimum safeguards (with respect to which see "*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*" below).

The Sub-Investment Manager also applies the ESG exclusion policies referenced above.

The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

*How have the indicators for adverse impacts on sustainability factors been taken into account?*

The Sub-Investment Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective:

GHG emissions; carbon footprint; GHG intensity of corporate issuers; exposure to issuers active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators in respect of the sustainable investments of the Portfolio, and may evolve with improving data quality and availability.

The Sub-Investment Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with issuers to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring issuers which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with issuers which fall below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the following Neuberger Berman ESG exclusionary policies detailed above, which includes consideration of several of the PAIs.

--- *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Sub-Investment Manager will not invest in issuers whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

N/A – this Portfolio does not commit to holding Taxonomy-aligned investments.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

Yes. The Sub-Investment Manager considers PAIs with respect to the Portfolio in two ways:

1. All PAIs are considered when determining whether sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective as explained in “*How have the indicators for adverse impacts on sustainability factors been taken into account?*” above.
2. The Sub-Investment Manager will consider the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promote environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

See “*How have the indicators for adverse impacts on sustainability factors been taken into account?*” above for more details on how the PAIs are considered with respect to sustainable investments.

With respect to the Product Level PAIs, the Sub-Investment Manager utilises third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select corporate issuers asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with issuers to encourage disclosure and to gather wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs it considers under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

### What investment strategy does this financial product follow?

The Portfolio aims to outperform the JP Morgan JESG JACI High Yield Index (Total Return, USD), before fees over a market cycle (typically 3 years) by primarily investing in below investment grade rated Hard Currency-denominated debt instruments issued in Asian countries that comply with the Neuberger Berman Sustainable Exclusion Policy.

In aiming to align the Portfolio with a net zero goal, the Sub-Investment Manager intends to reduce the Portfolio's carbon footprint for corporate securities across scope 1, 2, and material scope 3 GHG emissions, equating to a 50% reduction by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Any net-zero commitments and targets are set in the expectation that governments will follow through on their own commitments to ensure the objectives of the Paris Agreement are met, including increasing the ambition of their Nationally Determined Contributions ("NDCs"). Further details on Neuberger Berman's commitment to the Net Zero Asset Managers Initiative are contained in the "Sustainable Investment Criteria" section of the Prospectus.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. The Sub-Investment Manager will exclude issuers with a poor NB ESG Quotient rating unless there is reasonable expectation that the NB ESG Quotient rating will improve over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, credit worthiness is complemented by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

- I. Integrating proprietary ESG analysis:

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The NB ESG Quotient ratings are generated for issuers in the Portfolio. The NB ESG Quotient rating for issuers is utilised to help to better identify risks and opportunities in the overall credit and value assessment.

The NB ESG Quotient is an important component of the internal credit ratings and can help to identify business risks (including ESG risks), which would cause deterioration in an issuer's credit profile. Internal credit ratings can be notched up or down based on the NB ESG Quotient rating, and this is monitored by the Sub-Investment Manager as an important component of the investment process for the Portfolio.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into their internal credit ratings, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Issuers with a favourable and/or an improving NB ESG Quotient rating have a higher chance of ending up in the Portfolio. The Sub-Investment Manager will exclude issuers with a poor NB ESG Quotient rating unless there is reasonable expectation that the NB ESG Quotient rating will improve over time.

## II. Engagement:

The Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process (including the investment selection process). Issuers that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings, email and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of issuers. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the issuers to attain. These objectives as well as the issuers' progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

The Sub-Investment Manager firmly believes this consistent engagement with issuers can help reduce credit risk and promote positive sustainable corporate change. It is an important tool to identify and better understand an issuer's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for creditors and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

## III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

### ● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-Investment Manager will reduce the investment universe by 20% through the application of ESG exclusions, as detailed above, and ESG analysis.

### ● ***What is the policy to assess good governance practices of the investee companies?***

The governance factors that the Sub-Investment Manager tracks for corporate and quasi-sovereign issuers may include: (i) senior management experience and sector expertise; (ii) ownership/board experience and alignment of incentives; (iii) corporate strategy and balance sheet strategy; (iv) financial and accounting strategy & disclosure; and (v) regulatory / legal track record.

The governance factors that the Sub-Investment Manager tracks in relation to Emerging Market Countries include (i) the political sphere of the relevant country, (ii) the adherence to the rule of law, (iii) control of corruption, political uncertainty related to upcoming elections and (iv) a focus of the quality of economic governance, namely the government's role as an effective regulator and support of the private sector through responsible financial, macroeconomic and international trade policies.

**Good governance practices** include sound management structures, employee relations, remuneration of staff and tax compliance.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of issuers through a robust ESG engagement program. This program is focused on in-person meetings, email and conference calls to understand risks, opportunities and assess good corporate governance practices of corporate issuers. The Sub-Investment Manager views this direct engagement with issuers, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at an issuer, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

### What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding a minimum of 50% in

sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the 'other' section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● ***How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?***

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● ***Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>2</sup>***

- Yes:
- In fossil gas       In nuclear energy
- No

---

<sup>2</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

**What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

**What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in issuers that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmarks have not been designated as reference benchmarks. Therefore, they are not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

N/A

- ***How does the designated index differ from a relevant broad market index?***

N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## SUSTAINABLE EQUITY SUPPLEMENT

### 6 DECEMBER 2023

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-funds, each of which is a separate portfolio of the Company:

**NEUBERGER BERMAN GLOBAL SUSTAINABLE EQUITY FUND**

**NEUBERGER BERMAN EUROPEAN SUSTAINABLE EQUITY FUND**

(the “Portfolios”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to the Portfolios, this Supplement shall prevail. Each SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the relevant Portfolio in accordance with SFDR. Each SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of an SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR for a Portfolio, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	with respect to each Portfolio, a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in each Portfolio;
<b>Dealing Deadline</b>	11.00 am (Irish time) on the relevant Dealing Day in respect of each Portfolio. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 12.30 pm (Irish time) on the relevant Dealing Day;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of a Portfolio;
<b>Portfolios</b>	the Neuberger Berman Global Sustainable Equity Fund and the Neuberger Berman European Sustainable Equity Fund;
<b>SFDR Annex</b>	each annex hereof setting out the pre-contractual disclosures template with respect to a Portfolio, prepared in accordance with the requirements of Article 8 of SFDR; and
<b>Sub-Investment Manager</b>	with respect to the Neuberger Berman Global Sustainable Equity Fund and the Neuberger Berman European Sustainable Equity Fund, Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC or such other company as may be appointed by the Manager from time to time in respect of any particular Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolios carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “*Risk*” section of the information specific to each Portfolio, as included in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolios will achieve their respective objectives. While there are some risks described below that may be common to a number or all of the Portfolios, there may also be specific risk considerations which apply only to particular Portfolios.

### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolios shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter; and
- each of the other Distributing Classes in the other Portfolios shall be declared on an annual basis and paid within 30 Business Days thereafter in relation to the Net Income of the Distributing Classes for the calendar year ended the previous 31 December.

### Subscriptions and Redemptions

Subscriptions for Shares in all Classes of each Portfolio which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched, from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolios will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman Global Sustainable Equity Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing in FDI as described below. The Portfolio will not use FDI extensively or primarily for investment purposes.**

### Investment Objective

The Portfolio aims to achieve a minimum excess annualised return of 2% over the Benchmark (as specified in the “*Benchmark*” section below) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of global equity holdings that comply with the Sustainable Criteria (as set out in the Prospectus).

Investors should note that the target return is not guaranteed over the investment horizon, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of the investment horizon, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

### Investment Approach

The Portfolio will seek to achieve its objective by investing primarily in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and industrial sectors. The Portfolio will invest primarily in equity securities issued by companies whose behaviours, processes and operations contribute to system-level progress towards environmental and social objectives, such as: access to healthcare, sustainable consumption (which is the use of products, energy and services so as to minimise the environmental impact of such use) and conscious consumers, access to information and the digital revolution, energy transition and industrial innovation, resource efficiency, human capital development, fintech and financial inclusion (which is the availability and equality of opportunities to access financial services).

In seeking to achieve the Portfolio’s investment objective, the Manager invests in high quality companies, which (i) provide attractive sustainable products or services, (ii) demonstrate a commitment to sustainability in their operations, and (iii) are economically competitive, as described in greater detail below. The Manager will pursue an investment process which will embed analysis of “best in class” companies within an investment universe of listed equity securities issued by companies primarily from developed market countries globally, from both a financial and an ESG perspective as detailed below. The financial and ESG analysis will enable the Manager to evaluate and identify companies that are deemed “best in class” in terms of their performance on financial and ESG factors.

- Financial analysis: the Manager will consider companies that it believes have an enduring competitive advantage, i.e. a position within their relevant market which enables them to defend and grow their market share, returns and assets. This part of the investment process includes significant analysis of the value chain within which these companies operate, to determine which are the most enduring, profitable and attractive segments. The Manager believes these enduring advantages are demonstrated through best in class product offerings, technological advancements, patent protection and cost leadership. This should be reflected in companies’ having a record of financial success through highly resilient and attractive cash flow return on invested capital (CFROI) relative to their cost of capital; strong business momentum, as reflected in a structural growth of the asset base driven by the size and growth of their total addressable markets; low leverage and therefore resilient balance sheets; good accounting quality; strong management with financial incentives which are fully aligned to long term business model success; and these characteristics should be on offer for an attractive long term valuation perspective. The Manager conducts in-person and on-line management meetings with members of senior management of the relevant companies to assess these business metrics, any direction of change and the quality of the management team.
- ESG analysis: the Manager will first exclude companies from the investment universe that are involved in controversial activities and behaviour, such as the production of controversial weapons, fur manufacturers, gambling, alcohol, nuclear power or non-compliance with the UNGC Principles. The application of the Enhanced Sustainable Exclusion Policy, as such terms are defined within the “*Sustainable Investment Criteria*”

section of the Prospectus, also means that companies involved in tobacco, civilian firearms, private prisons and fossil fuels will also be excluded.

The Manager will then exclude companies from the investment universe that show poorly on their overall ESG assessment (measured using third party ratings). The third party ratings and the NB ESG Quotient will consider the environmental and social characteristics listed in the SFDR Annex. The Manager will also ensure that securities representing at least 90% of the Net Asset Value of the Portfolio are covered by this assessment.

Through the above ESG exclusionary steps, the Manager will exclude at least 20% of components of the investment universe.

The Manager will conduct in-depth research of companies' ESG profiles, which includes analysis to support the selection of universe constituents that positively contribute to environmental and social outcomes through their operations, practices and behaviour, or through their products and services.

Each company that is retained following the above analysis will then go through an optimisation of risk process, whereby each security's contribution to the total risk budget in relation to its upside potential, correlation and volatility features and predictability of the business models will be assessed in order to build a concentrated global portfolio typically in the range of 40-60 stocks, reflecting high convictions, value chain diversification and strong resilience of business models.

The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes and because the Portfolio's investment policy restricts the extent to which the Portfolio's holdings may deviate from the Benchmark, as described in the "*Investment Restrictions*" section below. This deviation may be significant. Under normal market conditions, the Manager would anticipate that the tracking error would be within the range of 2 – 6%.

Investors should note that this Portfolio seeks to apply the Sustainable Exclusion Policy that has been adopted by the Manager along with the application of the exclusions set out in the Enhanced Sustainable Exclusion Policy, as such terms are defined within the "*Sustainable Investment Criteria*" section of the Prospectus. Investors should refer to the information contained in that section and the SFDR Annex for further details about the application of both the Sustainable Exclusion Policy and Enhanced Sustainable Exclusion Policy to the Portfolio.

---

#### Benchmark

The MSCI World Index (Total Return, Net of Tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed markets.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

#### Base Currency

US Dollars (USD).

---

#### Instruments / Asset Classes

The Portfolio will invest primarily in equity securities issued by issuers in any sector globally. The Portfolio can invest in or be exposed to the following types of assets.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, rights, warrants (which will be received as a result of a corporate actions or acquired in the secondary market), convertible preferred stock and American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution. A secondary market offering is a registered offering of a large block of a security that has been previously issued to the public.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property.

---

The REITs which the Portfolio will invest in may be based globally but will give exposure to underlying properties located in Emerging Market Countries. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.

**Money Market Instruments.** In addition, the Portfolio may also invest on an ancillary basis in cash and cash equivalents including certificates of deposits, treasury deposits.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's investments in equity securities, as described above, provided that the Portfolio may not invest in other collective investment schemes which themselves invest more than 10% of its Net Asset Value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager or its affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions and will qualify as UCITS or non-UCITS schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute VaR exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative VaR exceeds twice the VaR of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment schemes measure their global exposure.

**Financial Derivative Instruments ("FDIs").** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, the Portfolio may use FDI for hedging, efficient portfolio management and/or investment purposes and subject to the conditions and limits imposed by the Central Bank as set out in this Supplement:

- Futures contracts on equity securities and currencies may be used to hedge or to gain an increase in the value of securities of the types described above;
- Options on indices and equity securities may be used to achieve a profit as well as to hedge existing long positions;
- Equity swaps may be used to achieve a profit as well as to hedge existing long positions; and
- Forward contracts and currency options may be used to achieve a profit as well as to hedge existing long currency exposures.

The Portfolio can invest up to 100% of its Net Asset Value in futures contracts to gain exposure to an increase in the value of a security, currency or deposit in order to make temporary adjustments arising from subscription and redemption transactions, provide liquidity and/or to hedge currency risk.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Manager may be invested in the other types of securities listed above. The Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return.

Any indices to which exposure is taken through FDI will be broad-based, UCITS-eligible indices which provide exposure to the performance of the types of assets in which the Portfolio may invest, as described in this "*Instruments/Asset Classes*" section. Where exposure is gained to a particular index or indices through the use of any of the FDI outlined above, additional information on the relevant index or indices (including information on the rebalancing frequency of the relevant index) shall be made available in the annual reports of the Company.

**Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the “*Investment Restrictions*” section of the Prospectus and the UCITS Regulations.
- The Portfolio may not hold in excess of 10% of its Net Asset Value in cash.
- The Portfolio's overweight exposure to a particular Global Industry Classification Standard (GICS)<sup>®</sup> economic sector, relative to the Benchmark, may not exceed 5% of its Net Asset Value.
- The Portfolio's over or underweight exposure to countries relative to the Benchmark will not exceed 15% of its Net Asset Value.
- The Portfolio may invest up to a maximum of 10% of its Net Asset Value in Emerging Market Countries' equities.
- The Portfolio will not invest more than 10% of its net asset value in REITs.
- The Portfolio may invest up to a maximum of 10% of its Net Asset Value in warrants.
- The Portfolio will not utilise securities lending, repurchase and reverse repurchase agreements or margin lending.

**Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. Investors should read and consider the entire “*Investment Risks*” section of the Prospectus. The risks summarised in under “*Concentration Risk*”, within the “*Market Risks*” section, are particularly relevant to the Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Manager may use future foreign currency exchange contracts in order to hedge some currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

**Environmental, Social and Governance (“ESG”)**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

The Portfolio invests in securities that meet the Manager's criteria set out in the Sustainable Exclusion Policy and excludes securities prohibited by the Enhanced Sustainable Exclusion Policy, as detailed in the “*Sustainable Investment Criteria*” section of the Prospectus.

The Manager applies the Sustainable Criteria, which are aligned to enhanced industry sustainable standards. This allows the Portfolio to focus on potential investments that feature strong sustainability qualities such as sustainable behaviour, sustainable solution providers and ESG integration in their businesses.

Through the financial and ESG analysis outlined in the “*Investment Approach*” section above, the investment universe is aligned with the ESG characteristics (as detailed in the SFDR Annex) promoted by the Portfolio.

The investment universe is specifically created by the Manager to meet and deliver the ESG characteristics (as detailed in the SFDR Annex) promoted by the Portfolio. To achieve this the Manager applies a two-step process to the investment universe to ensure that it consists of securities which meet the Sustainable Criteria.

The Manager will first exclude companies from the investment universe that are involved in controversial activities and behaviour, such as the production of controversial weapons,

fur manufacturers, gambling, alcohol, nuclear power or non-compliance with the UNGC Principles. The application of the Enhanced Sustainable Exclusion Policy also means that companies involved in tobacco, civilian firearms, private prisons and fossil fuels will also be excluded.

The Manager will then exclude companies from the investment universe that show poorly on their overall ESG assessment (measured using third party ratings). The third party ratings and the NB ESG Quotient will consider the environmental and social characteristics listed in the SFDR Annex. The Manager will also ensure that securities representing at least 90% of the Net Asset Value of the Portfolio are covered by this assessment.

Through the above ESG exclusionary steps, the Manager will exclude at least 20% of components of the investment universe.

In addition, as part of the investment process, the Manager considers a variety of environmental and social characteristics, as detailed in the “*Investment Approach*” section above. The Neuberger Berman Global Sustainable Equity (“GSE”) Team within the Manager prefers to analyse the world looking through a “*Value Chain Lens*”. This lens allows the GSE Team to view and understand sustainability issues from multiple perspectives via a bottom-up ESG assessment, to better understand the role of technological developments and disruptions, to identify the full playing field of competitive forces in a value chain and to select the winners from those dynamics. This lens helps the GSE Team to positively select transition winners based on their durable competitive positions, ‘do no significant harm’ profiles and adaptation abilities. The Value Chain Lens captures most of the daily economic activities: how the economy is powered, how people stay healthy, consume and pay for or finance their activities and also how the future enterprise is evolving. Sustainability issues are complex and the GSE Team’s Value Chain Lens provides a distinctive and effective approach to differentiate between perspectives and supports the holistic thinking needed to analyse these. This is important as sustainability captures both environmental and social issues which can be seen as interrelated, parts of wider meta-problems or interlocking crises. The GSE Team has defined five value chains: Energy Transition, Access to Healthcare, Conscious Consumer, FinTech and Financial Inclusion and Digital Enterprise which are considered as part of their bottom-up ESG assessment.

One of the data inputs for the bottom-up ESG assessment of companies is the NB ESG Quotient. The NB ESG Quotient is built around the concept of sector specific ESG risk. Foundational to the NB ESG Quotient is the NB materiality matrix, which focuses on the ESG characteristics that are considered to be the most material drivers of ESG risk for each sector. The NB materiality matrix enables the Manager to derive the NB ESG Quotient rating, to compare companies relative to their environmental and social characteristics.

The Manager also applies the Global Standards Policy which prevents investment in companies that most egregiously violate environmental and/or social minimum standards.

Additionally, the Portfolio will not invest in companies that derive more than 5% of their revenue from fur and specialty leather manufacturers or military contractors.

This allows the Portfolio to drive strong, continually improving performance on material environmental and social factors which contribute to a more sustainable world.

In aiming to align the Portfolio with a net-zero goal, the Manager intends to have at least 90% of the Portfolio’s Net Asset Value invested in companies with Science-Based Target initiative (“SBTi”)<sup>1</sup> validated targets (or equivalent as assessed by Neuberger Berman’s net-zero sector alignment methodology, which conforms with the IIGCC target setting guidance<sup>2</sup>) by 2030 and to reach 100% of the Portfolio’s Net Asset Value by 2050. Additionally, the Portfolio must reduce its carbon footprint across scope 1, 2, and material

<sup>1</sup> The SBTi is a partnership between CDP, the United Nations Global Compact, World Resources Institute and the World Wide Fund for Nature which enables companies to set science-based emissions reduction targets.

<sup>2</sup> The IIGCC created the Net Zero Investment Framework to assist asset owners and asset managers to develop net zero investment strategies or to fulfil the requirements of net zero commitments. The IIGCC’s target setting guidance is a component of the Net Zero Investment Framework.

scope 3 GHG emissions<sup>3</sup>, by a minimum of 30% by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to recalculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for an investor seeking capital appreciation over a medium-to-long term horizon. The investor should be prepared to accept periods of market volatility and the risks of the stock market in pursuit of long-term goals.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.50%	0.00%
B, C2, E	0.00%	1.50%	1.00%

<b>E</b>	3%	2%	1%	0%	0%

<sup>3</sup> Scope 1 emissions: are direct emissions from an issuer’s owned or controlled sources (such as emissions created directly by the issuer’s business processes or from vehicles owned by the issuer). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions: are all other indirect emissions that occur in an issuer’s value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

## Neuberger Berman European Sustainable Equity Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing in FDI as described below. The Portfolio will not use FDI extensively or primarily for investment purposes.**

### Investment Objective

The Portfolio aims to achieve a minimum excess annualised return of 2% over the Benchmark (as specified in the “*Benchmark*” section below) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of European equity holdings that comply with the Sustainable Criteria (as set out in the Prospectus).

Investors should note that the target return is not guaranteed over the investment horizon, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of the investment horizon, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

### Investment Approach

The Portfolio will seek to achieve its objective by investing primarily in equity securities that are listed or traded on Recognised Markets in Europe (which may include Emerging Market Countries) and issued by companies across all market capitalisations and industrial sectors. The Portfolio will invest primarily in equity securities issued by companies whose behaviours, processes and operations contribute to system-level progress towards environmental and social objectives, such as: access to healthcare, sustainable consumption (which is the use of products, energy and services so as to minimise the environmental impact of such use) and conscious consumers, access to information and the digital revolution, energy transition and industrial innovation, resource efficiency, human capital development, fintech and financial inclusion (which is the availability and equality of opportunities to access financial services).

In seeking to achieve the Portfolio’s investment objective, the Manager invests in high quality companies, which (i) provide attractive sustainable products or services, (ii) demonstrate a commitment to sustainability in their operations, and (iii) are economically competitive, as described in greater detail below. The Manager will pursue an investment process which will embed analysis of “best in class” companies within an investment universe of listed equity securities issued by companies primarily from developed market countries in Europe, from both a financial and an ESG perspective as detailed below. The financial and ESG analysis will enable the Manager to evaluate and identify companies that are deemed “best in class” in terms of their performance on financial and ESG factors.

- Financial analysis: the Manager will consider companies that it believes have an enduring competitive advantage, i.e. a position within their relevant market which enables them to defend and grow their market share, returns and assets. This part of the investment process includes significant analysis of the value chain within which these companies operate, to determine which are the most enduring, profitable and attractive segments. The Manager believes these enduring advantages are demonstrated through best in class product offerings, technological advancements, patent protection and cost leadership. This should be reflected in companies’ having a record of financial success through highly resilient and attractive cash flow return on invested capital (CFROI) relative to their cost of capital; strong business momentum, as reflected in a structural growth of the asset base driven by the size and growth of their total addressable markets; low leverage and therefore resilient balance sheets; good accounting quality; strong management with financial incentives which are fully aligned to long term business model success; and these characteristics should be on offer for an attractive long term valuation perspective. The Manager conducts in-person and on-line management meetings with members of senior management of the relevant companies to assess these business metrics, any direction of change and the quality of the management team.
- ESG analysis: the Manager will first exclude companies from the investment universe that are involved in controversial activities and behaviour, such as the production of controversial weapons, fur manufacturers, gambling, alcohol, nuclear power or non-compliance with the UNGC Principles. The application of the Enhanced Sustainable Exclusion Policy, as such terms are defined within the “Sustainable Investment Criteria”

section of the Prospectus, also means that companies involved in tobacco, civilian firearms, private prisons and fossil fuels will also be excluded.

The Manager will then exclude companies from the investment universe that show poorly on their overall ESG assessment (measured using third party ratings). The third party ratings and the NB ESG Quotient will consider the environmental and social characteristics listed in the SFDR Annex. The Manager will also ensure that securities representing at least 90% of the Net Asset Value of the Portfolio are covered by this assessment.

Through the above ESG exclusionary steps, the Manager will exclude at least 20% of components of the investment universe.

The Manager will conduct in-depth research of companies' ESG profiles, which includes analysis to support the selection of universe constituents that positively contribute to environmental and social outcomes through their operations, practices and behaviour, or through their products and services.

Each company that is retained following the above analysis will then go through an optimisation of risk process, whereby each security's contribution to the total risk budget in relation to its upside potential, correlation and volatility features and predictability of the business models will be assessed in order to build a concentrated portfolio typically in the range of 30-50 stocks, reflecting high convictions, value chain diversification and strong resilience of business models.

The Portfolio is actively managed and does not intend to track the Benchmark which is included here for performance comparison purposes and because the Portfolio's investment policy restricts the extent to which the Portfolio's holdings may deviate from the Benchmark, as described in the "*Investment Restrictions*" section below. This deviation may be significant. Under normal market conditions, the Manager would anticipate that the tracking error would be within the range of 2 – 6%.

Investors should note that this Portfolio seeks to apply the Sustainable Exclusion Policy that has been adopted by the Manager along with the application of the exclusions set out in the Enhanced Sustainable Exclusion Policy, as such terms are defined within the "*Sustainable Investment Criteria*" section of the Prospectus. Investors should refer to the information contained in that section and the SFDR Annex for further details about the application of both the Sustainable Exclusion Policy and Enhanced Sustainable Exclusion Policy to the Portfolio.

---

#### **Benchmark**

The MSCI Europe Index (Total Return, Net of Tax, EUR) is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed markets in Europe.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

#### **Base Currency**

Euro (EUR).

---

#### **Instruments / Asset Classes**

The Portfolio will invest primarily in equity securities issued by issuers located in or carrying out the major part of their activities in Europe in any industrial sector in Europe. The Portfolio can invest in or be exposed to the following types of assets.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, rights, warrants (which will be received as a result of a corporate actions or acquired in the secondary market), convertible preferred stock and American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution. A secondary market offering is a registered offering of a large block of a security that has been previously issued to the public.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property.

---

The REITs which the Portfolio will invest in may be based in Europe but will give exposure to underlying properties located in Emerging Market Countries. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.

**Money Market Instruments.** In addition, the Portfolio may also invest on an ancillary basis in cash and cash equivalents including certificates of deposits, treasury deposits.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's investments in equity securities, as described above, provided that the Portfolio may not invest in other collective investment schemes which themselves invest more than 10% of its Net Asset Value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager or its affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions and will qualify as UCITS or non-UCITS schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute VaR exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative VaR exceeds twice the VaR of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment schemes measure their global exposure.

**Financial Derivative Instruments ("FDIs").** Subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and in this Supplement, the Portfolio may use FDI for hedging, efficient portfolio management and/or investment purposes and subject to the conditions and limits imposed by the Central Bank as set out in this Supplement:

- Futures contracts on equity securities and currencies may be used to hedge or to gain an increase in the value of securities of the types described above;
- Options on indices and equity securities may be used to achieve a profit as well as to hedge existing long positions;
- Equity swaps may be used to achieve a profit as well as to hedge existing long positions; and
- Forward contracts and currency options may be used to achieve a profit as well as to hedge existing long currency exposures.

The Portfolio can invest up to 100% of its Net Asset Value in futures contracts to gain exposure to an increase in the value of a security, currency or deposit in order to make temporary adjustments arising from subscription and redemption transactions, provide liquidity and/or to hedge currency risk.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Manager may be invested in the other types of securities listed above. The Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to add excess return.

Any indices to which exposure is taken through FDI will be broad-based, UCITS-eligible indices which provide exposure to the performance of the types of assets in which the Portfolio may invest, as described in this "*Instruments/Asset Classes*" section. Where exposure is gained to a particular index or indices through the use of any of the FDI outlined above, additional information on the relevant index or indices (including information on the rebalancing frequency of the relevant index) shall be made available in the annual reports of the Company.

**Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the “*Investment Restrictions*” section of the Prospectus and the UCITS Regulations.
- The Portfolio may not hold in excess of 10% of its Net Asset Value in cash.
- The Portfolio’s overweight exposure to a particular Global Industry Classification Standard (GICS)<sup>®</sup> economic sector, relative to the Benchmark, may not exceed 5% of its Net Asset Value.
- The Portfolio’s over or underweight exposure to countries relative to the Benchmark will not exceed 15% of its Net Asset Value.
- The Portfolio may invest up to a maximum of 10% of its Net Asset Value in Emerging Market Countries’ equities.
- The Portfolio will not invest more than 10% of its net asset value in REITs.
- The Portfolio may invest up to a maximum of 10% of its Net Asset Value in warrants.
- The Portfolio will not utilise securities lending, repurchase and reverse repurchase agreements or margin lending.

**Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. Investors should read and consider the entire “*Investment Risks*” section of the Prospectus. The risks summarised in under “*Concentration Risk*”, within the “*Market Risks*” section, are particularly relevant to the Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Manager may use future foreign currency exchange contracts in order to hedge some currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio’s Net Asset Value, as measured using the Commitment Approach, at any time.

**Environmental, Social and Governance (“ESG”)**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

The Portfolio invests in securities that meet the Manager’s criteria set out in the Sustainable Exclusion Policy and excludes securities prohibited by the Enhanced Sustainable Exclusion Policy, as detailed in the “*Sustainable Investment Criteria*” section of the Prospectus.

The Manager applies the Sustainable Criteria, which are aligned to enhanced industry sustainable standards. This allows the Portfolio to focus on potential investments that feature strong sustainability qualities such as sustainable behaviour, sustainable solution providers and ESG integration in their businesses.

Through the financial and ESG analysis outlined in the “*Investment Approach*” section above, the investment universe is aligned with the ESG characteristics (as detailed in the SFDR Annex) promoted by the Portfolio.

The investment universe is specifically created by the Manager to meet and deliver the ESG characteristics (as detailed in the SFDR Annex) promoted by the Portfolio. To achieve this, the Manager applies a two-step process to the investment universe to ensure that it consists of securities which meet the Sustainable Criteria.

The Manager will first exclude companies from the investment universe that are involved in controversial activities and behaviour, such as the production of controversial weapons,

---

fur manufacturers, gambling, alcohol, nuclear power or non-compliance with the UNGC Principles. The application of the Enhanced Sustainable Exclusion Policy also means that companies involved in tobacco, civilian firearms, private prisons and fossil fuels will also be excluded.

The Manager will then exclude companies from the investment universe that show poorly on their overall ESG assessment (measured using third party ratings). The third party ratings and the NB ESG Quotient will consider the environmental and social characteristics listed in the SFDR Annex. The Manager will also ensure that securities representing at least 90% of the Net Asset Value of the Portfolio are covered by this assessment.

Through the above ESG exclusionary steps, the Manager will exclude at least 20% of components of the investment universe.

In addition, as part of the investment process, the Manager considers a variety of environmental and social characteristics, as detailed below. The Neuberger Berman Global Sustainable Equity (“GSE”) Team within the Manager prefers to analyse the world looking through a “*Value Chain Lens*”. This lens allows the GSE Team to view and understand sustainability issues from multiple perspectives via a bottom-up ESG assessment, to better understand the role of technological developments and disruptions, to identify the full playing field of competitive forces in a value chain and to select the winners from those dynamics. This lens helps the GSE Team to positively select transition winners based on their durable competitive positions, ‘do no significant harm’ profiles and adaptation abilities. The Value Chain Lens captures most of the daily economic activities: how the economy is powered, how people stay healthy, consume and pay for or finance their activities and also how the future enterprise is evolving. Sustainability issues are complex and the GSE Team’s Value Chain Lens provides a distinctive and effective approach to differentiate between perspectives and supports the holistic thinking needed to analyse these. This is important as sustainability captures both environmental and social issues which can be seen as interrelated, parts of wider meta-problems or interlocking crises. The GSE Team has defined five value chains: Energy Transition, Access to Healthcare, Conscious Consumer, FinTech and Financial Inclusion and Digital Enterprise which are considered as part of their bottom-up ESG assessment.

One of the data inputs for the bottom-up ESG assessment of companies is the NB ESG Quotient. The NB ESG Quotient is built around the concept of sector specific ESG risk. Foundational to the NB ESG Quotient is the NB materiality matrix, which focuses on the ESG characteristics that are considered to be the most material drivers of ESG risk for each sector. The NB materiality matrix enables the Manager to derive the NB ESG Quotient rating, to compare companies relative to their environmental and social characteristics.

The Manager also applies the Global Standards Policy which prevents investment in companies that most egregiously violate environmental and/or social minimum standards.

Additionally, the Portfolio will not invest in companies that derive more than 5% of their revenue from fur and specialty leather manufacturers or military contractors.

This allows the Portfolio to drive strong, continually improving performance on material environmental and social factors which contribute to a more sustainable world.

In aiming to align the Portfolio with a net-zero goal, the Manager intends to have at least 90% of the Portfolio’s Net Asset Value invested in companies with Science-Based Target initiative (“**SBTi**”)<sup>1</sup> validated targets (or equivalent as assessed by Neuberger Berman’s net-zero sector alignment methodology, which conforms with the IIGCC target setting guidance<sup>2</sup>) by 2030 and to reach 100% of the Portfolio’s Net Asset Value by 2050. Additionally, the Portfolio must reduce its carbon footprint across scope 1, 2, and material

---

<sup>1</sup> The SBTi is a partnership between CDP, the United Nations Global Compact, World Resources Institute and the World Wide Fund for Nature which enables companies to set science-based emissions reduction targets.

<sup>2</sup> The IIGCC created the Net Zero Investment Framework to assist asset owners and asset managers to develop net zero investment strategies or to fulfil the requirements of net zero commitments. The IIGCC’s target setting guidance is a component of the Net Zero Investment Framework.

scope 3 GHG emissions<sup>3</sup>, by a minimum of 30% by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to recalculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for an investor seeking capital appreciation over a medium-to-long term horizon. The investor should be prepared to accept periods of market volatility and the risks of the stock market in pursuit of long-term goals.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X,Y	5.00%	1.50%	0.00%
B, C2, E	0.00%	1.50%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	0.78%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.60%	0.00%
M	2.00%	1.50%	0.80%
P	5.00%	0.57%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	0.90%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor or the Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
B	4%	3%	2%	1%	0%
C, C1	1%	0%	0%	0%	0%
C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

<sup>3</sup> Scope 1 emissions: are direct emissions from an issuer’s owned or controlled sources (such as emissions created directly by the issuer’s business processes or from vehicles owned by the issuer). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions: are all other indirect emissions that occur in an issuer’s value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**SFDR Annexes**

- 1. NEUBERGER BERMAN GLOBAL SUSTAINABLE EQUITY FUND**
- 2. NEUBERGER BERMAN EUROPEAN SUSTAINABLE EQUITY FUND**

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman Global Sustainable Equity Fund (the “Portfolio”)

**Legal entity identifier:** 549300XRT8BVEN8P0A74

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Manager uses the NB ESG Quotient and third party data to promote the environmental and social characteristics listed below. Pursuant to this, the Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net-zero goal, the Manager will promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient and third party data, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) and third party data are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. The Manager will engage with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Climate Value-at-Risk:

Climate Value-at-Risk (“CVaR”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the

<sup>1</sup> Scope 1 emissions: are direct emissions from a company’s owned or controlled sources (such as emissions created directly by the company’s business processes or from vehicles owned by the company). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions: are all other indirect emissions that occur in a company’s value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

### III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager will prohibit the initiation of new investment positions in securities issued by companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Neuberger Berman Sustainable Exclusion Policy and the Neuberger Berman Enhanced Sustainable Exclusion Policy are also applied when determining what investments to make for the Portfolio. The Portfolio will not invest in companies that derive more than 5% of their revenue from fur and specialty leather manufacturers, or military contractors. The Portfolio also excludes companies from the investment universe that are involved in controversial activities and behaviour, such as gambling, alcohol and nuclear power. In addition, the Portfolio excludes companies involved in dictatorial regimes/ high ESG controversies; companies that exhibit very poor behaviours in terms of environmental pollution, human rights' issues or governance controversies; and companies that are not transparent on ESG or score very poorly on ESG metrics overall. The application of the Enhanced Sustainable Exclusion Policy, as such terms are defined within the "Sustainable Investment Criteria" section of the Prospectus, also means that companies involved in tobacco, civilian firearms, private prisons and fossil fuels will also be excluded.

The Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

#### ● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold at least 50% sustainable investments which will aim to promote the environmental & social characteristics listed above and will aim to contribute to the Portfolio's net zero goal, as detailed below.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB's sustainable investment framework. This framework includes an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Manager utilises multiple datapoints that measure the alignment of a company's economic activity with environmental or social characteristics.

The Manager screens companies for controversies, significant harm and violations of minimum safeguards. If the companies pass this screen, the Manager then proceeds to measure the companies' environmental or social economic contribution.

The Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Sustainable investments are more likely to have product/service revenue aligned with the SDGs.

Both the sustainable and non-sustainable investments held by the Portfolio will target net zero alignment by 2050, however the sustainable investments portion of the Portfolio would be expected to contribute to reducing the Portfolio's carbon footprint.

While the sustainable investments may have a social or an environmental objective, the sustainable investments will not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "*How have the indicators for adverse impacts on sustainability factors been taken into account?*" below) and violations of minimum safeguards (with respect to which see "*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*" below).

The Manager also applies the ESG exclusion policies referenced above. The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

The Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Manager's subjective view) in respect of the sustainable investments of the Portfolio, and may evolve with improving data quality and availability. The Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

Additionally, the Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager;
- Stewardship and/or setting engagement objectives with companies which fall below the quantitative and qualitative tolerance thresholds set for a PAI; and

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Application of the NB ESG exclusion policies detailed above, which includes consideration of several of the PAIs.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio does not commit to holding Taxonomy aligned investments.

#### Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

Yes. The Manager considers PAIs with respect to the Portfolio in two ways:

1. All PAIs are considered when determining whether sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective as explained in “How have the indicators for adverse impacts on sustainability factors been taken into account?” above.
2. The Manager will consider the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promote environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

See “How have the indicators for adverse impacts on sustainability factors been taken into account?” above for more details on how the PAIs are considered with respect to sustainable investments.

With respect to the Product Level PAIs, the Manager utilises third party data and proxy data along with internal research to consider them.

Additionally, the Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;

- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

### What investment strategy does this financial product follow?

The Portfolio aims to achieve a minimum excess annualised return of 2% over the MSCI World Index (Total Return, Net of Tax, USD) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of global equity holdings that comply with the Sustainable Criteria. The Portfolio will seek to achieve its objective by investing primarily in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and industrial sectors. The Portfolio will invest primarily in equity securities issued by companies whose behaviours, processes and operations contribute to system-level progress towards environmental and social objectives, such as: access to healthcare, sustainable consumption (which is the use of products, energy and services so as to minimise the environmental impact of such use) and conscious consumers, access to information and the digital revolution, energy transition and industrial innovation, resource efficiency, human capital development, fintech and financial inclusion (which is the availability and equality of opportunities to access financial services).

In aiming to align the Portfolio with a net-zero goal, the Manager intends to have at least 90% of the Portfolio's Net Asset Value invested in companies with Science-Based Target initiative ("SBTi")<sup>2</sup> validated targets (or equivalent as assessed by Neuberger Berman's net-zero sector alignment methodology, which conforms with the Institutional Investors Group on Climate Change ("IIGCC") target setting guidance<sup>3</sup>) by 2030 and to reach 100% of the Portfolio's Net Asset Value by 2050. Additionally, the Portfolio must reduce its carbon footprint across scope 1, 2, and material scope 3 GHG emissions, by a minimum of 30% by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Further details on NB's commitment to the Net Zero Asset Managers Initiative are contained in the "Sustainable Investment Criteria" section of the Prospectus.

The Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced. The Manager adopts a value-chain approach to better understand sustainability issues. The value chain approach focuses on trends, innovations and the role of material ESG aspects in a variety of industries. The value-chain approach takes into account the NB ESG Quotient.

In addition, fundamental analysis aimed at assessing the company's financial performance is also considered such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

<sup>2</sup> The SBTi is a partnership between CDP, the United Nations Global Compact, World Resources Institute and the World Wide Fund for Nature which enables companies to set science-based emissions reduction targets.

<sup>3</sup> The IIGCC created the Net Zero Investment Framework to assist asset owners and asset managers to develop net zero investment strategies or to fulfil the requirements of net zero commitments. The IIGCC's target setting guidance is a component of the Net Zero Investment Framework.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

The Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Engagement:

The Manager engages directly with management teams of companies through a robust ESG engagement program. The Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Manager through an internal NB engagement tracker.

In addition, the Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Manager deems as weak ESG efforts, are being addressed adequately. The success of the Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Manager will reduce the investment universe by 20% through the application of ESG exclusions, as detailed above, and ESG analysis.

● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Manager aims to prioritise engagement that is expected, based on the Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding at least 50% sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The "Other" section in the Portfolio is held for a number of reasons that the Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Manager amends the minimum Taxonomy alignment of the Portfolio.

**Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>4</sup>**

Yes:

In fossil gas

In nuclear energy

No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>4</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A - the Portfolio does not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

While the Portfolio may invest in sustainable investments with an environmental objective, such sustainable investments may not be in Taxonomy-aligned investments as they may not satisfy the criteria for same.

**What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

● **How does the designated index differ from a relevant broad market index?**

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman European Sustainable Equity Fund (the “Portfolio”)  
**Legal entity identifier:** 549300K7Y3HBTEX71857

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<p><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b></p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b></p>
<p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective</b>: __%</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective</b>: __%</p>	<p><input checked="" type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, <b>it will have a minimum proportion of 50% of sustainable investments</b></p> <p style="margin-left: 20px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Manager uses the NB ESG Quotient and third party data to promote the environmental and social characteristics listed below. Pursuant to this, the Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in

clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net-zero goal, the Manager will promote the reduction of the Portfolio's carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient and third party data, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) and third party data are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. The Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their

---

<sup>1</sup> Scope 1 emissions: are direct emissions from a company's owned or controlled sources (such as emissions created directly by the company's business processes or from vehicles owned by the company). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions: are all other indirect emissions that occur in a company's value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

### III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Manager will prohibit the initiation of new investment positions in securities issued by companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards.

The Neuberger Berman Sustainable Exclusion Policy and the Neuberger Berman Enhanced Sustainable Exclusion Policy are also applied when determining what investments to make for the Portfolio.

The Portfolio will not invest in companies that derive more than 5% of their revenue from fur and specialty leather manufacturers, or military contractors. The Portfolio also excludes companies from the investment universe that are involved in controversial activities and behaviour, such as gambling, alcohol and nuclear power. In addition, the Portfolio excludes companies involved in dictatorial regimes/ high ESG controversies; companies that exhibit very poor behaviours in terms of environmental pollution; human rights' issues or governance controversies; and companies that are not transparent on ESG or score very poorly on ESG metrics overall. The application of the Enhanced Sustainable Exclusion Policy, as such terms are defined within the "*Sustainable Investment Criteria*" section of the Prospectus, also means that companies involved in tobacco, civilian firearms, private prisons and fossil fuels will also be excluded.

The Manager will track and report on the performance of the above sustainability indicators namely: (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

### ● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold at least 50% sustainable investments which will aim to promote the environmental & social characteristics listed above and will aim to contribute to the Portfolio's net zero goal, as detailed below.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB's sustainable investment framework. This framework includes an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Manager utilises multiple datapoints that measure the alignment of a company's economic activity with environmental or social characteristics.

The Manager screens companies for controversies, significant harm and violations of minimum safeguards. If the companies pass this screen, the Manager then proceeds to measure the companies' environmental or social economic contribution.

The Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Sustainable investments are more likely to have product/service revenue aligned with the SDGs.

Both the sustainable and non-sustainable investments held by the Portfolio will target net zero alignment by 2050, however the sustainable investments portion of the Portfolio would be expected to contribute to reducing the Portfolio's carbon footprint.

While the sustainable investments may have a social or an environmental objective, the sustainable investments will not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "*How have the indicators for adverse impacts on sustainability factors been taken into account?*" below) and violations of minimum safeguards (with respect to which see "*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*" below).

The Manager also applies the ESG exclusion policies referenced above.

The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

The Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "**PAIs**").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Manager's subjective view) in respect of the sustainable investments in the Portfolio, and may evolve with improving data quality and availability.

The Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

Additionally, the Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Manager;

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Stewardship and/or setting engagement objectives with companies which fall below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the NB ESG exclusion policies detailed above, which includes consideration of several of the PAIs.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

N/A – the Portfolio does not commit to holding Taxonomy aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

Yes. The Manager considers PAIs with respect to the Portfolio in two ways:

1. All PAIs are considered when determining whether sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective as explained in “How have the indicators for adverse impacts on sustainability factors been taken into account?” above.
2. The Manager will consider the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promote environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

See “How have the indicators for adverse impacts on sustainability factors been taken into account?” above for more details on how the PAIs are considered with respect to sustainable investments.

With respect to the Product Level PAIs, the Manager utilises third party data and proxy data along with internal research to consider them.

Additionally, the Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Manager’s subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Manager;

- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

### What investment strategy does this financial product follow?

The Portfolio aims to achieve a minimum excess annualised return of 2% over the MSCI Europe Index (Total Return, Net of Tax, EUR) before fees over a 3-5 year investment horizon from investing primarily in a portfolio of European equity holdings that comply with the Sustainable Criteria. The Portfolio will seek to achieve its objective by investing primarily in equity securities that are listed or traded on Recognised Markets in Europe (which may include Emerging Market Countries) and issued by companies across all market capitalisations and industrial sectors. The Portfolio will invest primarily in equity securities issued by companies whose behaviours, processes and operations contribute to system-level progress towards environmental and social objectives, such as: access to healthcare, sustainable consumption (which is the use of products, energy and services so as to minimise the environmental impact of such use) and conscious consumers, access to information and the digital revolution, energy transition and industrial innovation, resource efficiency, human capital development, fintech and financial inclusion (which is the availability and equality of opportunities to access financial services).

In aiming to align the Portfolio with a net-zero goal, the Manager intends to have at least 90% of the Portfolio's Net Asset Value invested in companies with Science-Based Target initiative ("SBTi")<sup>2</sup> validated targets (or equivalent as assessed by Neuberger Berman's net-zero sector alignment methodology, which conforms with the Institutional Investors Group on Climate Change ("IIGCC") target setting guidance<sup>3</sup>) by 2030 and to reach 100% of the Portfolio's Net Asset Value by 2050. Additionally, the Portfolio must reduce its carbon footprint across scope 1, 2, and material scope 3 GHG emissions, by a minimum of 30% by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Further details on NB's commitment to the Net Zero Asset Managers Initiative are contained in the "Sustainable Investment Criteria" section of the Prospectus.

The Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced. The Manager adopts a value-chain approach to better understand sustainability issues. The value chain approach focuses on trends, innovations and the role of material ESG aspects in a variety of industries. The value-chain approach takes into account the NB ESG Quotient.

In addition, fundamental analysis aimed at assessing the company's financial performance is also considered such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

<sup>2</sup> The SBTi is a partnership between CDP, the United Nations Global Compact, World Resources Institute and the World Wide Fund for Nature which enables companies to set science-based emissions reduction targets.

<sup>3</sup> The IIGCC created the Net Zero Investment Framework to assist asset owners and asset managers to develop net zero investment strategies or to fulfil the requirements of net zero commitments. The IIGCC's target setting guidance is a component of the Net Zero Investment Framework.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

The Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Engagement:

The Manager engages directly with management teams of companies through a robust ESG engagement program. The Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Manager through an internal NB engagement tracker.

In addition, the Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Manager deems as weak ESG efforts, are being addressed adequately. The success of the Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Manager will reduce the investment universe by 20% through the application of ESG exclusions, as detailed above, and ESG analysis.

● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Manager aims to prioritise engagement that is expected, based on the Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding at least 50% sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The "Other" section in the Portfolio is held for a number of reasons that the Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>4</sup>**

- Yes:
  - In fossil gas       In nuclear energy
- No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>4</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A - the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

While the Portfolio may invest in sustainable investments with an environmental objective, such sustainable investments may not be in Taxonomy-aligned investments as they may not satisfy the criteria for same.

**What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

● **How does the designated index differ from a relevant broad market index?**

N/A

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## THEMATIC EQUITY SUPPLEMENT

### 6 DECEMBER 2023

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-funds, each of which is a separate portfolio of the Company:

**NEUBERGER BERMAN GLOBAL EQUITY MEGATRENDS FUND**

**NEUBERGER BERMAN NEXT GENERATION MOBILITY FUND**

**NEUBERGER BERMAN 5G CONNECTIVITY FUND**

**NEUBERGER BERMAN INNOVASIA 5G FUND**

**NEUBERGER BERMAN NEXT GENERATION SPACE ECONOMY FUND**

(the “Portfolios”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to the Portfolios, this Supplement shall prevail. Each SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the relevant Portfolio in accordance with SFDR. Each SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of an SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR for a Portfolio, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	with respect to each Portfolio (except for the Neuberger Berman InnovAsia 5G Fund), a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business; and  with respect to the Neuberger Berman InnovAsia 5G Fund, a day (except Saturday or Sunday) on which the relevant financial markets in London, New York and Hong Kong are open for business provided that, if on any such day, the period during which banks in Hong Kong are open for normal trading is reduced as a result of a tropical cyclone warning signal (number 8 or higher), a black rainstorm warning signal or other similar event, such day shall not be a Business Day unless the Directors otherwise determine;
<b>ChinaClear</b>	China Securities Depository and Clearing Corporation Limited;
<b>CSRC</b>	the China Securities Regulatory Commission of the PRC, the government agency responsible for matters relating to securities regulation;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in each Portfolio;
<b>Dealing Deadline</b>	with respect to each Portfolio (except for the Neuberger Berman InnovAsia 5G Fund), 3.00 pm (Irish time) on the relevant Dealing Day in respect of each Portfolio. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day;  with respect to the Neuberger Berman InnovAsia 5G Fund, 3.00 pm (Irish time) on the Business Day before the relevant Dealing Day. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the Business Day before the relevant Dealing Day;
<b>HKSCC</b>	Hong Kong Securities Clearing Company Limited;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of a Portfolio;
<b>Portfolios</b>	the Neuberger Berman Global Equity Megatrends Fund, the Neuberger Berman Next Generation Mobility Fund, the Neuberger Berman 5G Connectivity Fund, the Neuberger Berman InnovAsia 5G Fund and the Neuberger Berman Next Generation Space Economy Fund;
<b>SFDR Annex</b>	each annex hereof setting out the pre-contractual disclosures template with respect to a Portfolio, prepared in accordance with the requirements of Article 8 of SFDR;
<b>Shanghai Stock Connect</b>	the Shanghai-Hong Kong Stock Connect program;
<b>Shenzhen Stock Connect</b>	the Shenzhen-Hong Kong Stock Connect program;
<b>Stock Connect</b>	either or both of the Shanghai Stock Connect and the Shenzhen Stock Connect;
<b>SEHK</b>	the Stock Exchange of Hong Kong;
<b>SSE</b>	the Shanghai Stock Exchange;
<b>SZSE</b>	the Shenzhen Stock Exchange; and

- Sub-Investment Manager**
- (a) with respect to the Neuberger Berman Global Equity Megatrends Fund and the Neuberger Berman Next Generation Space Economy Fund, Neuberger Berman Europe Limited and Neuberger Berman Investment Advisers LLC or such other company as may be appointed by the Manager from time to time in respect of any particular Portfolio, with the prior approval of the Company and the Central Bank; and
  - (b) with respect to the Neuberger Berman Next Generation Mobility Fund, the Neuberger Berman 5G Connectivity Fund and the Neuberger Berman InnovAsia 5G Fund, Neuberger Berman Europe Limited, Neuberger Berman Investment Advisers LLC and Neuberger Berman Asia Limited or such other company as may be appointed by the Manager from time to time in respect of the Portfolio, with the prior approval of the Company and the Central Bank.

**Investment Risks**

Investment in the Portfolios carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of the information specific to each Portfolio, as included in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolios will achieve their respective objectives. While there are some risks described below that may be common to a number or all of the Portfolios, there may also be specific risk considerations which apply only to particular Portfolios.

### Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolios shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter;
- each of the other Distributing Classes of the Neuberger Berman Global Equity Megatrends Fund shall be declared on a quarterly basis and paid within 30 Business Days thereafter in relation to the Net Income of the Distributing Classes for the previous quarter; and
- each of the other Distributing Classes in the other Portfolios shall be declared on an annual basis and paid within 30 Business Days thereafter in relation to the Net Income of the Distributing Classes for the calendar year ended the previous 31 December.

### Subscriptions and Redemptions

Subscriptions for Shares in all Classes of each Portfolio which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

The Initial Offer Price for each of the Classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched, from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolios will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

### Neuberger Berman Global Equity Megatrends Fund

**Investors should note that the Portfolio may achieve its investment objective by investing in financial derivative instruments as described below. The Portfolio will not use FDI extensively or primarily for investment purposes.**

<b>Investment Objective</b>	The Portfolio seeks to achieve long-term capital appreciation through investment in a portfolio of equity holdings that are exposed to global long-term themes.
<b>Investment Approach</b>	<p>The Portfolio will seek to achieve its objective by investing primarily in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and industrial sectors.</p> <p>In seeking to achieve the Portfolio's investment objective, the Sub-Investment Manager pursues the following investment process which are described in further detail below:</p> <ul style="list-style-type: none"> <li>• Identifies secular themes (i.e. broad changes and trends affecting societies, economies and industries) that have the potential for long-term influence (e.g. the rising value of water).</li> <li>• Undertakes qualitative business analysis to identify companies which operate within those identified themes: Conducts in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success.</li> <li>• Undertakes quantitative screening: Screens for stocks that it believes have the potential for high return on equity and cash flow strength that stand to benefit from a particular theme.</li> <li>• Transaction Discipline: Seeks companies that it believes have 50% - 100% capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.</li> </ul> <p>The Sub-Investment Manager conducts fundamental research to seek to identify multiple globally applicable long-term themes that result from secular shifts based on factors such as demographic, technological, environmental and societal changes. The themes identified by the Sub-Investment Manager are expected to typically have a minimum time horizon of 7-10 years.</p> <p>After creating a universe of companies that it determines offer exposure to a specific theme, the Sub-Investment Manager evaluates those companies seeking to identify companies who are leaders in their industries. The Sub-Investment Manager believes that companies who are leaders in their industries are identified through the quality of their product, technology, processes and market access. The Sub-Investment Manager will review the financial position and results of the companies. In-person management meetings are then conducted with members of senior management of the relevant companies to assess business metrics and quality of management team.</p> <p>The Portfolio seeks to adopt a high conviction approach, which is expected to result in a concentrated portfolio of 20-30 stocks.</p> <p>The Portfolio seeks to reduce risk by diversifying among many industries within the countries and economic sectors. Although, it has the flexibility to invest a significant portion of its assets in one country or region, it generally intends to remain diversified across countries and geographical regions.</p> <p>The Portfolio may invest directly in China A Shares through Stock Connect and through the qualified foreign investors ("QFI") regime, as described below, and in the China B Shares market.</p> <p>The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of</p>

	<p>the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.</p>
<b>Benchmark</b>	<p>The MSCI World Index (Total Return, Net of Tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed markets.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>
<b>Base Currency</b>	US Dollars (USD).
<b>Instruments / Asset Classes</b>	<p>The Portfolio can invest in or be exposed to the following types of assets.</p> <p><b>Equity and Equity-linked Securities.</b> These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock and American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution.</p> <p><b>ETFs.</b> ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index, in this case global equity markets. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.</p> <p><b>Equity Real Estate Investment Trusts ("REITs").</b> REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located in globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.</p> <p><b>Participatory Notes ("P-Notes")</b> which are securities issued by banks or broker-dealers that are designed to replicate the performance of certain issuers and markets by giving exposure to the performance of specific stocks that the Portfolio may not be able to invest in directly because of local holding restrictions affecting such stocks in the jurisdiction of their issue. The Portfolio shall only invest in listed P-Notes.</p> <p><b>Financial Derivative Instruments ("FDIs")</b> subject to the conditions and limits imposed by the Central Bank as set out in this Supplement, the Portfolio may use FDI, including warrants (including equity warrants), equity rights, convertible bonds and convertible preferred stock and single stock options which may be used for investment purposes in pursuing the investment objective, efficient portfolio management or to hedge. Convertible bonds enable the holder to convert their investment in the bonds into the issuer's common stock at a pre-agreed price and convertible preferred stock enable the holder to convert their investment in the preferred stock into the issuer's common stock at a pre-agreed rate. Forward currency contracts and currency futures may be used in order to hedge currency risk. UCITS eligible indices options may be used to hedge or efficiently manage some portions or all of the Portfolio. Such FDI may provide exposure to any or all of the asset classes listed above.</p> <p><b>Collective Investment Schemes.</b> The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% in other collective investment schemes (including ETFs which are structured as collective investment schemes) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by Sub-Investment Manager or its affiliates and will comply with the</p>

requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**Fixed Income Securities (Debt Securities).** The Portfolio may invest in debt instruments issued by corporate or government issuers, which may be rated or unrated (although not more than 30% of NAV will be invested in debt instruments which are rated below investment grade) and may have fixed or floating interest rates.

**Repo Contracts.** The Portfolio may use Repo Contracts subject to the conditions and limits set out in the Prospectus.

## Stock Connect

The China Securities Regulatory Commission and the Securities and Futures Commission of Hong Kong have an approved program which establishes mutual stock markets access between the PRC and Hong Kong, namely Stock Connect. The Sub-Investment Manager may pursue the Portfolio's investment objective by investing directly in certain eligible China A Shares via Stock Connect.

The Shanghai Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SSE. The Shenzhen Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SZSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SZSE.

Each of the Shanghai Stock Connect and Shenzhen Stock Connect comprises a Northbound Trading Link and a Southbound Trading Link. Under the Northbound Trading Link, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions), through their Hong Kong brokers and a securities trading service company established by the SEHK, may trade Eligible Securities listed on the SSE and the SZSE by routing orders to the SSE and the SZSE respectively.

### Eligible Securities

Among the different types of SSE-or SZSE-listed securities, only China A Shares and ETFs are currently permitted for Northbound trading under Stock Connect.

Currently, Hong Kong and overseas investors are able to trade certain SSE Securities. Eligible Securities under the Northbound Trading Link of the Shanghai Stock Connect include all the constituent stocks from time to time of the SSE 180 Index and SSE 380 Index, and all the SSE-listed China A Shares that are not included as constituent stocks of the relevant indices but which have corresponding China H Shares listed on the SEHK, except the following:

- SSE-listed shares which are not traded in CNY; and
- SSE-listed shares which are included in the "risk alert board".

Eligible Securities under the Northbound Trading Link of the Shenzhen Stock Connect include any constituent stock of the SZSE Component Index and the SZSE Small/Mid Cap Innovation Index which has a market capitalisation of CNY6 billion or above and all SZSE-listed shares of companies which have issued both China A Shares and China H Shares, except the following:

- SZSE-listed shares which are not traded in CNY; and
- SZSE-listed shares which are included in the "risk alert board" or under delisting arrangement.

In addition, Hong Kong and overseas investors are able to trade eligible SSE-listed and SZSE-listed ETFs that satisfy the relevant criteria at a regular review and are accepted as eligible ETFs for Northbound trading under Stock Connect. Regular reviews will be performed to determine the eligible ETFs for Northbound trading every six months.

It is expected that the list of Eligible Securities will be subject to review and may change from time to time.

If an Eligible Security ceases to be classified as such, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions) will only be allowed to sell holdings of such Eligible Security but will be restricted from buying any more of such Eligible Security.

#### Trading day

Investors (including the Portfolio, subject to its investment approach and restrictions) are only allowed to trade through Stock Connect on days on which both markets are open for trading, and banking services are available in both markets on the corresponding settlement days.

#### Trading quota

Trading under Stock Connect is subject to the Daily Quota. Northbound trading through each Stock Connect is subject to a separate set of Daily Quota. The Daily Quota limits the maximum net buy value of cross-boundary trades under each Stock Connect per day. The SEHK will monitor the quota and publish the remaining balance of the Northbound Daily Quota at scheduled times on the SEHK's website. The Daily Quota may change from time to time without prior notice and investors should refer to the SEHK's website and other information published by the SEHK for up-to-date information.

#### Settlement and custody

The HKSCC will be responsible for the clearing, settlement and the provision of depository, nominee and other related services of the trades executed by Hong Kong market participants and investors.

The Eligible Securities traded through Stock Connect are issued in scripless form, so investors do not hold any physical securities. Hong Kong and overseas investors who have acquired Eligible Securities through Northbound trading should maintain the Eligible Securities with their brokers' or custodians' stock accounts with CCASS, operated by HKSCC.

#### Corporate actions and shareholders' meetings

Notwithstanding the fact that the HKSCC does not claim proprietary interests in the Eligible Securities held in its omnibus stock account in ChinaClear, ChinaClear as the share registrar for the Eligible Securities will still treat HKSCC as one of the shareholders when it handles corporate actions in respect of such Eligible Securities.

HKSCC monitors the corporate actions affecting Eligible Securities and keeps the relevant brokers or custodians participating in CCASS ("CCASS participants") informed of all such corporate actions that require CCASS participants to take steps in order to participate in them.

SSE and SZSE-listed companies usually announce their annual general meeting / extraordinary general meeting information about one month before the meeting date. A poll is called on all resolutions for all votes. HKSCC will advise CCASS participants of all general meeting details such as meeting date, time, venue and the number of resolutions.

#### Foreign shareholding restrictions

The CSRC stipulates that, when holding China A Shares through Stock Connect, Hong Kong and overseas investors are subject to the following shareholding restrictions:

- Single foreign investors' shareholding by any Hong Kong or overseas investor in a China A Share must not exceed 10% of the total issued shares; and
- Aggregate foreign investors' shareholding by all Hong Kong and overseas investors in a China A Share must not exceed 30% of the total issue shares.

Should the shareholding of a single investor in a China A Share listed company exceed the above restriction, the investor would be required to unwind his position on the excessive shareholding according to a last-in-first-out basis within a specific period. The SSE, the SZSE and the SEHK will issue warnings or restrict the buy orders for the related China A Shares if the percentage of total shareholding is approaching the upper limit.

SSE and SZSE-listed ETFs are not subject to the aforementioned shareholding restrictions.

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities, subject to its investment approach and restrictions.

#### Trading fees and taxes

In addition to paying trading fees and stamp duties in connection with trading of Eligible Securities, the Portfolio may be subject to other fees and taxes concerned with income arising from transfers of stocks or ETFs (if applicable) which are determined by the relevant authorities.

Further information about Stock Connect is available online at the website:

[https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc\\_lang=en](https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc_lang=en)

### **Qualified Foreign Institutional Investors**

The qualified foreign institutional investor program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access to the SSE and SZSE. Under this program, licensed investors can buy and sell CNY-denominated China A Shares, subject to specified quotas that determine the amount of money that the licensed foreign investors are permitted to invest in China's capital markets.

Neuberger Berman Europe Limited received its QFI licence on 3 May 2012.

#### Eligible Securities

QFI permitted securities include CNY financial instruments in which QFI are allowed to invest from time to time and which may include (1) stocks, depository receipts, bonds, bond repurchases, and asset-backed securities traded or transferred on stock exchanges; (2) shares and other types of securities transferred on the National Equities Exchange and Quotations (NEEQ); (3) products and derivatives on bonds, interest rates and foreign exchange traded on the domestic inter-bank bond market which are deemed by PBOC as eligible for QFI; (4) investment funds; and (5) other financial instruments as approved by the CSRC.

#### Trading day

Investors (including the Portfolio) are only allowed to trade through the QFI regime on days on which the relevant PRC markets are open for trading, and banking services are available on the corresponding settlement days.

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities.

#### QFI status

Neuberger Berman Europe Limited has obtained QFI status. However, under the relevant investment regulations, the QFI status of Neuberger Berman Europe Limited could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFI status of the Sub-Investment Manager is suspended or revoked, the Portfolio may be required to dispose of its securities held through the QFI and may not be able to access the Chinese securities market via the QFI as contemplated in this Supplement, which may have an adverse effect on the Portfolio's performance.

Moreover, the relevant investment regulations generally apply at the QFI level and not simply to investments made on behalf of the Portfolio. Thus investors should be aware that violations of the relevant investment regulations arising out of activities through the QFI other than those conducted by the Portfolio could result in the revocation of or other

regulatory action in respect of the QFI as a whole. The regulations relating to the investment restrictions in China A Shares are also generally applied at the QFI level (as discussed in detail below), and the Portfolio may also be impacted by the actions of other investors utilising the QFI status. Hence the ability of the Portfolio to make investments utilising the QFI status of Neuberger Berman Europe Limited may be affected adversely by the investments of other investors utilising the QFI status of Neuberger Berman Europe Limited.

#### Custody

China A Shares traded on the Exchanges are dealt and held in dematerialised form through ChinaClear. Exchange-traded securities purchased on behalf of the Portfolio through the QFI are required to be recorded by ChinaClear as credited to a securities trading account maintained in the joint names of the QFI and the Company (or such other account name as required by the relevant investment regulations which may reference also the Portfolio).

The Company/the QFI expects to receive a legal opinion from a qualified PRC law firm confirming that, as a matter of PRC law, the QFI will have no ownership interest in the securities and that the Portfolio will ultimately and exclusively be entitled to ownership of the securities.

However, given that, pursuant to the relevant investment regulations, the QFI as account-holder will be the party entitled to the securities (albeit that this entitlement does not constitute an ownership interest or preclude the QFI purchasing securities on behalf of the Portfolio), the assets of the Portfolio may not be as well protected as they would be if it were possible for them to be registered and held solely in the name of the Company (or the Portfolio). In particular, given that the QFI belongs to the Neuberger Berman group, there is a risk that creditors of the Neuberger Berman group may incorrectly assume, contrary to the legal opinion referred to, that the Portfolio's assets belong to the Neuberger Berman group and such creditors may seek to gain control of the Portfolio's assets in lieu of such liabilities.

The evidence of title of exchange-traded securities in the PRC consists only of electronic book-entries in the depository and/or registry associated with the relevant Exchange. These arrangements of the depositories and registries are new and not fully tested in regard to their efficiency, accuracy and security.

In order to prevent any trading failure, ChinaClear will automatically settle any trades executed by the PRC securities trading house relating to the securities trading account maintained in the joint names of the Company (or the Portfolio) and the QFI. Accordingly all instructions issued by the PRC securities trading house relating to the securities trading account will be executed without the need of consent or direction of the Depository.

#### Investment restrictions

Investments in the PRC securities market via the QFI are subject to compliance with certain investment restrictions imposed by the relevant investment regulations including the following, which apply to each foreign investor (including the Portfolio) investing through the QFI and will affect the Portfolio's ability to invest in A Shares and carry out their investment objectives:

- (i) shares held by each underlying foreign investor (such as the Portfolio) which invests (through QFI or other permissible channels) in one PRC listed company should not exceed 10% of the total shares of such company; and
- (ii) aggregate A Shares held by all underlying foreign investors (such as the Portfolio and all other foreign investors) which invest (through QFI or other permissible channels) in one PRC listed company should not exceed 30% of the total shares of such company.

Although it has not been explicitly provided under the relevant investment regulations, in practice, the 10% single foreign shareholding restriction is also applied at the QFI level, under which a QFI may not hold 10% or more shares of any listed company, regardless of the fact that such QFI is holding such shares for a number of different clients. Accordingly, as the QFI status of Neuberger Berman Europe Limited is utilised by the Portfolio and other investors as well, the capability of the Portfolio to invest in the shares of certain listed company may be limited due to the investments in the shares of such

listed company by other investors who also invest through the QFI status of Neuberger Berman Europe Limited. Specifically, when the shareholding of such other investors in a PRC listed company reaches 10%, the Portfolio may not be able to buy any such shares, even if the then effective price of such shares is advantageous to the Portfolio.

Similarly, since the 30% aggregate foreign shareholding restriction is monitored at the level of all foreign investors, the capability of the Portfolio to invest in A Shares of certain listed company may also be limited due to the investments made by other foreign investors.

#### Disclosure to CSRC

In practice, structured products issued by QFI to give foreign investors access to A Shares are required to be reported to CSRC. The information reported may include information on the Portfolio as applicable.

#### Disclosure to the Exchange

According to the relevant investment regulations, where the SSE or the SZSE spots any abnormal trading which may affect the normal trading order, it may request the involved QFI to promptly report the securities transaction and shareholding information of the QFI's relevant underlying investors, which may include information on the Portfolio.

### **Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the "*Investment Restrictions*" section of the Prospectus and the UCITS Regulations.
- The Portfolio may invest up to 20% of its Net Asset Value in China A Shares and China B Shares.
- It is the intention of the Sub-Investment Manager to invest a maximum of 20% of the Portfolio's Net Asset Value in Emerging Market Countries.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

### **Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the "*Investment Risks*" section of the Prospectus. Investors should read and consider the entire "*Investment Risks*" section of the Prospectus, the risks summarised in the following section, namely "*Concentration Risk*", which is contained within the "*Market Risks*" section, are particularly relevant to the Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Sub-Investment Manager may use future foreign currency exchange contracts in order to hedge some currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

### **Environmental, Social and Governance ("ESG")**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager assesses companies in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

Please also refer to Annex VI of the Prospectus which contains additional information on

sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors seeking capital appreciation opportunities through equity investments in global securities exposed to long-term investment themes. Investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept periods of market volatility particularly over short time periods. Investors are likely to have a medium to long-term investment horizon.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, Y	5.00%	1.70%	0.00%
X	5.00%	0.85%	1.00%
B, C2, E	0.00%	1.53%	1.00%
C1	0.00%	1.70%	1.00%
C	0.00%	1.11%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.85%	0.00%
M	2.00%	1.70%	0.80%
P	5.00%	0.81%	0.00%
T	5.00%	1.53%	0.00%
U	3.00%	1.28%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
B	4%	3%	2%	1%	0%
C, C1	1%	0%	0%	0%	0%
C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

Notwithstanding the information set out under the “Classes” section within “Annex II – Share Class Information” to the Prospectus, please note that, subject to any transitional period or other arrangement agreed with Shareholders in the relevant Classes, Shares in the Category B, C2 and E Classes will automatically convert into Shares in the corresponding T Class, at no additional cost to holders of such Shares, upon the expiry of four years (Category B Classes), two years (Category C2 Classes) and three years (Category E Classes) from the date of the initial subscription into the relevant B, C2 or E Class.

### Neuberger Berman Next Generation Mobility Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing in financial derivative instruments as described below. The Portfolio will not use FDI extensively or primarily for investment purposes. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

<b>Investment Objective</b>	The Portfolio seeks to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings, focusing on companies that are involved or derive benefit from Next Generation Mobility.
<b>Investment Approach</b>	<p>The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.</p> <p>In seeking to achieve the Portfolio's investment objective, the Sub-Investment Manager pursues the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to Next Generation Mobility:</p> <ul style="list-style-type: none"> <li>• Qualitative business analysis: to identify companies which operate within the long-term trend of the proliferation of autonomous, electric and connected vehicles ("Next Generation Mobility"), as well as companies that are well-positioned to benefit from the new business models related to Next Generation Mobility;</li> <li>• Quantitative screening: to identify stocks that it believes may be too illiquid or have too small a market capitalisation;</li> <li>• Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success; and</li> <li>• Security selection and portfolio construction: Selects companies with the ability to provide solutions to drive Next Generation Mobility that it believes have 50% - 100% capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.</li> </ul> <p>Using this universe, the Sub-Investment Manager further evaluates those companies, seeking to identify companies who are leaders in their industries. The Sub-Investment Manager believes that companies who are leaders in their industries are identified through the quality of their product, technology, processes and market access. The Sub-Investment Manager will review the financial position and results of the companies. In-person management meetings, where possible, are then conducted with members of senior management of the relevant companies to assess financial and operating metrics (e.g. sales growth and product offering) and the quality of the company's management team.</p> <p>The fundamental research seeks to identify companies with the following characteristics:</p> <ul style="list-style-type: none"> <li>• Stock prices which are undervalued relative to long-term cash flow growth potential;</li> <li>• Industry leadership companies with high market share, pricing power, or better technology/business models relative to peers, or new entrants gaining market share;</li> <li>• Potential for significant improvement in the company's business (e.g. top line growth greater than market/peers, margin expansion, and/or increased cash flow generation);</li> <li>• Strong financial characteristics, including growth, margins, and/or capital returns and historic valuations on metrics such as price to cash flow, price to earnings or price to</li> </ul>

book value; and

- Proven management track record.

The Portfolio seeks to reduce risk by diversifying across countries and economic sectors. Although, it has the flexibility to invest a significant portion of its assets in one country or region, it generally intends to remain diversified across countries and geographical regions.

The Portfolio may invest directly in China A Shares through Stock Connect, as described below.

The Portfolio may also invest in debt instruments and money market instruments on an ancillary basis.

Investors should note that this Portfolio seeks to apply the Sustainable Exclusion Policy that has been adopted by the Sub-Investment Manager along with the application of the exclusions set out in the Enhanced Sustainable Exclusion Policy, as such terms are defined within the “*Sustainable Investment Criteria*” section of the Prospectus. Investors should refer to the information contained in that section and the SFDR Annex for further details about the application of both the Sustainable Exclusion Policy and Enhanced Sustainable Exclusion Policy to the Portfolio.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

---

#### Benchmark

The MSCI All-Country World Index (ACWI) (Total Return, Net of Tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed and emerging markets.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

#### Base Currency

US Dollars (USD).

---

#### Instruments / Asset Classes

The Portfolio can invest in or be exposed to the following types of assets.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock, American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution and, subject to a limit of 10% of the Portfolio's Net Asset Value, recently issued securities of the types described above, which are unlisted but have been issued with an undertaking to apply for admission to listing on a Recognised Market within a year of issue.

**Equity Real Estate Investment Trusts (“REITs”).** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located in globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales. Exposure to REITs may also arise when the Sub-Investment Manager identifies opportunities in such securities which are linked / support the evolution of Next Generation Mobility (such as data centre REITs).

**Participatory Notes (“P-Notes”).** P-Notes are securities issued by banks or broker-dealers that are designed to replicate the performance of issuers and markets (in which the Portfolio can invest directly) by giving exposure to the performance of specific stocks that the Portfolio may not be able to invest in directly because of local holding restrictions affecting such stocks in the jurisdiction of their issue. The Portfolio shall only invest in

---

---

listed P-Notes for India.

**Financial Derivative Instruments (“FDI”).** FDI will be used for investment, hedging and/or efficient portfolio management and subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement:

- Warrants and rights may be used to take exposure to equity securities of the type described above.
- Single stock options may be used to take exposure to equity securities of the type described above and UCITS eligible equity index options may be used to hedge or efficiently manage some portions or all of the Portfolio
- Convertible Bonds and Convertible Preferred Stock. Convertible bonds enable the holder to convert their investment in the bonds into the issuer’s common stock at a pre-agreed price and convertible preferred stock enable the holder to convert their investment in the preferred stock into the issuer’s common stock at a pre-agreed rate.
- Forward currency contracts may be used to hedge currency risk.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to achieve a rate of return greater than the market. The indices utilised for hedging or efficient portfolio management purposes will be broad-based, UCITS-eligible indices which provide exposure to the performance of equities and details of such indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes (including ETFs which are structured as collective investment schemes) which are themselves exposed to investments that are similar to the Portfolio’s other investments, provided that the Portfolio may not invest more than 10% of its Net Asset Value in other collective investment schemes which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and/or the Sub-Investment Manager or its affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank’s rules, which may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged (i) in excess of 200% of their net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**ETFs.** ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio’s other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Fixed Income Securities (Debt Securities).** The Portfolio may invest in debt instruments, such as bonds and notes, issued by corporate or government issuers, which may be rated or unrated (although not more than 10% of NAV will be invested in debt instruments which are rated below investment grade) and may have fixed or floating interest rates and will not embed derivatives.

---

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under “Collective Investment Schemes” above, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as “junk bonds”.

**Repo Contracts.** The Portfolio may use Repo Contracts subject to the conditions and limits set out in the Prospectus.

### Stock Connect

The China Securities Regulatory Commission and the Securities and Futures Commission of Hong Kong have an approved program which establishes mutual stock markets access between the PRC and Hong Kong, namely Stock Connect. The Sub-Investment Manager may pursue the Portfolio’s investment objective by investing up to 30% of the Portfolio’s Net Asset Value directly in certain eligible China A Shares via Stock Connect.

The Shanghai Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SSE. The Shenzhen Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SZSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SZSE.

Each of the Shanghai Stock Connect and Shenzhen Stock Connect comprises a Northbound Trading Link and a Southbound Trading Link. Under the Northbound Trading Link, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions), through their Hong Kong brokers and a securities trading service company established by the SEHK, may trade Eligible Securities listed on the SSE and the SZSE by routing orders to the SSE and the SZSE respectively.

#### Eligible Securities

Among the different types of SSE-or SZSE-listed securities, only China A Shares and ETFs are currently permitted for Northbound trading under Stock Connect.

Currently, Hong Kong and overseas investors are able to trade certain SSE Securities. Eligible Securities under the Northbound Trading Link of the Shanghai Stock Connect include all the constituent stocks from time to time of the SSE 180 Index and SSE 380 Index, and all the SSE-listed China A Shares that are not included as constituent stocks of the relevant indices but which have corresponding China H Shares listed on the SEHK, except the following:

- SSE-listed shares which are not traded in CNY; and
- SSE-listed shares which are included in the “risk alert board”.

Eligible Securities under the Northbound Trading Link of the Shenzhen Stock Connect include any constituent stock of the SZSE Component Index and the SZSE Small/Mid Cap Innovation Index which has a market capitalisation of CNY6 billion or above and all SZSE-listed shares of companies which have issued both China A Shares and China H Shares, except the following:

- SZSE-listed shares which are not traded in CNY; and
- SZSE-listed shares which are included in the “risk alert board” or under delisting arrangement.

In addition, Hong Kong and overseas investors are able to trade eligible SSE-listed and SZSE-listed ETFs that satisfy the relevant criteria at a regular review and are accepted as eligible ETFs for Northbound trading under Stock Connect. Regular reviews will be performed to determine the eligible ETFs for Northbound trading every six months.

---

It is expected that the list of Eligible Securities will be subject to review and may change from time to time.

If an Eligible Security ceases to be classified as such, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions) will only be allowed to sell holdings of such Eligible Security but will be restricted from buying any more of such Eligible Security.

#### Trading day

Investors (including the Portfolio, subject to its investment approach and restrictions) are only allowed to trade through Stock Connect on days on which both markets are open for trading, and banking services are available in both markets on the corresponding settlement days.

#### Trading quota

Trading under Stock Connect is subject to the Daily Quota. Northbound trading through each Stock Connect is subject to a separate set of Daily Quota. The Daily Quota limits the maximum net buy value of cross-boundary trades under each Stock Connect per day. The SEHK will monitor the quota and publish the remaining balance of the Northbound Daily Quota at scheduled times on the SEHK's website. The Daily Quota may change from time to time without prior notice and investors should refer to the SEHK's website and other information published by the SEHK for up-to-date information.

#### Settlement and custody

The HKSCC will be responsible for the clearing, settlement and the provision of depository, nominee and other related services of the trades executed by Hong Kong market participants and investors.

The Eligible Securities traded through Stock Connect are issued in scripless form, so investors do not hold any physical securities. Hong Kong and overseas investors who have acquired Eligible Securities through Northbound trading should maintain the Eligible Securities with their brokers' or custodians' stock accounts with CCASS, operated by HKSCC.

#### Corporate actions and shareholders' meetings

Notwithstanding the fact that the HKSCC does not claim proprietary interests in the Eligible Securities held in its omnibus stock account in ChinaClear, ChinaClear as the share registrar for the Eligible Securities will still treat HKSCC as one of the shareholders when it handles corporate actions in respect of such Eligible Securities.

HKSCC monitors the corporate actions affecting Eligible Securities and keeps the relevant brokers or custodians participating in CCASS ("CCASS participants") informed of all such corporate actions that require CCASS participants to take steps in order to participate in them.

SSE and SZSE-listed companies usually announce their annual general meeting / extraordinary general meeting information about one month before the meeting date. A poll is called on all resolutions for all votes. HKSCC will advise CCASS participants of all general meeting details such as meeting date, time, venue and the number of resolutions.

#### Foreign shareholding restrictions

The CSRC stipulates that, when holding China A Shares through Stock Connect, Hong Kong and overseas investors are subject to the following shareholding restrictions:

- Single foreign investors' shareholding by any Hong Kong or overseas investor in a China A Share must not exceed 10% of the total issued shares; and
- Aggregate foreign investors' shareholding by all Hong Kong and overseas investors in a China A Share must not exceed 30% of the total issue shares.

Should the shareholding of a single investor in a China A Share listed company exceed the above restriction, the investor would be required to unwind his position on the excessive shareholding according to a last-in-first-out basis within a specific period. The SSE, the SZSE and the SEHK will issue warnings or restrict the buy orders for the related China A Shares if the percentage of total shareholding is approaching the upper limit.

---

SSE and SZSE-listed ETFs are not subject to the aforementioned shareholding restrictions.

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities, subject to its investment approach and restrictions.

#### Trading fees and taxes

In addition to paying trading fees and stamp duties in connection with trading of Eligible Securities, the Portfolio may be subject to other fees and taxes concerned with income arising from transfers of stocks or ETFs (if applicable) which are determined by the relevant authorities.

Further information about Stock Connect is available online at the website:

[https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc\\_lang=en](https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc_lang=en)

### **Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the “*Investment Restrictions*” section of the Prospectus and the UCITS Regulations.
- The Portfolio may invest up to 30% of its Net Asset Value in China A Shares.
- It is the intention of the Sub-Investment Manager to invest a maximum of 50% of the Portfolio’s Net Asset Value in Emerging Market Countries.
- The Portfolio may invest up to 10% of its Net Asset Value in REITs.
- The Portfolio may invest up to 10% of its Net Asset Value in recently issued securities.
- The Portfolio may not invest greater than 5% of its Net Asset Value in securities traded on Russian markets. Investment will only be made in securities that are listed/traded on the Moscow exchange.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

### **Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. In particular, investors should note that investments in companies which operate within the long-term trend of the proliferation of next generation mobility are likely to be affected by regulatory, environment concerns, world-wide rapid technological developments, taxation and, price and supply changes. The products or services of companies that offer exposure to next generation mobility may rapidly fall into obsolescence (or may be dependent on technologies which rapidly fall into obsolescence) and so the value of the securities of these companies may be negatively impacted as a result. In other words, the Portfolio may be subject to greater volatilities due to its novel and untested nature. In addition, there may not always be appropriate investment opportunities in this sector for the Portfolio, which may impact on the ability of the Portfolio to fully deploy its assets in this sector. Companies that offer exposure to next generation mobility are heavily dependent on patent and intellectual property rights and/or licences, the loss or impairment of which may adversely affect profitability. Companies in this sector may face dramatic and often unpredictable changes in growth rates and competition among the companies themselves. In addition, these companies are subject to cyber security risks which may cause issues including system breakdown, suspension of offering of products or services and result in undesirable legal, financial, operational and reputational consequences. All of these may have an adverse impact on the value of the Portfolio’s investments in such companies. Investments in next generation mobility may not achieve the desired results under all circumstances and market conditions. Investors should read and consider the entire “*Investment Risks*” section of the Prospectus, in particular the risks identified in the “*Investment Risks*” section of this Supplement which are relevant to the Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the

use of FDI contained in the RMP Statement.

- The Sub-Investment Manager may use future foreign currency exchange contracts in order to hedge some currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

#### Environmental, Social and Governance ("ESG")

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

The Portfolio invests in securities that meet the Sub-Investment Manager's criteria set out in the Sustainable Exclusion Policy and exclude securities prohibited by the Enhanced Sustainable Exclusion Policy, as detailed in the "Sustainable Investment Criteria" section of the Prospectus.

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed in the SFDR Annex. These environmental and social characteristics are considered using the NB ESG Quotient. Foundational to the NB ESG Quotient is the NB materiality matrix, which focuses on the ESG characteristics that are considered to be the most material drivers of ESG risk for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager also applies the Global Standards Policy which prevents investment in companies that most egregiously violate environmental and/or social minimum standards.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors seeking capital appreciation opportunities through equity investments in global securities exposed to long-term investment themes. Investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept periods of market volatility particularly over short time periods. Investors are likely to have a medium to long-term investment horizon.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.70%	0.00%
B, C2, E	0.00%	1.70%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	1.10%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.85%	0.00%
M	2.00%	1.70%	0.80%
P	5.00%	0.81%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.28%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the "Administration Fees" heading in the "Fees and Expenses" section of the Prospectus.

**Contingent deferred sales charges**

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%

<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

For further information on fees, please refer to the “*Fees and Expenses*” section of the Prospectus.

### Neuberger Berman 5G Connectivity Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing in financial derivative instruments as described below. The Portfolio will not use FDI extensively or primarily for investment purposes. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

#### Investment Objective

The Portfolio aims to achieve a target average return of 3-5% over the Benchmark (as specified in the “*Benchmark*” section below) before fees over a market cycle (typically 3 years) from investing primarily in a portfolio of global equity holdings, focusing on companies that are involved or derive benefit from Next Generation Connectivity (as defined below).

Investors should note that the target return is not guaranteed over a market cycle, a 12-month or any period and the Portfolio’s capital is at risk. Investors should also note that, over the course of a market cycle, there may be significant periods of time during which the performance of the Portfolio will deviate from the targeted return and the Portfolio may experience periods of negative return. There can be no guarantee that the Portfolio will ultimately achieve its investment objective.

#### Investment Approach

The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

In seeking to achieve the Portfolio’s investment objective, the Sub-Investment Manager pursues the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to the development and enhancement of mobile internet and 5G connectivity (“**Next Generation Connectivity**”):

- Qualitative business analysis: to identify companies which are key enablers of Next Generation Connectivity, as well as companies that are well-positioned to benefit from the new business models related to Next Generation Connectivity (for example, autonomous vehicles or smart home technology);
- Quantitative screening: to identify stocks that it believes may be too illiquid or have too small a market capitalisation;
- Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success which is determined by reference to existing financial data (eg, market share data); and
- Security selection and portfolio construction: Selects companies with the ability to provide solutions to drive Next Generation Connectivity that it believes have 50% - 100% capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.

Using this universe, the Sub-Investment Manager further evaluates those companies, seeking to identify companies who are leaders in their industries. The Sub-Investment Manager believes that the companies who are leaders in their industries are identified through the quality of their product, technology, processes and market access. The Sub-Investment Manager will review the financial position and results of the companies. In-person management meetings, where possible, are then conducted with members of senior management of the relevant companies to assess financial and operating metrics (e.g. sales growth and product offering) and the quality of the company’s management team.

The fundamental research seeks to identify companies with the following characteristics:

- Stock prices which are undervalued relative to long-term cash flow growth potential;
- Industry leadership companies with high market share, pricing power, or better technology/business models relative to peers, or new entrants gaining market share;
- Potential for significant improvement in the company's business (e.g. top line growth greater than market/peers, margin expansion, and/or increased cash flow generation);
- Strong financial characteristics, including growth, margins, and/or capital returns and historic valuations on metrics such as price to cash flow, price to earnings or price to book value; and
- Proven management track record.

The Portfolio seeks to reduce risk by diversifying across countries and economic sectors. Although, it has the flexibility to invest a significant portion of its assets in one country or region, it generally intends to remain diversified across countries and geographical regions.

The Portfolio may invest directly in China A Shares through Stock Connect and through the qualified foreign investors ("QFI") regime, as described below.

The Portfolio may also invest in debt instruments and money market instruments on an ancillary basis.

Investors should note that this Portfolio seeks to apply the Sustainable Exclusion Policy that has been adopted by the Sub-Investment Manager along with the application of the exclusions set out in the Enhanced Sustainable Exclusion Policy, as such terms are defined within the "Sustainable Investment Criteria" section of the Prospectus. Investors should refer to the information contained in that section and the SFDR Annex for further details about the application of both the Sustainable Exclusion Policy and Enhanced Sustainable Exclusion Policy to the Portfolio.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

---

#### Benchmark

The MSCI All-Country World Index (ACWI) (Total Return, net of tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed and emerging markets.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

#### Base Currency

US Dollars (USD).

---

#### Instruments / Asset Classes

The Portfolio can invest in or be exposed to the following types of assets, which will be listed or traded on Recognised Markets or, if unlisted, will comply with the Central Bank requirements.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock, American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution and, subject to a limit of 10% of the Portfolio's Net Asset Value, recently issued securities of the types described above, which are unlisted but have been issued with an undertaking to apply for admission to listing on a Recognised Market within a year of issue.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property

---

(eg, data centres). The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales. Exposure to REITs may arise when the Sub-Investment Manager identifies opportunities in such securities which are linked / support the evolution of Next Generation Connectivity (such as data centre REITs).

**Participatory Notes (“P-Notes”)** which are securities issued by banks or broker-dealers that are designed to replicate the performance of issuers and markets (in which the Portfolio can invest directly) by giving exposure to the performance of specific stocks that the Portfolio may not be able to invest in directly because of local holding restrictions affecting such stocks in the jurisdiction of their issue. The Portfolio shall only invest in listed P-Notes for India, China and Vietnam.

**FDI** will be used for investment, hedging and/or efficient portfolio management and subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement:

- Warrants and rights may be used to take exposure to equity securities of the type described above.
- Single stock options may be used to take exposure to equity securities of the type described above and UCITS eligible equity index options may be used to hedge or efficiently manage some portions or all of the Portfolio
- Convertible Bonds and Convertible Preferred Stock. Convertible bonds enable the holder to convert their investment in the bonds into the issuer’s common stock at a pre-agreed price and convertible preferred stock enable the holder to convert their investment in the preferred stock into the issuer’s common stock at a pre-agreed rate.
- Forward currency contracts may be used to hedge currency risk.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to achieve a rate of return greater than the market. The indices utilised for hedging or efficient portfolio management purposes will be broad-based, UCITS-eligible indices which provide exposure to the performance of equities and details of such indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes (including ETFs which are structured as collective investment schemes) which are themselves exposed to investments that are similar to the Portfolio’s other investments, provided that the Portfolio may not invest more than 10% of its Net Asset Value in other collective investment schemes which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Sub-Investment Manager or its affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank’s rules, which may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 200% of their net asset value; (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**ETFs.** ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market

segment or index. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Fixed Income Securities (Debt Securities).** The Portfolio may invest in debt instruments, such as bonds and notes, issued by corporate or government issuers, which may be rated or unrated (although not more than 10% of NAV will be invested in debt instruments which are rated below investment grade) and may have fixed or floating interest rates and will not embed derivatives.

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under "Collective Investment Schemes" above, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**Repo Contracts.** The Portfolio may use Repo Contracts subject to the conditions and limits set out in the Prospectus.

---

## Stock Connect

The China Securities Regulatory Commission and the Securities and Futures Commission of Hong Kong have an approved program which establishes mutual stock markets access between the PRC and Hong Kong, namely Stock Connect. The Sub-Investment Manager may pursue the Portfolio's investment objective by investing up to 30% of the Portfolio's Net Asset Value directly in certain eligible China A Shares via Stock Connect.

The Shanghai Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SSE. The Shenzhen Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SZSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SZSE.

Each of the Shanghai Stock Connect and Shenzhen Stock Connect comprises a Northbound Trading Link and a Southbound Trading Link. Under the Northbound Trading Link, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions), through their Hong Kong brokers and a securities trading service company established by the SEHK, may trade Eligible Securities listed on the SSE and the SZSE by routing orders to the SSE and the SZSE respectively.

### Eligible Securities

Among the different types of SSE-or SZSE-listed securities, only China A Shares and ETFs are currently permitted for Northbound trading under Stock Connect.

Currently, Hong Kong and overseas investors are able to trade certain SSE Securities. Eligible Securities under the Northbound Trading Link of the Shanghai Stock Connect include all the constituent stocks from time to time of the SSE 180 Index and SSE 380 Index, and all the SSE-listed China A Shares that are not included as constituent stocks of the relevant indices but which have corresponding China H Shares listed on the SEHK, except the following:

- SSE-listed shares which are not traded in CNY; and
- SSE-listed shares which are included in the "risk alert board".

Eligible Securities under the Northbound Trading Link of the Shenzhen Stock Connect include any constituent stock of the SZSE Component Index and the SZSE Small/Mid Cap Innovation Index which has a market capitalisation of CNY6 billion or above and all

---

---

SZSE-listed shares of companies which have issued both China A Shares and China H Shares, except the following:

- SZSE-listed shares which are not traded in CNY; and
- SZSE-listed shares which are included in the “risk alert board” or under delisting arrangement.

In addition, Hong Kong and overseas investors are able to trade eligible SSE-listed and SZSE-listed ETFs that satisfy the relevant criteria at a regular review and are accepted as eligible ETFs for Northbound trading under Stock Connect. Regular reviews will be performed to determine the eligible ETFs for Northbound trading every six months.

It is expected that the list of Eligible Securities will be subject to review and may change from time to time.

If an Eligible Security ceases to be classified as such, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions) will only be allowed to sell holdings of such Eligible Security but will be restricted from buying any more of such Eligible Security.

#### Trading day

Investors (including the Portfolio, subject to its investment approach and restrictions) are only allowed to trade through Stock Connect on days on which both markets are open for trading, and banking services are available in both markets on the corresponding settlement days.

#### Trading quota

Trading under Stock Connect is subject to the Daily Quota. Northbound trading through each Stock Connect is subject to a separate set of Daily Quota. The Daily Quota limits the maximum net buy value of cross-boundary trades under each Stock Connect per day. The SEHK will monitor the quota and publish the remaining balance of the Northbound Daily Quota at scheduled times on the SEHK’s website. The Daily Quota may change from time to time without prior notice and investors should refer to the SEHK’s website and other information published by the SEHK for up-to-date information.

#### Settlement and custody

The HKSCC will be responsible for the clearing, settlement and the provision of depository, nominee and other related services of the trades executed by Hong Kong market participants and investors.

The Eligible Securities traded through Stock Connect are issued in scripless form, so investors do not hold any physical securities. Hong Kong and overseas investors who have acquired Eligible Securities through Northbound trading should maintain the Eligible Securities with their brokers’ or custodians’ stock accounts with CCASS, operated by HKSCC.

#### Corporate actions and shareholders’ meetings

Notwithstanding the fact that the HKSCC does not claim proprietary interests in the Eligible Securities held in its omnibus stock account in ChinaClear, ChinaClear as the share registrar for the Eligible Securities will still treat HKSCC as one of the shareholders when it handles corporate actions in respect of such Eligible Securities.

HKSCC monitors the corporate actions affecting Eligible Securities and keeps the relevant brokers or custodians participating in CCASS (“CCASS participants”) informed of all such corporate actions that require CCASS participants to take steps in order to participate in them.

SSE and SZSE-listed companies usually announce their annual general meeting / extraordinary general meeting information about one month before the meeting date. A poll is called on all resolutions for all votes. HKSCC will advise CCASS participants of all general meeting details such as meeting date, time, venue and the number of resolutions.

#### Foreign shareholding restrictions

The CSRC stipulates that, when holding China A Shares through Stock Connect, Hong Kong and overseas investors are subject to the following shareholding restrictions:

---

- Single foreign investors' shareholding by any Hong Kong or overseas investor in a China A Share must not exceed 10% of the total issued shares; and
- Aggregate foreign investors' shareholding by all Hong Kong and overseas investors in a China A Share must not exceed 30% of the total issue shares.

Should the shareholding of a single investor in a China A Share listed company exceed the above restriction, the investor would be required to unwind his position on the excessive shareholding according to a last-in-first-out basis within a specific period. The SSE, the SZSE and the SEHK will issue warnings or restrict the buy orders for the related China A Shares if the percentage of total shareholding is approaching the upper limit.

SSE and SZSE-listed ETFs are not subject to the aforementioned shareholding restrictions.

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities, subject to its investment approach and restrictions.

#### Trading fees and taxes

In addition to paying trading fees and stamp duties in connection with trading of Eligible Securities, the Portfolio may be subject to other fees and taxes concerned with income arising from transfers of stocks or ETFs (if applicable) which are determined by the relevant authorities.

Further information about Stock Connect is available online at the website:

[https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc\\_lang=en](https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc_lang=en)

## **Qualified Foreign Institutional Investors**

The qualified foreign institutional investor program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access to the SSE and SZSE. Under this program, licensed investors can buy and sell CNY-denominated China A Shares, subject to specified quotas that determine the amount of money that the licensed foreign investors are permitted to invest in China's capital markets.

Neuberger Berman Europe Limited received its QFI licence on 3 May 2012.

#### Eligible Securities

QFI permitted securities include CNY financial instruments in which QFI are allowed to invest from time to time and which may include (1) stocks, depository receipts, bonds, bond repurchases, and asset-backed securities traded or transferred on stock exchanges; (2) shares and other types of securities transferred on the National Equities Exchange and Quotations (NEEQ); (3) products and derivatives on bonds, interest rates and foreign exchange traded on the domestic inter-bank bond market which are deemed by PBOC as eligible for QFI; (4) investment funds; and (5) other financial instruments as approved by the CSRC.

#### Trading day

Investors (including the Portfolio) are only allowed to trade through the QFI regime on days on which the relevant PRC markets are open for trading, and banking services are available on the corresponding settlement days.

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities.

#### QFI status

Neuberger Berman Europe Limited has obtained QFI status. However, under the relevant investment regulations, the QFI status of Neuberger Berman Europe Limited could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFI status of the Sub-Investment Manager is suspended or revoked, the Portfolio may be required to dispose of its securities held through the QFI and may

not be able to access the Chinese securities market via the QFI as contemplated in this Supplement, which may have an adverse effect on the Portfolio's performance.

Moreover, the relevant investment regulations generally apply at the QFI level and not simply to investments made on behalf of the Portfolio. Thus investors should be aware that violations of the relevant investment regulations arising out of activities through the QFI other than those conducted by the Portfolio could result in the revocation of or other regulatory action in respect of the QFI as a whole. The regulations relating to the investment restrictions in China A Shares are also generally applied at the QFI level (as discussed in detail below), and the Portfolio may also be impacted by the actions of other investors utilising the QFI status. Hence the ability of the Portfolio to make investments utilising the QFI status of Neuberger Berman Europe Limited may be affected adversely by the investments of other investors utilising the QFI status of Neuberger Berman Europe Limited.

#### Custody

China A Shares traded on the Exchanges are dealt and held in dematerialised form through ChinaClear. Exchange-traded securities purchased on behalf of the Portfolio through the QFI are required to be recorded by ChinaClear as credited to a securities trading account maintained in the joint names of the QFI and the Company (or such other account name as required by the relevant investment regulations which may reference also the Portfolio).

The Company/the QFI expects to receive a legal opinion from a qualified PRC law firm confirming that, as a matter of PRC law, the QFI will have no ownership interest in the securities and that the Portfolio will ultimately and exclusively be entitled to ownership of the securities.

However, given that, pursuant to the relevant investment regulations, the QFI as account-holder will be the party entitled to the securities (albeit that this entitlement does not constitute an ownership interest or preclude the QFI purchasing securities on behalf of the Portfolio), the assets of the Portfolio may not be as well protected as they would be if it were possible for them to be registered and held solely in the name of the Company (or the Portfolio). In particular, given that the QFI belongs to the Neuberger Berman group, there is a risk that creditors of the Neuberger Berman group may incorrectly assume, contrary to the legal opinion referred to, that the Portfolio's assets belong to the Neuberger Berman group and such creditors may seek to gain control of the Portfolio's assets in lieu of such liabilities.

The evidence of title of exchange-traded securities in the PRC consists only of electronic book-entries in the depository and/or registry associated with the relevant Exchange. These arrangements of the depositories and registries are new and not fully tested in regard to their efficiency, accuracy and security.

In order to prevent any trading failure, ChinaClear will automatically settle any trades executed by the PRC securities trading house relating to the securities trading account maintained in the joint names of the Company (or the Portfolio) and the QFI. Accordingly all instructions issued by the PRC securities trading house relating to the securities trading account will be executed without the need of consent or direction of the Depository.

#### Investment restrictions

Investments in the PRC securities market via the QFI are subject to compliance with certain investment restrictions imposed by the relevant investment regulations including the following, which apply to each foreign investor (including the Portfolio) investing through the QFI and will affect the Portfolio's ability to invest in China A Shares and carry out their investment objectives:

- (i) shares held by each underlying foreign investor (such as the Portfolio) which invests (through QFI or other permissible channels) in one PRC listed company should not exceed 10% of the total shares of such company; and
- (ii) aggregate China A Shares held by all underlying foreign investors (such as the Portfolio and all other foreign investors) which invest (through QFI or other permissible channels) in one PRC listed company should not exceed 30% of the total shares of such company.

Although it has not been explicitly provided under the relevant investment regulations, in practice, the 10% single foreign shareholding restriction is also applied at the QFI level, under which a QFI may not hold 10% or more shares of any listed company, regardless of the fact that such QFI is holding such shares for a number of different clients. Accordingly, as the QFI status of Neuberger Berman Europe Limited is utilised by the Portfolio and other investors as well, the capability of the Portfolio to invest in the shares of certain listed company may be limited due to the investments in the shares of such listed company by other investors who also invest through the QFI status of Neuberger Berman Europe Limited. Specifically, when the shareholding of such other investors in a PRC listed company reaches 10%, the Portfolio may not be able to buy any such shares, even if the then effective price of such shares is advantageous to the Portfolio.

Similarly, since the 30% aggregate foreign shareholding restriction is monitored at the level of all foreign investors, the capability of the Portfolio to invest in China A Shares of certain listed company may also be limited due to the investments made by other foreign investors.

#### Disclosure to CSRC

In practice, structured products issued by QFI to give foreign investors access to China A Shares are required to be reported to CSRC. The information reported may include information on the Portfolio as applicable.

#### Disclosure to the Exchange

According to the relevant investment regulations, where the SSE or the SZSE spots any abnormal trading which may affect the normal trading order, it may request the involved QFI to promptly report the securities transaction and shareholding information of the QFI's relevant underlying investors, which may include information on the Portfolio.

### **Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the “*Investment Restrictions*” section of the Prospectus and the UCITS Regulations.
- The Portfolio may invest up to 10% of its Net Asset Value in fixed income securities.
- The Portfolio may invest up to 30% of its Net Asset Value in China A Shares.
- It is the intention of the Sub-Investment Manager to invest a maximum of 50% of the Portfolio's Net Asset Value in Emerging Market Countries.
- The Portfolio may invest up to 10% of its Net Asset Value in REITs.
- The Portfolio may invest up to 10% of its Net Asset Value in recently issued securities.
- The Portfolio may not invest greater than 5% of its Net Asset Value in securities traded on Russian markets. Investment will only be made in securities that are listed/traded on the Moscow exchange.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

### **Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. Investors should read and consider the entire “*Investment Risks*” section of the Prospectus, in particular the risks identified in the “*Investment Risks*” section of this Supplement which are relevant to the Portfolio. In particular, investors should note that companies related to Next Generation Connectivity may be subject to significant volatility in growth rates due to rapidly changing market conditions and/or participants, more advanced or new technologies, new competing products and/or enhancements in existing products. The success of this sector is heavily dependent on patents and intellectual property rights and/or licences. The profitability of companies related to Next Generation Connectivity may be adversely impacted by the loss or impairment of these intellectual property assets. Such companies may also be subject to unpredictable changes in competition. There is no assurance that products or services offered by Next Generation Connectivity companies will not be rendered obsolete or be adversely affected by competing products, or that such companies will not be adversely affected by other challenges, such as instability, fluctuation, or an overall decline within the industry. Companies related to Next Generation Connectivity may

also be affected by regulatory risks, cyber security risks, government intervention and political risks. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Sub-Investment Manager may use future foreign currency exchange contracts in order to hedge some currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

#### Environmental, Social and Governance ("ESG")

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

The Portfolio invests in securities that meet the Sub-Investment Manager's criteria set out in the Sustainable Exclusion Policy and exclude securities prohibited by the Enhanced Sustainable Exclusion Policy, as detailed in the "*Sustainable Investment Criteria*" section of the Prospectus.

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed in the SFDR Annex below. These environmental and social characteristics are considered using the NB ESG Quotient. Foundational to the NB ESG Quotient is the NB materiality matrix, which focuses on the ESG characteristics that are considered to be the most material drivers of ESG risk for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager also applies the Global Standards Policy which prevents investment in companies that most egregiously violate environmental and/or social minimum standards.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors seeking capital appreciation opportunities through equity investments in global securities exposed to long-term investment themes. Investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept periods of market volatility particularly over short time periods. Investors are likely to have a medium to long-term investment horizon.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.70%	0.00%
B, C2, E	0.00%	1.70%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	1.10%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.85%	0.00%
M	2.00%	1.70%	0.80%

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
P	5.00%	0.81%	0.00%
T	5.00%	1.70%	0.00%
U	3.00%	1.28%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 – 729	730 - 1094	1095 – 1459	> 1459
B	4%	3%	2%	1%	0%
C, C1	1%	0%	0%	0%	0%
C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus.

### Neuberger Berman InnovAsia 5G Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing in financial derivative instruments as described below. The Portfolio will not use FDI extensively or primarily for investment purposes. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

<b>Investment Objective</b>	The Portfolio aims to invest primarily in a portfolio of equity holdings, focusing on companies that are involved in or derive benefit from Innovative Technologies (as defined below).
<b>Investment Approach</b>	<p>The Portfolio will seek to achieve its objective by investing primarily in equity securities which are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors with innovative technologies or business models that:</p> <ul style="list-style-type: none"> <li>• are incorporated or organized under the laws of a country in Asia, or that have a principal office in Asia;</li> <li>• generally derive a majority of their incremental growth from (a) goods that are produced or sold, (b) investments made, or (c) services performed, in Asia: or</li> <li>• generally hold a majority of their assets in Asia.</li> </ul> <p>The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.</p> <p>In seeking to achieve the Portfolio's investment objective, the Sub-Investment Manager pursues the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to disruptive technologies, innovative business models with a relatively low penetration rate in Asia or which are in a relatively early growth phase as well as long-term, structural trends and themes such as 5G / internet of things, (including but not limited to data infrastructure, connected devices or advanced semiconductors), digital lifestyle (including but not limited to healthcare, education or internet and consumer) and industrial innovations (including but not limited to robotics, clean tech or smart logistics) ("<b>Innovative Technologies</b>"):</p> <ul style="list-style-type: none"> <li>• Qualitative business analysis: to identify companies which are key enablers of Innovative Technologies, as well as companies that are well-positioned to benefit from new business models related to Innovative Technologies;</li> <li>• Quantitative screening: to identify stocks that the Sub-Investment Manager believes may be too illiquid or have too small a market capitalisation;</li> <li>• Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success which is determined by reference to existing financial data (eg, market share data); and</li> <li>• Security selection and portfolio construction: to select companies with the ability to provide solutions to drive Innovative Technologies that the Sub-Investment Manager believes have significant capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.</li> </ul> <p>Using this universe, the Sub-Investment Manager further evaluates those companies, seeking to identify companies who are leaders in their industries with a focus on the Asian market. The Sub-Investment Manager believes that companies who are leaders in their industries are identified through the quality of their product, technology, processes and market access. The Sub-Investment Manager will review the financial position and results of the companies. In-person management meetings, where possible, are then conducted with members of senior management of the relevant companies to assess financial and operating metrics (e.g. sales growth and product offering) and the quality of the company's management team.</p> <p>The fundamental research seeks to identify companies with the following characteristics:</p> <ul style="list-style-type: none"> <li>• Stock prices which are undervalued relative to long-term cash flow growth potential;</li> </ul>

- Industry leadership companies with high market share, pricing power, or better technology/business models relative to peers, or new entrants gaining market share;
- Potential for significant improvement in the company's business (e.g. top line growth greater than market/peers, margin expansion, and/or increased cash flow generation);
- Strong financial characteristics, including growth, margins, and/or capital returns and historic valuations on metrics such as price to cash flow, price to earnings or price to book value; and
- Proven management track record.

The Sub-Investment Manager seeks to reduce risk by building a portfolio typically in a range of 30-60 stocks, which is diversified across countries and economic sectors. Although, the Sub-Investment Manager has the flexibility to invest a significant portion of the Portfolio's assets in one country, the Sub-Investment Manager generally intends to remain diversified across countries.

The Portfolio may invest directly in China A Shares through Stock Connect and through the qualified foreign investors ("QFI") regime, as described below.

The Portfolio may also invest in debt instruments and money market instruments on an ancillary basis.

Investors should note that this Portfolio seeks to apply the Sustainable Exclusion Policy along with the application of the exclusions set out in the Enhanced Sustainable Exclusion Policy, as such terms are defined within the "Sustainable Investment Criteria" section of the Prospectus. Investors should refer to the information contained in that section and the SFDR Annex for further details about the application of both the Sustainable Exclusion Policy and Enhanced Sustainable Exclusion Policy to the Portfolio.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

<b>Benchmark</b>	<p>The MSCI AC Asia Index (Total Return, net of tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to measure the performance of large and mid cap representation across developed markets countries and emerging market countries in Asia.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p> <p>The Benchmark has not been designated as a reference benchmark for the purposes of SFDR. Therefore, it is not consistent with the promotion of environmental or social characteristics.</p>
------------------	--

<b>Base Currency</b>	US Dollars (USD).
----------------------	-------------------

<b>Instruments / Asset Classes</b>	<p>The Portfolio can invest in or be exposed to the following types of assets, which will be listed or traded on Recognised Markets or, if unlisted, will comply with the Central Bank requirements.</p> <p><b>Equity and Equity-linked Securities.</b> These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock, American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution and, subject to a limit of 10% of the Portfolio's Net Asset Value, recently issued securities of the types described above, which are unlisted but have been issued with an undertaking to apply for admission to listing on a Recognised Market within a year of issue.</p> <p><b>Equity Real Estate Investment Trusts ("REITs").</b> REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property (eg, data centres). The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales. Exposure to REITs may arise when the Sub-Investment Manager identifies opportunities in such securities which are linked to or support Innovative Technologies (such as data centre REITs).</p>
------------------------------------	---

**Participatory Notes (“P-Notes”)** which are securities issued by banks or broker-dealers that are designed to replicate the performance of issuers and markets (in which the Portfolio can invest directly) by giving exposure to the performance of specific stocks that the Portfolio may not be able to invest in directly because of local holding restrictions affecting such stocks in the jurisdiction of their issue. The Portfolio shall only invest in listed P-Notes for India, China and Vietnam.

**Financial Derivative Instruments (“FDIs”).** FDIs will be used for investment, hedging and/or efficient portfolio management and subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement:

- Warrants and rights may be used to take exposure to equity securities of the type described above.
- Single stock options may be used to take exposure to equity securities of the type described above and UCITS eligible equity index options may be used to hedge or efficiently manage some portions or all of the Portfolio
- Convertible Bonds and Convertible Preferred Stock. Convertible bonds enable the holder to convert their investment in the bonds into the issuer’s common stock at a pre-agreed price and convertible preferred stock enable the holder to convert their investment in the preferred stock into the issuer’s common stock at a pre-agreed rate.
- Forward currency contracts may be used to hedge currency risk.

As the Portfolio may purchase FDIs generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to achieve a rate of return greater than the market. The indices utilised for hedging or efficient portfolio management purposes will be broad-based, UCITS-eligible indices which provide exposure to the performance of equities and details of such indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes (including ETFs which are structured as collective investment schemes) which are themselves exposed to investments that are similar to the Portfolio’s other investments, provided that the Portfolio may not invest more than 10% of its Net Asset Value in other collective investment schemes which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank’s rules, which may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 200% of their net asset value; (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**ETFs.** ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio’s other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Fixed Income Securities (Debt Securities).** The Portfolio may invest in debt instruments, such as bonds and notes, issued by corporate or government issuers, which may be rated or unrated (although not more than 10% of NAV will be invested in debt instruments which are rated below investment grade) and may have fixed or floating interest rates and will not embed derivatives.

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may

include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under “Collective Investment Schemes” above, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as “junk bonds”.

**Repo Contracts.** The Portfolio may use Repo Contracts subject to the conditions and limits set out in the Prospectus.

### Stock Connect

The China Securities Regulatory Commission and the Securities and Futures Commission of Hong Kong have an approved program which establishes mutual stock markets access between the PRC and Hong Kong, namely Stock Connect. The Sub-Investment Manager may pursue the Portfolio's investment objective by investing up to 30% of the Portfolio's Net Asset Value directly in certain eligible China A Shares via Stock Connect.

The Shanghai Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SSE. The Shenzhen Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SZSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SZSE.

Each of the Shanghai Stock Connect and Shenzhen Stock Connect comprises a Northbound Trading Link and a Southbound Trading Link. Under the Northbound Trading Link, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions), through their Hong Kong brokers and a securities trading service company established by the SEHK, may trade Eligible Securities listed on the SSE and the SZSE by routing orders to the SSE and the SZSE respectively.

#### Eligible Securities

Among the different types of SSE-or SZSE-listed securities, only China A Shares and ETFs are currently permitted for Northbound trading under Stock Connect.

Currently, Hong Kong and overseas investors are able to trade certain SSE Securities. Eligible Securities under the Northbound Trading Link of the Shanghai Stock Connect include all the constituent stocks from time to time of the SSE 180 Index and SSE 380 Index, and all the SSE-listed China A Shares that are not included as constituent stocks of the relevant indices but which have corresponding China H Shares listed on the SEHK, except the following:

- SSE-listed shares which are not traded in CNY; and
- SSE-listed shares which are included in the “risk alert board”.

Eligible Securities under the Northbound Trading Link of the Shenzhen Stock Connect include any constituent stock of the SZSE Component Index and the SZSE Small/Mid Cap Innovation Index which has a market capitalisation of CNY6 billion or above and all SZSE-listed shares of companies which have issued both China A Shares and China H Shares, except the following:

- SZSE-listed shares which are not traded in CNY; and
- SZSE-listed shares which are included in the “risk alert board” or under delisting arrangement.

In addition, Hong Kong and overseas investors are able to trade eligible SSE-listed and SZSE-listed ETFs that satisfy the relevant criteria at a regular review and are accepted as eligible ETFs for Northbound trading under Stock Connect. Regular reviews will be performed to determine the eligible ETFs for Northbound trading every six months.

It is expected that the list of Eligible Securities will be subject to review and may change from time to time.

If an Eligible Security ceases to be classified as such, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions) will only be allowed to sell holdings of such Eligible Security but will be restricted from buying any more of such Eligible Security.

---

#### Trading day

Investors (including the Portfolio, subject to its investment approach and restrictions) are only allowed to trade through Stock Connect on days on which both markets are open for trading, and banking services are available in both markets on the corresponding settlement days.

#### Trading quota

Trading under Stock Connect is subject to the Daily Quota. Northbound trading through each Stock Connect is subject to a separate set of Daily Quota. The Daily Quota limits the maximum net buy value of cross-boundary trades under each Stock Connect per day. The SEHK will monitor the quota and publish the remaining balance of the Northbound Daily Quota at scheduled times on the SEHK's website. The Daily Quota may change from time to time without prior notice and investors should refer to the SEHK's website and other information published by the SEHK for up-to-date information.

#### Settlement and custody

The HKSCC will be responsible for the clearing, settlement and the provision of depository, nominee and other related services of the trades executed by Hong Kong market participants and investors.

The Eligible Securities traded through Stock Connect are issued in scripless form, so investors do not hold any physical securities. Hong Kong and overseas investors who have acquired Eligible Securities through Northbound trading should maintain the Eligible Securities with their brokers' or custodians' stock accounts with CCASS, operated by HKSCC.

#### Corporate actions and shareholders' meetings

Notwithstanding the fact that the HKSCC does not claim proprietary interests in the Eligible Securities held in its omnibus stock account in ChinaClear, ChinaClear as the share registrar for the Eligible Securities will still treat HKSCC as one of the shareholders when it handles corporate actions in respect of such Eligible Securities.

HKSCC monitors the corporate actions affecting Eligible Securities and keeps the relevant brokers or custodians participating in CCASS ("CCASS participants") informed of all such corporate actions that require CCASS participants to take steps in order to participate in them.

SSE and SZSE-listed companies usually announce their annual general meeting / extraordinary general meeting information about one month before the meeting date. A poll is called on all resolutions for all votes. HKSCC will advise CCASS participants of all general meeting details such as meeting date, time, venue and the number of resolutions.

#### Foreign shareholding restrictions

The CSRC stipulates that, when holding China A Shares through Stock Connect, Hong Kong and overseas investors are subject to the following shareholding restrictions:

- Single foreign investors' shareholding by any Hong Kong or overseas investor in a China A Share must not exceed 10% of the total issued shares; and
- Aggregate foreign investors' shareholding by all Hong Kong and overseas investors in a China A Share must not exceed 30% of the total issue shares.

Should the shareholding of a single investor in a China A Share listed company exceed the above restriction, the investor would be required to unwind his position on the excessive shareholding according to a last-in-first-out basis within a specific period. The SSE, the SZSE and the SEHK will issue warnings or restrict the buy orders for the related China A Shares if the percentage of total shareholding is approaching the upper limit.

SSE and SZSE-listed ETFs are not subject to the aforementioned shareholding restrictions.

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities, subject to its investment approach and restrictions.

#### Trading fees and taxes

In addition to paying trading fees and stamp duties in connection with trading of Eligible Securities, the Portfolio may be subject to other fees and taxes concerned with income arising from transfers of stocks or ETFs (if applicable) which are determined by the relevant authorities.

---

Further information about Stock Connect is available online at the website:

[https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc\\_lang=en](https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc_lang=en)

### **Qualified Foreign Institutional Investors**

The qualified foreign institutional investor program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access to the SSE and SZSE. Under this program, licensed investors can buy and sell CNY-denominated China A Shares, subject to specified quotas that determine the amount of money that the licensed foreign investors are permitted to invest in China's capital markets.

Neuberger Berman Europe Limited received its QFI licence on 3 May 2012.

#### Eligible Securities

QFI permitted securities include CNY financial instruments in which QFI are allowed to invest from time to time and which may include (1) stocks, depository receipts, bonds, bond repurchases, and asset-backed securities traded or transferred on stock exchanges; (2) shares and other types of securities transferred on the National Equities Exchange and Quotations (NEEQ); (3) products and derivatives on bonds, interest rates and foreign exchange traded on the domestic inter-bank bond market which are deemed by PBOC as eligible for QFI; (4) investment funds; and (5) other financial instruments as approved by the CSRC.

#### Trading day

Investors (including the Portfolio) are only allowed to trade through the QFI regime on days on which the relevant PRC markets are open for trading, and banking services are available on the corresponding settlement days.

#### Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities.

#### QFI status

Neuberger Berman Europe Limited has obtained QFI status. However, under the relevant investment regulations, the QFI status of Neuberger Berman Europe Limited could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFI status of the Sub-Investment Manager is suspended or revoked, the Portfolio may be required to dispose of its securities held through the QFI and may not be able to access the Chinese securities market via the QFI as contemplated in this Supplement, which may have an adverse effect on the Portfolio's performance.

Moreover, the relevant investment regulations generally apply at the QFI level and not simply to investments made on behalf of the Portfolio. Thus investors should be aware that violations of the relevant investment regulations arising out of activities through the QFI other than those conducted by the Portfolio could result in the revocation of or other regulatory action in respect of the QFI as a whole. The regulations relating to the investment restrictions in China A Shares are also generally applied at the QFI level (as discussed in detail below), and the Portfolio may also be impacted by the actions of other investors utilising the QFI status. Hence the ability of the Portfolio to make investments utilising the QFI status of Neuberger Berman Europe Limited may be affected adversely by the investments of other investors utilising the QFI status of Neuberger Berman Europe Limited.

#### Custody

China A Shares traded on the Exchanges are dealt and held in dematerialised form through ChinaClear. Exchange-traded securities purchased on behalf of the Portfolio through the QFI are required to be recorded by ChinaClear as credited to a securities trading account maintained in the joint names of the QFI and the Company (or such other account name as required by the relevant investment regulations which may reference also the Portfolio).

The Company/the QFI expects to receive a legal opinion from a qualified PRC law firm confirming that, as a matter of PRC law, the QFI will have no ownership interest in the securities and that the Portfolio will ultimately and exclusively be entitled to ownership of the securities.

However, given that, pursuant to the relevant investment regulations, the QFI as account-holder will be the party entitled to the securities (albeit that this entitlement does not constitute an ownership interest or preclude the QFI purchasing securities on behalf of the Portfolio), the assets of the Portfolio may not be as well protected as they would be if it were possible for them to be registered and held solely in the name of the Company (or the Portfolio). In particular, given that the QFI belongs

to the Neuberger Berman group, there is a risk that creditors of the Neuberger Berman group may incorrectly assume, contrary to the legal opinion referred to, that the Portfolio's assets belong to the Neuberger Berman group and such creditors may seek to gain control of the Portfolio's assets in lieu of such liabilities.

The evidence of title of exchange-traded securities in the PRC consists only of electronic book-entries in the depository and/or registry associated with the relevant Exchange. These arrangements of the depositories and registries are new and not fully tested in regard to their efficiency, accuracy and security.

In order to prevent any trading failure, ChinaClear will automatically settle any trades executed by the PRC securities trading house relating to the securities trading account maintained in the joint names of the Company (or the Portfolio) and the QFI. Accordingly all instructions issued by the PRC securities trading house relating to the securities trading account will be executed without the need of consent or direction of the Depository.

#### Investment restrictions

Investments in the PRC securities market via the QFI are subject to compliance with certain investment restrictions imposed by the relevant investment regulations including the following, which apply to each foreign investor (including the Portfolio) investing through the QFI and will affect the Portfolio's ability to invest in China A Shares and carry out their investment objectives:

- (i) shares held by each underlying foreign investor (such as the Portfolio) which invests (through QFI or other permissible channels) in one PRC listed company should not exceed 10% of the total shares of such company; and
- (ii) aggregate China A Shares held by all underlying foreign investors (such as the Portfolio and all other foreign investors) which invest (through QFI or other permissible channels) in one PRC listed company should not exceed 30% of the total shares of such company.

Although it has not been explicitly provided under the relevant investment regulations, in practice, the 10% single foreign shareholding restriction is also applied at the QFI level, under which a QFI may not hold 10% or more shares of any listed company, regardless of the fact that such QFI is holding such shares for a number of different clients. Accordingly, as the QFI status of Neuberger Berman Europe Limited is utilised by the Portfolio and other investors as well, the capability of the Portfolio to invest in the shares of certain listed company may be limited due to the investments in the shares of such listed company by other investors who also invest through the QFI status of Neuberger Berman Europe Limited. Specifically, when the shareholding of such other investors in a PRC listed company reaches 10%, the Portfolio may not be able to buy any such shares, even if the then effective price of such shares is advantageous to the Portfolio.

Similarly, since the 30% aggregate foreign shareholding restriction is monitored at the level of all foreign investors, the capability of the Portfolio to invest in China A Shares of certain listed company may also be limited due to the investments made by other foreign investors.

#### Disclosure to CSRC

In practice, structured products issued by QFI to give foreign investors access to China A Shares are required to be reported to CSRC. The information reported may include information on the Portfolio as applicable.

#### Disclosure to the Exchange

According to the relevant investment regulations, where the SSE or the SZSE spots any abnormal trading which may affect the normal trading order, it may request the involved QFI to promptly report the securities transaction and shareholding information of the QFI's relevant underlying investors, which may include information on the Portfolio.

#### **Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the "Investment Restrictions" section of the Prospectus and the UCITS Regulations.
- The Portfolio may invest up to 10% of its Net Asset Value in fixed income securities.
- The Portfolio may invest up to 30% of its Net Asset Value in China A Shares.
- The Portfolio may invest up to 10% of its Net Asset Value in REITs.
- The Portfolio may invest up to 10% of its Net Asset Value in recently issued securities.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

**Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. Investors should read and consider the entire “*Investment Risks*” section of the Prospectus, in particular the risks identified in the “*Investment Risks*” section of this Supplement which are relevant to the Portfolio. In particular, investors should note that companies related to Innovative Technologies may be subject to significant volatility in growth rates due to rapidly changing market conditions and/or participants, more advanced or new technologies, new competing products and/or enhancements in existing products. The success of this sector is heavily dependent on patents and intellectual property rights and/or licences. The profitability of companies related to Innovative Technologies may be adversely impacted by the loss or impairment of these intellectual property assets. Such companies may also be subject to unpredictable changes in competition. There is no assurance that products or services offered by Innovative Technologies companies will not be rendered obsolete or be adversely affected by competing products, or that such companies will not be adversely affected by other challenges, such as instability, fluctuation, or an overall decline within the industry. Companies related to Innovative Technologies may also be affected by regulatory risks, cyber security risks, government intervention and political risks. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Sub-Investment Manager may use future foreign currency exchange contracts in order to hedge some currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio’s Net Asset Value, as measured using the Commitment Approach, at any time.

**Environmental, Social and Governance**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and only invests in those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

The Sub-Investment Manager will manage the Portfolio in accordance with the ESG Policy on a continuous basis. The Sub-Investment Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process. A summary of the ESG Policy is detailed in the Annex VI of the Prospectus and it is available on the Neuberger Berman website, [www.nb.com/esg](http://www.nb.com/esg).

ESG themed investing is a core component of the Sub-Investment Manager’s strategy for the Portfolio. The Sub-Investment Manager shall also apply the (i) Controversial Weapons Policy, (ii) the Sustainable Exclusion Policy and (iii) the Enhanced Sustainable Exclusion Policy, when determining what investments to make for the Portfolio. Further details on these screening/exclusion policies are set out in the “*Sustainable Investment Criteria*” section of the Prospectus and in the SFDR Annex.

In addition, as part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed in the SFDR Annex. These environmental and social characteristics are considered using the NB ESG Quotient. Foundational to the NB ESG Quotient is the NB materiality matrix, which focuses on the ESG characteristics that are considered to be the most material drivers of ESG risk for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager also applies the Global Standards Policy which prevents investment in companies that most egregiously violate environmental and/or social minimum standards.

The Sub-Investment Manager prefers higher ESG rated companies over lower if the higher rated companies would better advance the theme of Innovative Technologies in a sustainable way. For the avoidance of doubt, while the Sub-Investment Manager will collaborate with Neuberger Berman’s centralised ESG team, no entity other than the Sub-Investment Manager will have discretion over the investment policy of the Portfolio.

The Sub-Investment Manager also participates in direct engagement with investee companies (e.g. face-to-face meetings, frequent phone contact with senior management, discussions with customers, suppliers and competitors and attendance at industry and company conferences). Engagement with investee companies is encouraged to mitigate risks and improve ESG and financial outcomes. The Sub-Investment Manager views this direct engagement, as an essential part of its investment process.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors seeking capital appreciation opportunities through equity investments primarily in Asian securities exposed to long-term investment themes. Investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept periods of market volatility particularly over short time periods. Investors are likely to have a medium to long-term investment horizon.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.70%	0.00%
B, C2, E	0.00%	1.70%	1.00%
C1	0.00%	1.80%	1.00%
C	0.00%	1.10%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.85%	0.00%
M	2.00%	1.70%	0.80%
P	5.00%	0.81%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.28%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
B	4%	3%	2%	1%	0%
C, C1	1%	0%	0%	0%	0%
C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus.

### Neuberger Berman Next Generation Space Economy Fund

**An investment in the Portfolio should not constitute a substantial proportion of an investment portfolio and may not be appropriate for all investors. Investors should note that the Portfolio may achieve its investment objective by investing in financial derivative instruments as described below. The Portfolio will not use FDI extensively or primarily for investment purposes. An investment in the Portfolio is not in the nature of a deposit in a bank account and is not protected by any government, government agency or other guarantee scheme which may be available to protect the holder of a bank deposit account. The value of Shares may go down as well as up and investors may not get back any of the amount invested.**

<b>Investment Objective</b>	The Portfolio seeks to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings that are involved in or derive benefit from the Next Generation Space Economy.
<b>Investment Approach</b>	<p>The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.</p> <p>The Next Generation Space Economy focuses on key enablers and beneficiaries of the space economy. The Sub-Investment Manager primarily invests in the following 3 categories of companies, which they believe are poised to benefit from the improving and cheaper access to and growing demand from space and the widening range of applications through which access to space is harnessed:</p> <ol style="list-style-type: none"> <li>1) Space Infrastructure: launch enablers (e.g. companies engaged in aerospace, avionics and propulsion) and satellites (e.g. companies building satellites or producing the systems, materials or electronics that they require);</li> <li>2) Technology Enablers: cyber and communication technology companies (e.g. companies that support edge computing, data protection and management, optical and radio sensors, cloud services and satellite ground station enhancements); and</li> <li>3) Applications: network services (e.g. companies providing internet connectivity and navigation which leverage our access to space) and secondary beneficiaries (e.g. companies engaged in air transportation, space tourism and insurance)</li> </ol> <p>(the “Next Generation Space Economy”).</p> <p>The Portfolio will seek to achieve its objective by investing primarily in equity securities which are issued by companies with innovative technologies or business models that:</p> <ul style="list-style-type: none"> <li>• generally derive a majority of their incremental growth or investment from (a) the build out of space infrastructure, (b) technologies that unlock the capabilities of these assets, and (c) services, industries or applications that leverage the insights and capabilities from space-based infrastructure that support commercial or industrial end markets; or</li> <li>• are an integral part of the global supply chain related to the Next Generation Space Economy and thus major beneficiaries of the emerging growth related to it.</li> </ul> <p>In seeking to achieve the Portfolio’s investment objective, the Sub-Investment Manager pursues the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to Next Generation Space Economy:</p> <ul style="list-style-type: none"> <li>• Investors should note that this Portfolio seeks to apply the Sustainable Exclusion Policy and the Global Standards Policy as such terms are defined within the “Sustainable Investment Criteria” section of the Prospectus. Investors should refer to the information contained in that section for further details about the application of both the Sustainable Exclusion Policy and the Global Standards Policy to the Portfolio.</li> <li>• The Sub-Investment Manager systematically considers and evaluates ESG characteristics, as an important component of its credit analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient on a continuous basis, as part of the Portfolio construction and investment management process. The NB ESG Quotient assigns weightings to issuers (relative to their peer group) for environmental and social characteristics (as detailed in the SFDR Annex) to derive the issuer’s NB ESG Quotient rating.</li> </ul>

- Creditworthiness is assessed by fundamental analysis aimed at assessing the issuer's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.
- Qualitative business analysis: to identify companies which operate within the long-term trend of the Next Generation Space Economy, including companies associated with the build out of space infrastructure, companies building and enabling technologies designed to harness the capabilities of these assets (including cloud computing/storage, edge computing, data management and protection) and companies that will leverage these insights and capabilities that these applications and services bring to the global economy, such as ride hailing, precision agriculture, supply chain management, space tourism.
- Quantitative screening: to (i) identify stocks that they believe may be too illiquid or have too small a market capitalisation; (ii) identify stocks that have capital appreciation potential over three to five years; and (iii) using the Sub-Investment Manager's fundamental analysis work to determine investment theses that guide buy and sell decisions.
- Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success.

Using this universe, the Sub-Investment Manager further evaluates those companies, seeking to identify companies who are leaders in their industries. The Sub-Investment Manager believes that companies who are leaders in their industries are identified through the quality of their product, technology, processes and market access. The Sub-Investment Manager will review the financial position and results of the companies. In-person management meetings, where possible, are then conducted with members of senior management of the relevant companies to assess financial and operating metrics (e.g. sales growth and product offering) and the quality of the company's management team.

This fundamental research seeks to identify companies with the following characteristics:

- Stock prices which are undervalued relative to long-term cash flow growth potential;
- Industry leadership companies with high market share, pricing power, or better technology/business models relative to peers, or new entrants gaining market share;
- Potential for significant improvement in the company's business (e.g. top line growth greater than market/peers, margin expansion, and/or increased cash flow generation);
- Potential for reduction in greenhouse gas ("GHG") emissions to enable the Portfolio to achieve its net-zero goal (as detailed further in the "Environmental, Social and Governance" section below);
- Strong financial characteristics, including growth, margins, and/or capital returns and historic valuations on metrics such as price to cash flow, price to earnings or price to book value; and
- Proven management track record.

The Sub-Investment Manager seeks to reduce risk by building a portfolio typically in a range of 25-50 stocks, which is diversified across countries and economic sectors. Although, the Sub-Investment Manager has the flexibility to invest a significant portion of the Portfolio's assets in one country, the Sub-Investment Manager generally intends to remain diversified across countries.

The Portfolio may invest directly in China A Shares through Stock Connect and through the qualified foreign investors ("QFI") regime, as described below.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmark.

#### **Benchmark**

The MSCI All-Country World Index (ACWI) (Total Return, net of tax, USD) is a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed and emerging markets.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

The Benchmark has not been designated as a reference benchmark for the purposes of SFDR. Therefore, it is not consistent with the promotion of environmental or social characteristics.

**Base Currency** US Dollars (USD).

**Instruments /  
Asset Classes**

The Portfolio can invest in or be exposed to the following types of assets, which will be listed or traded on Recognised Markets or, if unlisted, will comply with the Central Bank requirements.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock, American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution and, subject to a limit of 10% of the Portfolio's Net Asset Value, recently issued securities of the types described above, which are unlisted but have been issued with an undertaking to apply for admission to listing on a Recognised Market within a year of issue.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property (eg, data centres). The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales. Exposure to REITs may arise when the Sub-Investment Manager identifies opportunities in such securities which are linked to or support Innovative Technologies (such as data centre REITs).

**Participatory Notes ("P-Notes")** which are securities issued by banks or broker-dealers that are designed to replicate the performance of issuers and markets (in which the Portfolio can invest directly) by giving exposure to the performance of specific stocks that the Portfolio may not be able to invest in directly because of local holding restrictions affecting such stocks in the jurisdiction of their issue. The Portfolio shall only invest in listed P-Notes for India, China and Vietnam.

**Financial Derivative Instruments ("FDIs").** FDIs will be used for investment, hedging and/or efficient portfolio management and subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement:

- Warrants and rights may be used to take exposure to equity securities of the type described above.
- Single stock options may be used to take exposure to equity securities of the type described above and UCITS eligible equity index options may be used to hedge or efficiently manage some portions or all of the Portfolio
- Convertible Bonds and Convertible Preferred Stock. Convertible bonds enable the holder to convert their investment in the bonds into the issuer's common stock at a pre-agreed price and convertible preferred stock enable the holder to convert their investment in the preferred stock into the issuer's common stock at a pre-agreed rate.
- Forward currency contracts may be used to hedge currency risk.

As the Portfolio may purchase FDIs generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by purchasing derivative instruments and investing the remaining assets in such other securities as listed above to achieve a rate of return greater than the market. The indices utilised for hedging or efficient portfolio management purposes will be broad-based, UCITS-eligible indices which provide exposure to the performance of equities and details of such indices pertaining to the instruments utilised by the Portfolio will be contained in the annual report of the Company.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes (including ETFs which are structured as collective investment schemes) which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% of its Net Asset Value in other collective investment schemes which themselves invest in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such

investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions or the United States of America, will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged: (i) in excess of 200% of their net asset value; (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment funds measure their global exposure.

**ETFs.** ETFs are investment funds whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index. The ETFs will be located in Relevant Jurisdictions and will be authorised under the UCITS Directive or will be alternative investment funds which are eligible for investment by the Portfolio in accordance with the requirements of the Central Bank. The ETFs will represent investments that are similar to the Portfolio's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Fixed Income Securities (Debt Securities).** The Portfolio may invest in debt instruments, such as bonds and notes, issued by corporate or government issuers, which may be rated or unrated (although not more than 10% of NAV will be invested in debt instruments which are rated below investment grade) and may have fixed or floating interest rates and will not embed derivatives.

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under "Collective Investment Schemes" above, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**Repo Contracts.** The Portfolio may use Repo Contracts subject to the conditions and limits set out in the Prospectus.

### Stock Connect

The China Securities Regulatory Commission and the Securities and Futures Commission of Hong Kong have an approved program which establishes mutual stock markets access between the PRC and Hong Kong, namely Stock Connect. The Sub-Investment Manager may pursue the Portfolio's investment objective by investing up to 30% of the Portfolio's Net Asset Value directly in certain eligible China A Shares via Stock Connect.

The Shanghai Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SSE. The Shenzhen Stock Connect is a securities trading and clearing linked program developed by the SEHK, the SZSE and ChinaClear, with the aim of achieving mutual stock market access between the SEHK and the SZSE.

Each of the Shanghai Stock Connect and Shenzhen Stock Connect comprises a Northbound Trading Link and a Southbound Trading Link. Under the Northbound Trading Link, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions), through their Hong Kong brokers and a securities trading service company established by the SEHK, may trade Eligible Securities listed on the SSE and the SZSE by routing orders to the SSE and the SZSE respectively.

#### Eligible Securities

Among the different types of SSE-or SZSE-listed securities, only China A Shares and ETFs are currently permitted for Northbound trading under Stock Connect.

Currently, Hong Kong and overseas investors are able to trade certain SSE Securities. Eligible Securities under the Northbound Trading Link of the Shanghai Stock Connect include all the constituent stocks from time to time of the SSE 180 Index and SSE 380 Index, and all the SSE-listed

---

China A Shares that are not included as constituent stocks of the relevant indices but which have corresponding China H Shares listed on the SEHK, except the following:

- SSE-listed shares which are not traded in CNY; and
- SSE-listed shares which are included in the “risk alert board”.

Eligible Securities under the Northbound Trading Link of the Shenzhen Stock Connect include any constituent stock of the SZSE Component Index and the SZSE Small/Mid Cap Innovation Index which has a market capitalisation of CNY6 billion or above and all SZSE-listed shares of companies which have issued both China A Shares and China H Shares, except the following:

- SZSE-listed shares which are not traded in CNY; and
- SZSE-listed shares which are included in the “risk alert board” or under delisting arrangement.

In addition, Hong Kong and overseas investors are able to trade eligible SSE-listed and SZSE-listed ETFs that satisfy the relevant criteria at a regular review and are accepted as eligible ETFs for Northbound trading under Stock Connect. Regular reviews will be performed to determine the eligible ETFs for Northbound trading every six months.

It is expected that the list of Eligible Securities will be subject to review and may change from time to time.

If an Eligible Security ceases to be classified as such, Hong Kong and overseas investors (including the Portfolio, subject to its investment approach and restrictions) will only be allowed to sell holdings of such Eligible Security but will be restricted from buying any more of such Eligible Security.

#### Trading day

Investors (including the Portfolio, subject to its investment approach and restrictions) are only allowed to trade through Stock Connect on days on which both markets are open for trading, and banking services are available in both markets on the corresponding settlement days.

#### Trading quota

Trading under Stock Connect is subject to the Daily Quota. Northbound trading through each Stock Connect is subject to a separate set of Daily Quota. The Daily Quota limits the maximum net buy value of cross-boundary trades under each Stock Connect per day. The SEHK will monitor the quota and publish the remaining balance of the Northbound Daily Quota at scheduled times on the SEHK’s website. The Daily Quota may change from time to time without prior notice and investors should refer to the SEHK’s website and other information published by the SEHK for up-to-date information.

#### Settlement and custody

The HKSCC will be responsible for the clearing, settlement and the provision of depository, nominee and other related services of the trades executed by Hong Kong market participants and investors.

The Eligible Securities traded through Stock Connect are issued in scripless form, so investors do not hold any physical securities. Hong Kong and overseas investors who have acquired Eligible Securities through Northbound trading should maintain the Eligible Securities with their brokers’ or custodians’ stock accounts with CCASS, operated by HKSCC.

#### Corporate actions and shareholders’ meetings

Notwithstanding the fact that the HKSCC does not claim proprietary interests in the Eligible Securities held in its omnibus stock account in ChinaClear, ChinaClear as the share registrar for the Eligible Securities will still treat HKSCC as one of the shareholders when it handles corporate actions in respect of such Eligible Securities.

HKSCC monitors the corporate actions affecting Eligible Securities and keeps the relevant brokers or custodians participating in CCASS (“CCASS participants”) informed of all such corporate actions that require CCASS participants to take steps in order to participate in them.

SSE and SZSE-listed companies usually announce their annual general meeting / extraordinary general meeting information about one month before the meeting date. A poll is called on all resolutions for all votes. HKSCC will advise CCASS participants of all general meeting details such as meeting date, time, venue and the number of resolutions.

---

Foreign shareholding restrictions

The CSRC stipulates that, when holding China A Shares through Stock Connect, Hong Kong and overseas investors are subject to the following shareholding restrictions:

- Single foreign investors' shareholding by any Hong Kong or overseas investor in a China A Share must not exceed 10% of the total issued shares; and
- Aggregate foreign investors' shareholding by all Hong Kong and overseas investors in a China A Share must not exceed 30% of the total issue shares.

Should the shareholding of a single investor in a China A Share listed company exceed the above restriction, the investor would be required to unwind his position on the excessive shareholding according to a last-in-first-out basis within a specific period. The SSE, the SZSE and the SEHK will issue warnings or restrict the buy orders for the related China A Shares if the percentage of total shareholding is approaching the upper limit.

SSE and SZSE-listed ETFs are not subject to the aforementioned shareholding restrictions.

Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities, subject to its investment approach and restrictions.

Trading fees and taxes

In addition to paying trading fees and stamp duties in connection with trading of Eligible Securities, the Portfolio may be subject to other fees and taxes concerned with income arising from transfers of stocks or ETFs (if applicable) which are determined by the relevant authorities.

Further information about Stock Connect is available online at the website:

[https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc\\_lang=en](https://www.hkex.com.hk/Mutual-Market/Stock-Connect?sc_lang=en)

---

**Qualified  
Foreign  
Institutional  
Investors**

The qualified foreign institutional investor program permits certain licensed international investors to participate in the PRC's mainland stock exchanges, allowing foreign investors access to the SSE and SZSE. Under this program, licensed investors can buy and sell CNY-denominated China A Shares, subject to specified quotas that determine the amount of money that the licensed foreign investors are permitted to invest in China's capital markets.

Neuberger Berman Europe Limited received its QFI licence on 3 May 2012.

Eligible Securities

QFI permitted securities include CNY financial instruments in which QFI are allowed to invest from time to time and which may include (1) stocks, depository receipts, bonds, bond repurchases, and asset-backed securities traded or transferred on stock exchanges; (2) shares and other types of securities transferred on the National Equities Exchange and Quotations (NEEQ); (3) products and derivatives on bonds, interest rates and foreign exchange traded on the domestic inter-bank bond market which are deemed by PBOC as eligible for QFI; (4) investment funds; and (5) other financial instruments as approved by the CSRC.

Trading day

Investors (including the Portfolio) are only allowed to trade through the QFI regime on days on which the relevant PRC markets are open for trading, and banking services are available on the corresponding settlement days.

Currency

Hong Kong and overseas investors will trade and settle Eligible Securities in CNY only. Hence, the Portfolio will need to use CNY to trade and settle Eligible Securities.

QFI status

Neuberger Berman Europe Limited has obtained QFI status. However, under the relevant investment regulations, the QFI status of Neuberger Berman Europe Limited could be suspended or revoked under certain circumstances where the PRC regulators have discretions. If the QFI status of the Sub-Investment Manager is suspended or revoked, the Portfolio may be required to dispose of its securities held through the QFI and may not be able to access the Chinese securities market via the

---

QFI as contemplated in this Supplement, which may have an adverse effect on the Portfolio's performance.

Moreover, the relevant investment regulations generally apply at the QFI level and not simply to investments made on behalf of the Portfolio. Thus investors should be aware that violations of the relevant investment regulations arising out of activities through the QFI other than those conducted by the Portfolio could result in the revocation of or other regulatory action in respect of the QFI as a whole. The regulations relating to the investment restrictions in China A Shares are also generally applied at the QFI level (as discussed in detail below), and the Portfolio may also be impacted by the actions of other investors utilising the QFI status. Hence the ability of the Portfolio to make investments utilising the QFI status of Neuberger Berman Europe Limited may be affected adversely by the investments of other investors utilising the QFI status of Neuberger Berman Europe Limited.

#### Custody

China A Shares traded on the Exchanges are dealt and held in dematerialised form through ChinaClear. Exchange-traded securities purchased on behalf of the Portfolio through the QFI are required to be recorded by ChinaClear as credited to a securities trading account maintained in the joint names of the QFI and the Company (or such other account name as required by the relevant investment regulations which may reference also the Portfolio).

The Company/the QFI expects to receive a legal opinion from a qualified PRC law firm confirming that, as a matter of PRC law, the QFI will have no ownership interest in the securities and that the Portfolio will ultimately and exclusively be entitled to ownership of the securities.

However, given that, pursuant to the relevant investment regulations, the QFI as account-holder will be the party entitled to the securities (albeit that this entitlement does not constitute an ownership interest or preclude the QFI purchasing securities on behalf of the Portfolio), the assets of the Portfolio may not be as well protected as they would be if it were possible for them to be registered and held solely in the name of the Company (or the Portfolio). In particular, given that the QFI belongs to the Neuberger Berman group, there is a risk that creditors of the Neuberger Berman group may incorrectly assume, contrary to the legal opinion referred to, that the Portfolio's assets belong to the Neuberger Berman group and such creditors may seek to gain control of the Portfolio's assets in lieu of such liabilities.

The evidence of title of exchange-traded securities in the PRC consists only of electronic book-entries in the depository and/or registry associated with the relevant Exchange. These arrangements of the depositories and registries are new and not fully tested in regard to their efficiency, accuracy and security.

In order to prevent any trading failure, ChinaClear will automatically settle any trades executed by the PRC securities trading house relating to the securities trading account maintained in the joint names of the Company (or the Portfolio) and the QFI. Accordingly all instructions issued by the PRC securities trading house relating to the securities trading account will be executed without the need of consent or direction of the Depository.

#### Investment restrictions

Investments in the PRC securities market via the QFI are subject to compliance with certain investment restrictions imposed by the relevant investment regulations including the following, which apply to each foreign investor (including the Portfolio) investing through the QFI and will affect the Portfolio's ability to invest in China A Shares and carry out their investment objectives:

- (i) shares held by each underlying foreign investor (such as the Portfolio) which invests (through QFI or other permissible channels) in one PRC listed company should not exceed 10% of the total shares of such company; and
- (ii) aggregate China A Shares held by all underlying foreign investors (such as the Portfolio and all other foreign investors) which invest (through QFI or other permissible channels) in one PRC listed company should not exceed 30% of the total shares of such company.

Although it has not been explicitly provided under the relevant investment regulations, in practice, the 10% single foreign shareholding restriction is also applied at the QFI level, under which a QFI may not hold 10% or more shares of any listed company, regardless of the fact that such QFI is holding such shares for a number of different clients. Accordingly, as the QFI status of Neuberger Berman Europe Limited is utilised by the Portfolio and other investors as well, the capability of the Portfolio to invest in the shares of certain listed company may be limited due to the investments in the shares of such listed company by other investors who also invest through the QFI status of Neuberger Berman Europe Limited. Specifically, when the shareholding of such other investors in a

PRC listed company reaches 10%, the Portfolio may not be able to buy any such shares, even if the then effective price of such shares is advantageous to the Portfolio.

Similarly, since the 30% aggregate foreign shareholding restriction is monitored at the level of all foreign investors, the capability of the Portfolio to invest in China A Shares of certain listed company may also be limited due to the investments made by other foreign investors.

#### Disclosure to CSRC

In practice, structured products issued by QFI to give foreign investors access to China A Shares are required to be reported to CSRC. The information reported may include information on the Portfolio as applicable.

#### Disclosure to the Exchange

According to the relevant investment regulations, where the SSE or the SZSE spots any abnormal trading which may affect the normal trading order, it may request the involved QFI to promptly report the securities transaction and shareholding information of the QFI's relevant underlying investors, which may include information on the Portfolio.

### **Investment Restrictions**

- The Portfolio may expose up to 10% of its Net Asset Value in aggregate to the performance of other collective investment schemes which will comply with both the “*Investment Restrictions*” section of the Prospectus and the UCITS Regulations.
- The Portfolio may invest up to 30% of its Net Asset Value in China A Shares.
- It is the intention of the Sub-Investment Manager to invest a maximum of 50% of the Portfolio's Net Asset Value in Emerging Market Countries.
- The Portfolio may invest up to 10% of its Net Asset Value in REITs.
- The Portfolio may invest up to 10% of its Net Asset Value in recently issued securities.
- The Portfolio may not invest greater than 5% of its Net Asset Value in securities traded on Russian markets. Investment will only be made in securities that are listed/traded on the Moscow exchange.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

### **Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. Investors should read and consider the entire “*Investment Risks*” section of the Prospectus, in particular the risks identified in the “*Investment Risks*” section of this Supplement which are relevant to the Portfolio. In particular, investors should note that companies related to the Next Generation Space Economy may be subject to significant volatility in growth rates due to rapidly changing market conditions and/or participants, more advanced or new technologies, new competing products and/or enhancements in existing products. Investors should also be mindful of regulation risk as the Next Generation Space Economy continues to evolve. International regulations relating to space economy are developing to catch up with the technological advancement of space activities and are subject to changes. Investors should also be mindful of geopolitical risk associated with disagreements related to space treaties and operating environments. This is also a highly technical sector, making it heavily dependent on patents and intellectual property rights and/or licences. The profitability of companies related to the Next Generation Space Economy may be adversely impacted by the loss or impairment of these intellectual property assets. Such companies may also be subject to unpredictable changes in competition. There is no assurance that products or services offered by Next Generation Space Economy companies will not be rendered obsolete or be adversely affected by competing products, or that such companies will not be adversely affected by other challenges, such as instability, fluctuation, or an overall decline within the industry. As the Portfolio may hold a relatively small number of securities, investors should also consider the “*Concentration Risk*” sub-section of the “*Investment Risks*” section of the Prospectus, which may be relevant to the Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.

- The Sub-Investment Manager may use future foreign currency exchange contracts in order to hedge some currency risk.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.

**Environmental,  
Social and  
Governance  
("ESG")**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and only invests in those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG themed investing is a core component of the Sub-Investment Manager's strategy for the Portfolio. The Sub-Investment Manager applies the: (i) Global Standards Policy; (ii) Controversial Weapons Policy; (iii) Thermal Coal Involvement Policy; and (iv) the Sustainable Exclusion Policy, when determining what investments to make for the Portfolio. Further details on these screening/exclusion policies are set out in the "*Sustainable Investment Criteria*" section of the Prospectus.

The Sub-Investment Manager will manage the Portfolio in accordance with the ESG Policy on a continuous basis. The Sub-Investment Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process. A summary of the ESG Policy is detailed in Annex VI of the Prospectus and it is available on the Neuberger Berman website, [www.nb.com/esg](http://www.nb.com/esg).

In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager intends to have at least 90% of the Portfolio's Net Asset Value invested in companies with Science-Based Target initiative ("SBTi")<sup>1</sup> validated targets (or equivalent as assessed by Neuberger Berman's net-zero sector alignment methodology, which conforms with the IIGCC target setting guidance<sup>2</sup>) by 2030 and to reach 100% of the Portfolio's Net Asset Value by 2050. Additionally, the Portfolio must reduce its carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>3</sup>, by a minimum of 30% by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Further details on Neuberger Berman's commitment to the Net Zero Asset Manager Initiative are contained in the "*Sustainable Investment Criteria*" section of the Prospectus.

Evaluation of material ESG factors via the NB ESG Quotient is embedded in the investment decision-making process pre- and post-investment and is undertaken for companies within the initial investment universe, which the Sub-Investment Manager follows.

The Sub-Investment Manager also participates in direct engagement with select investee companies (e.g. face-to-face meetings, frequent phone contact with senior management, discussions with customers, suppliers and competitors and attendance at industry and company conferences). Engagement with investee companies is encouraged to mitigate risks and improve ESG and financial outcomes. It is not envisaged that the Sub-Investment Manager will set engagement Key Performance Indicators ("KPIs") for investee companies. The Sub-Investment Manager views this direct engagement, as an essential part of its investment process.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

<sup>1</sup> The SBTi is a partnership between CDP, the United Nations Global Compact, World Resources Institute and the World Wide Fund for Nature which enables companies to set science-based emissions reduction targets.

<sup>2</sup> The IIGCC created the Net Zero Investment Framework to assist asset owners and asset managers to develop net zero investment strategies or to fulfil the requirements of net zero commitments. The IIGCC's target setting guidance is a component of the Net Zero Investment Framework.

<sup>3</sup> Scope 1 emissions: are direct emissions from an issuer's owned or controlled sources (such as emissions created directly by the issuer's business processes or from vehicles owned by the issuer). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the issuer. Scope 3 emissions: are all other indirect emissions that occur in an issuer's value chain (such as emissions from products or services consumed by the issuer, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**Typical Investor Profile** The Portfolio may be suitable for investors seeking capital appreciation opportunities through equity investments exposed to long-term investment themes. Investors need to be comfortable with the risks associated with the Portfolio and be prepared to accept periods of market volatility particularly over short time periods. Investors are likely to have a medium to long-term investment horizon.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management Fee	Distribution Fee
A, X, Y	5.00%	1.70%	0.00%
B, C2, E	0.00%	1.70%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.85%	0.00%
M	2.00%	1.70%	0.80%
P	5.00%	0.81%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.28%	0.00%
Z	0.00%	0.00%	0.00%

For details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman Global Equity Megatrends Fund (the “Portfolio”)  
 Legal entity identifier: 549300NOKC884YXB6S20

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="radio"/> Yes	<input type="radio"/> <input checked="" type="radio"/> No
<input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective</b> : ____% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ____% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective</b> : ____%	<input checked="" type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b>

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses third party data and the NB ESG Quotient to promote the environmental and social characteristics listed below. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

Third party data and the NB ESG Quotient (as explained above) are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

N/A – the Portfolio does not commit to holding sustainable investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio does not commit to holding sustainable investments.

How have the indicators for adverse impacts on sustainability factors been taken into account?

N/A

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - the Portfolio does not commit to holding Taxonomy aligned investments.

## Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs. Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators, and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The Portfolio seeks to achieve long-term capital appreciation through investment in a portfolio of equity holdings that are exposed to global long-term themes. The Portfolio will seek to achieve its objective by investing primarily in equity securities that are listed or traded on Recognised Markets globally (as depicted in Annex I of the Prospectus and which may include Emerging Market Countries) and issued by companies across all market capitalisations and industrial sectors.

In seeking to achieve the Portfolio’s investment objective, the Sub-Investment Manager pursues the following investment process which is described in further detail below:

- Identifies secular themes (i.e. broad changes and trends affecting societies, economies and industries) that have the potential for long-term influence (e.g. the rising value of water).
- Undertakes qualitative business analysis to identify companies which operate within those identified themes: Conducts in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success.
- Undertakes quantitative screening: Screens for stocks that it believes have the potential for high return on equity and cash flow strength that stand to benefit from a particular theme.
- Transaction Discipline: Seeks companies that it believes have 50% - 100% capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the third party data and the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The third party or NB ESG Quotient rating for companies are utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio will focus investment in companies that are exposed to global long-term themes.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor third party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor third party or NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

- **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The “Other” section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the “Other” section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio’s mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for investment, hedging and/or efficient portfolio management, it will not use derivatives to promote environmental or social characteristics.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy Regulation are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager is not committing that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. As such, the minimum proportion of the Portfolio's investments that contribute to environmentally sustainable economic activities for the purposes of the EU Taxonomy will be 0%. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

Yes:

In fossil gas

In nuclear energy

No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A

**What is the minimum share of socially sustainable investments?**

N/A

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

● **How does the designated index differ from a relevant broad market index?**

N/A

● **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman Next Generation Mobility Fund (the “Portfolio”)  
**Legal entity identifier:** 5493000YD3J3W1CMMU74

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<p><input checked="" type="radio"/> <input type="radio"/> <b>Yes</b></p>	<p><input type="radio"/> <input checked="" type="radio"/> <b>No</b></p>
<p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective</b>: ____%</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective</b>: ____%</p>	<p><input checked="" type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, <b>it will have a minimum proportion of 10% of sustainable investments</b></p> <p style="margin-left: 20px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input checked="" type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses third party data and the NB ESG Quotient to promote the environmental and social characteristics listed below. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in

clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

Third party data and the NB ESG Quotient (as explained above) are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

### III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Neuberger Berman Sustainable Exclusion Policy and the Neuberger Berman Enhanced Sustainable Exclusion Policy are also applied when determining what investments to make for the Portfolio. Further details on these ESG exclusion policies are set out in the "Sustainable Investment Criteria" section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

#### ● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold sustainable investments which will aim to promote the environmental & social characteristics listed above.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB's sustainable investment framework. This framework includes an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Sub-Investment Manager utilises multiple datapoints that measure the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screens companies for controversies, significant harm and violations of minimum safeguards. If the companies pass this screen, the Sub-Investment Manager then proceeds to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Sustainable investments are more likely to have product/service revenue aligned with the SDGs.

While the sustainable investments may have a social or an environmental objective, the sustainable investments will not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Sub-Investment Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "How have the indicators for adverse impacts on sustainability factors been taken into account?" below) and violations of minimum safeguards (with respect to which see "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?" below). The Sub-Investment Manager also applies the ESG exclusion policies referenced above.

The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

The Sub-Investment Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view) in respect of the sustainable investments of the Portfolio, and may evolve with improving data quality and availability. The Sub-Investment Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fall below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the NB ESG exclusion policies detailed above, which includes consideration of several of the PAIs.

— — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio does not commit to holding Taxonomy aligned investments.

### Does this financial product consider principal adverse impacts on sustainability factors?

Yes, please see below

No

Yes. The Sub-Investment Manager considers PAIs with respect to the Portfolio in two ways:

1. All PAIs are considered when determining whether sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective as explained in “*How have the indicators for adverse impacts on sustainability factors been taken into account?*” above.

2. The Sub-Investment Manager will consider the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promote environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

See “*How have the indicators for adverse impacts on sustainability factors been taken into account?*” above for more details on how the PAIs are considered with respect to sustainable investments. With respect to the Product Level PAIs, the Sub-Investment Manager utilises third party data and proxy data along with internal research to consider them.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators, and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

## What investment strategy does this financial product follow?

The Portfolio seeks to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings, focusing on companies that are involved or derive benefit from Next Generation Mobility. The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (as depicted in Annex I of the Prospectus and which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

In seeking to achieve the Portfolio's investment objective, the Sub-Investment Manager pursues the following investment process to identify a universe of companies that offer exposure to Next Generation Mobility:

- **Qualitative business analysis:** to identify companies which operate within the long-term trend of the proliferation of autonomous, electric and connected vehicles ("Next Generation Mobility"), as well as companies that are well-positioned to benefit from the new business models related to Next Generation Mobility;
- **Quantitative screening:** to identify stocks that it believes may be too illiquid or have too small a market capitalisation;
- **Strategic valuation and analysis:** in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success; and
- **Security selection and portfolio construction:** Selects companies with the ability to provide solutions to drive Next Generation Mobility that it believes have 50% - 100% capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the third party data and the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The third party or NB ESG Quotient rating for companies are utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio will focus investment in companies that are involved in or derive benefit from Next Generation Mobility.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor third party or NB ESG Quotient rating with the aim to seek improvement in the

underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

## II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-investment Manager will seek to prioritise constructive engagement with companies which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor third party or NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

## III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

- ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

### What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding at least 10% sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for investment, hedging and/or efficient portfolio management it will not use derivatives to promote environmental or social characteristics.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy Regulation are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager is not committing that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. As such, the minimum proportion of the Portfolio's investments that contribute to environmentally sustainable economic activities for the purposes of the EU Taxonomy will be 0%. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
- In fossil gas       In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

While the Portfolio may invest in sustainable investments with an environmental objective, such sustainable investments may not be in Taxonomy-aligned investments as they may not satisfy the criteria for same.

**What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives.)

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

N/A

- ***How does the designated index differ from a relevant broad market index?***

N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Neuberger Berman 5G Connectivity Fund (the “Portfolio”)  
 Legal entity identifier: 549300H0HOXG52ES7840

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**
   **No**

<input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective: ___%</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective: ___%</b>	<input checked="" type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, <b>it will have a minimum proportion of 10% of sustainable investments</b> <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <input type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b>
---	---

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**What environmental and/or social characteristics are promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses third party data and the NB ESG Quotient to promote the environmental and social characteristics listed below. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

Third party data and the NB ESG Quotient (as explained above) are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Neuberger Berman Sustainable Exclusion Policy and the Neuberger Berman Enhanced Sustainable Exclusion Policy are also applied when determining what investments to make for the Portfolio. Further details on these ESG exclusion policies are set out in the "Sustainable Investment Criteria" section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold at least 10% sustainable investments which will aim to promote the environmental & social characteristics listed above.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB's sustainable investment framework. This framework includes an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Sub-Investment Manager utilises multiple datapoints that measure the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screens companies for controversies, significant harm and violations of minimum safeguards. If the companies pass this screen, the Sub-Investment Manager then proceeds to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Sustainable investments are more likely to have product/service revenue aligned with the SDGs.

While the sustainable investments may have a social or an environmental objective, the sustainable investments will not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Sub-Investment Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "How have the indicators for adverse impacts on sustainability factors been taken into account?" below) and violations of minimum safeguards (with respect to which see "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?" below). The Sub-Investment Manager also applies the ESG exclusion policies referenced above.

The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

The Sub-Investment Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view) in respect of the sustainable investments of the Portfolio, and may evolve with improving data quality and availability. The Sub-Investment Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fall below the quantitative and qualitative tolerance thresholds set for a PAI; and
- Application of the NB ESG exclusion policies detailed above, which includes consideration of several of the PAIs.

— — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the UNGC Principles, the ILO Standards and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio does not commit to holding Taxonomy aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

Yes. The Sub-Investment Manager considers PAIs with respect to the Portfolio in two ways:

1. All PAIs are considered when determining whether sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective as explained in “*How have the indicators for adverse impacts on sustainability factors been taken into account?*” above.
2. The Sub-Investment Manager will consider the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promote environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

See “*How have the indicators for adverse impacts on sustainability factors been taken into account?*” above for more details on how the PAIs are considered with respect to sustainable investments. With respect to the Product Level PAIs, the Sub-Investment Manager utilises third party data and proxy data along with internal research to consider them.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators, and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The Portfolio aims to achieve a target average return of 3-5% over the Benchmark, the MSCI All-Country World Index (ACWI) (Total Return, net of tax, USD), before fees over a market cycle (typically 3 years) from investing primarily in a portfolio of global equity holdings, focusing on companies that are involved or derive benefit from Next Generation Connectivity. The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (as depicted in Annex I of the Prospectus and which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

In seeking to achieve the Portfolio's investment objective, the Sub-Investment Manager pursues the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to the development and enhancement of mobile internet and 5G connectivity ("**Next Generation Connectivity**"):

- Qualitative business analysis: to identify companies which are key enablers of Next Generation Connectivity, as well as companies that are well-positioned to benefit from the new business models related to Next Generation Connectivity (for example, autonomous vehicles or smart home technology);
- Quantitative screening: to identify stocks that it believes may be too illiquid or have too small a market capitalisation;
- Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success which is determined by reference to existing financial data (e.g., market share data); and
- Security selection and portfolio construction: Selects companies with the ability to provide solutions to drive Next Generation Connectivity that it believes have 50% - 100% capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the third party data and the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

### ● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

#### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The third party or NB ESG Quotient rating for companies are utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio will focus investment in companies that drive Next Generation Connectivity.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor third party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

## II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with companies which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor third party or NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

## III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

- ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

### What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding at least 10% sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio .

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and

#### Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for investment, hedging and/or efficient portfolio management, it will not use derivatives to promote environmental or social characteristics.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy Regulation are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager is not committing that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. As such, the minimum proportion of the Portfolio's investments that contribute to environmentally sustainable economic activities for the purposes of the EU Taxonomy will be 0%. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

**What is the minimum share of investments in transitional and enabling activities?**

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

While the Portfolio may invest in sustainable investments with an environmental objective, such sustainable investments may not be in Taxonomy-aligned investments as they may not satisfy the criteria for same.

**What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

- **How does the designated index differ from a relevant broad market index?**

N/A

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

### **Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

### **More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman InnovAsia 5G Fund (the “Portfolio”)  
**Legal entity identifier:** 549300VMISY5R7FEHX25

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>	<input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective: ____%</b>	<input checked="" type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, <b>it will have a minimum proportion of 10% of sustainable investments</b>
<input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy	<input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	<input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
<input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective: ____%</b>	<input checked="" type="checkbox"/> with a social objective
<input type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b>	

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses third party data and the NB ESG Quotient to promote the environmental and social characteristics listed below. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in

clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

Third party data and the NB ESG Quotient (as explained above) are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

### III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Neuberger Berman Sustainable Exclusion Policy and the Neuberger Berman Enhanced Sustainable Exclusion Policy are also applied when determining what investments to make for the Portfolio. Further details on these ESG exclusion policies are set out in the "Sustainable Investment Criteria" section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

#### ● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold sustainable investments which will aim to promote the environmental & social characteristics listed above.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB's sustainable investment framework. This framework includes an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of an issuers' overall governance score to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Sub-Investment Manager utilises multiple datapoints that measure the alignment of a company's economic activity with environmental or social characteristics.

The Sub-Investment Manager screens companies for controversies, significant harm and violations of minimum safeguards. If the companies pass this screen, the Sub-Investment Manager then proceeds to measure the companies' environmental or social economic contribution.

The Sub-Investment Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Sustainable investments are more likely to have product/service revenue aligned with the SDGs.

While the sustainable investments may have a social or an environmental objective, the sustainable investments will not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Sub-Investment Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "How have the indicators for adverse impacts on sustainability factors been taken into account?" below) and violations of minimum safeguards (with respect to which see "How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?" below). The Sub-Investment Manager also applies the ESG exclusion policies referenced above.

The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-Investment Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view) in respect of the sustainable investments of the Portfolio, and may evolve with improving data quality and availability. The Sub-Investment Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives with companies which fall below the quantitative and qualitative tolerance thresholds set for a PAI; and

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – the Portfolio does not commit to holding Taxonomy aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

Yes. The Sub-Investment Manager considers PAIs with respect to the Portfolio in two ways:

1. All PAIs are considered when determining whether sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective as explained in *“How have the indicators for adverse impacts on sustainability factors been taken into account?”* above.
2. The Sub-Investment Manager will consider the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promote environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the **“Product Level PAIs”**).

See *“How have the indicators for adverse impacts on sustainability factors been taken into account?”* above for more details on how the PAIs are considered with respect to sustainable investments. With respect to the Product Level PAIs, the Sub-Investment Manager utilises third party data and proxy data along with internal research to consider them.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in more granular data coverage on the Product Level PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators, and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and

- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The Portfolio aims to invest primarily in a portfolio of equity holdings, focusing on companies that are involved or derive benefit from Innovative Technologies.

The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (as depicted in Annex I of the Prospectus and which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors with innovative technologies or business models that:

- are incorporated or organized under the laws of a country in Asia, or that have a principal office in Asia;
- generally derive a majority of their incremental growth from (a) goods that are produced or sold, (b) investments made, or (c) services performed, in Asia: or
- generally hold a majority of their assets in Asia.

The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

In seeking to achieve the Portfolio's investment objective, the Sub-Investment Manager pursues the following investment process (which is described in further detail below) to identify a universe of companies that offer exposure to disruptive technologies, innovative business models with a relatively low penetration rate in Asia or which are in a relatively early growth phase as well as long-term, structural trends and themes such as 5G / internet of things, (including but not limited to data infrastructure, connected devices or advanced semiconductors), digital lifestyle (including but not limited to healthcare, education or internet and consumer) and industrial innovations (including but not limited to robotics, clean tech or smart logistics) ("**Innovative Technologies**"):

- Qualitative business analysis: to identify companies which are key enablers of Innovative Technologies, as well as companies that are well-positioned to benefit from new business models related to Innovative Technologies;
- Quantitative screening: to identify stocks that the Sub-Investment Manager believes may be too illiquid or have too small a market capitalisation;
- Strategic valuation and analysis: in-depth research and analysis of companies, including of company/business models, quality of management, competitive strength and record of success which is determined by reference to existing financial data (eg, market share data); and
- Security selection and portfolio construction: Selects companies with the ability to provide solutions to drive Innovative Technologies that the Sub-Investment Manager believes have significant capital appreciation potential over three to five years and determine entry and exit price targets based on current market prices for the securities and the preceding analysis, that guide buy and sell decisions.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the third party data and the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The third party or NB ESG Quotient rating for companies are utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio will focus investment in companies that are involved in or derive benefit from Innovative Technologies.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor third party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with companies which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor third party or NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

- **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

- **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for investment, hedging and/or efficient portfolio management, it will not use derivatives to promote environmental or social characteristics.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy Regulation are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager is not committing that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. As such, the minimum proportion of the Portfolio's investments that contribute to environmentally sustainable economic activities for the purposes of the EU Taxonomy will be 0%. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas       In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

While the Portfolio may invest in sustainable investments with an environmental objective, such sustainable investments may not be in Taxonomy-aligned investments as they may not satisfy the criteria for same.

**What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives.)

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio’s benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

N/A

- ***How does the designated index differ from a relevant broad market index?***

N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman Next Generation Space Economy Fund (the "Portfolio")  
**Legal entity identifier:** 549300FT24ZYHNJCVO63

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<p><input checked="" type="radio"/> <input type="radio"/> <b>Yes</b></p>	<p><input type="radio"/> <input checked="" type="radio"/> <b>No</b></p>
<p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective</b>: ____%</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective</b>: ____%</p>	<p><input checked="" type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, <b>it will have a minimum proportion of 10% of sustainable investments</b></p> <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input checked="" type="checkbox"/> with a social objective</li> </ul> <p><input type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the "NB ESG Quotient"). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman ("NB") materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses third party data and the NB ESG Quotient to promote the environmental and social characteristics listed below Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“GHG”) emissions; opportunities in clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager will promote the reduction of the Portfolio’s carbon footprint across scope 1, 2, and material scope 3 GHG emissions<sup>1</sup>.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio’s mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

- The NB ESG Quotient:

Third party data and the NB ESG Quotient (as explained above) are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager’s analyst team’s significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

<sup>1</sup> Scope 1 emissions: are direct emissions from a company’s owned or controlled sources (such as emissions created directly by the company’s business processes or from vehicles owned by the company). Scope 2 emissions: are indirect emissions from the generation of electricity, steam, heating and cooling consumed by the company. Scope 3 emissions: are all other indirect emissions that occur in a company’s value chain (such as emissions from products or services consumed by the company, disposal of its waste, employee commuting, distribution and transport of its products or its investments).

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

- Climate Value-at-Risk:

Climate Value-at-Risk (“**CVaR**”) measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager’s portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

- ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Neuberger Berman Sustainable Exclusion Policy is also applied when determining what investments to make for the Portfolio. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio’s mandatory periodic report (as per the requirements of Article 11 of SFDR).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

While the Portfolio promotes environmental and social characteristics, this Portfolio does not have a sustainable investment objective. However, the Portfolio will hold sustainable investments which will aim to promote the environmental & social characteristics listed above and will aim to contribute to the Portfolio’s net zero goal, as detailed below.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient. Both the sustainable and non-sustainable investments held by the Portfolio will apply the NB ESG Quotient, as detailed above.

The consideration of investments made by the Portfolio as sustainable investments is determined by reference to NB’s sustainable investment framework. This framework includes an assessment as to (i) whether the investment contributes to an environmental and/or social objective, (ii) whether the investment causes significant harm to those objectives as described below, and (iii) an assessment of an issuers’ overall governance score to determine whether the issuer passes a good governance assessment. Under this sustainable investment framework, the Sub-Investment Manager utilises multiple datapoints that measure the alignment of a company’s economic activity with environmental or social characteristics.

The Sub-Investment Manager screens companies for controversies, significant harm and violations of minimum safeguards. If the companies pass this screen, the Sub-Investment Manager then proceeds to measure the companies’ environmental or social economic contribution.

The Sub-Investment Manager measures this in two ways:

- Revenue alignment to the EU taxonomy (if any); and
- Revenue alignment to the Sustainable Development Goals ("SDGs").

Sustainable investments are more likely to have product/service revenue aligned with the SDGs.

Both the sustainable and non-sustainable investments held by the Portfolio will target net zero alignment by 2050, however the sustainable investments portion of the Portfolio would be expected to contribute to reducing the Portfolio's carbon footprint.

While the sustainable investments may have a social or an environmental objective, the sustainable investments will not qualify as environmentally sustainable investments (or Taxonomy aligned investments) as defined under the EU Taxonomy.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

As part of the Sub-Investment Manager's sustainable investment framework, investments that cause significant harm to environmental or social objectives are excluded. To determine whether an investment causes significant harm, the Sub-Investment Manager considers significant harm with reference to certain principal adverse impact indicators (with respect to this see the "*How have the indicators for adverse impacts on sustainability factors been taken into account?*" below) and violations of minimum safeguards (with respect to which see "*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?*" below). The Sub-Investment Manager also applies the ESG exclusion policies referenced above.

The combination of all of these factors generates a quantitative validation for "sustainability" which can be used to ensure the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable objective.

— — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

The Sub-Investment Manager will consider the following principal adverse impacts indicators when determining whether the sustainable investments that the Portfolio intends to make, do not cause significant harm to any environmental or social sustainable investment objective: GHG emissions; carbon footprint; GHG intensity of investee companies; exposure to companies active in the fossil fuel sector; share of non-renewable energy consumption and production; energy consumption intensity per high impact climate sector; activities negatively affecting biodiversity-sensitive areas; emissions to water; hazardous waste and radioactive waste ratio; violations of the UNGC Principles and the OECD Guidelines; lack of processes and compliance mechanisms to monitor compliance with the UNGC Principles and the OECD Guidelines; unadjusted gender pay gap, board gender diversity; and exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (the "PAIs").

Consideration of the above PAIs is limited by the availability of adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view) in respect of the sustainable investments of the Portfolio, and may evolve with improving data quality and availability. The Sub-Investment Manager will utilise third party data and proxy data along with internal research to consider the PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

Consideration of the PAIs by the Sub-Investment Manager, when determining whether the sustainable investments that the Portfolio intends to make do not cause significant

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

harm to any environmental or social sustainable investment objective of the Portfolio's sustainable investments, will be through a combination of:

- Monitoring companies which fall below the quantitative and qualitative tolerance thresholds set for each PAI by the Sub-Investment Manager;

- Stewardship and/or setting engagement objectives with companies which fall *The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

and the UNCTDs, captured through the Newberger-Bernhart Global Standards Policy.

N/A – the Portfolio does not commit to holding Taxonomy aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

Yes. The Sub-Investment Manager considers PAIs with respect to the Portfolio in two ways:

1. All PAIs are considered when determining whether sustainable investments that the Portfolio intends to make do not cause significant harm to any environmental or social sustainable investment objective as explained in "How have the indicators for adverse impacts on sustainability factors been taken into account?" above.
2. The Sub-Investment Manager will consider the following principal adverse impacts on sustainability factors with respect to those investments within the Portfolio which promote environmental or social characteristics, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the "Product Level PAIs").

See "How have the indicators for adverse impacts on sustainability factors been taken into account?" above for more details on how the PAIs are considered with respect to sustainable investments.

With respect to the Product Level PAIs, the Sub-Investment Manager utilises third party data and proxy data along with internal research to consider them.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select investee companies asking for direct disclosure on the PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and to gather wider and more granular data coverage on the PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators, and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until

such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

### **What investment strategy does this financial product follow?**

The Portfolio seeks to achieve long-term capital appreciation through investing primarily in a portfolio of global equity holdings that are involved in or derive benefit from the Next Generation Space Economy. The Portfolio will seek to achieve its objective by primarily investing in equity securities that are listed or traded on Recognised Markets globally (which may include Emerging Market Countries) and issued by companies across all market capitalisations and economic sectors. The Portfolio may invest in companies of any market capitalisation but shall typically invest in companies that have market capitalisation greater than USD 500 million at time of purchase.

In aiming to align the Portfolio with a net-zero goal, the Sub-Investment Manager intends to have at least 90% of the Portfolio's Net Asset Value invested in companies with Science-Based Target initiative ("SBTi")<sup>2</sup> validated targets (or equivalent as assessed by Neuberger Berman's net-zero sector alignment methodology, which conforms with the Institutional Investors Group on Climate Change ("IIGCC")<sup>3</sup> target setting guidance) by 2030 and to reach 100% of the Portfolio's Net Asset Value by 2050. Additionally, the Portfolio must reduce its carbon footprint across scope 1, 2, and material scope 3 GHG emissions, by a minimum of 30% by 2030 relative to a 2019 baseline and a subsequent decline to net zero by 2050. The 2019 baseline may be subject to re-calculation as data quality and disclosure expands over time, particularly with respect to scope 3 emissions. Further details on Neuberger Berman's commitment to the Net Zero Asset Managers Initiative are contained in the "Sustainable Investment Criteria" section of the Prospectus.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the third party data and the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient or third party rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance such as revenue/earnings before interest, tax, depreciation, and amortisation ("EBITDA") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

- ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

<sup>2</sup> The SBTi is a partnership between CDP, the United Nations Global Compact, World Resources Institute and the World Wide Fund for Nature which enables companies to set science-based emissions reduction targets.

<sup>3</sup> IIGCC target setting guidance: is a framework for investors to achieve net zero emissions alignment issued by the Institutional Investors Group on Climate Change.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The third party or NB ESG Quotient rating for companies are utilised to help to better identify risks and opportunities in the overall assessment of a company, noting that the Portfolio will focus investment in companies that are involved in or derive benefit from the Next Generation Space Economy.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall thematic and company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor third party or NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with companies which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor third party or NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio commits to holding at least 10% sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

**Asset allocation** describes the share of investments in specific assets.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for investment, hedging and/or efficient portfolio management it will not use derivatives to promote environmental or social characteristics.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>4</sup>**

- Yes:
  - In fossil gas       In nuclear energy
- No

<sup>4</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure**

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

N/A – the Portfolio does not commit to holding Taxonomy-aligned investments.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives).

While the Portfolio may invest in sustainable investments with an environmental objective, such sustainable investments may not be in Taxonomy-aligned investments as they may not satisfy the criteria for same.

**What is the minimum share of socially sustainable investments?**

The Portfolio's sustainable investments will have an environmental objective and/or a social objective. This means that at any specific point in time, all of the Portfolio's sustainable investments could have social objectives (which means that 0% of the Portfolio's sustainable investments would have environmental objectives); or all of the Portfolio's sustainable investments could have environmental objectives (which means that 0% of the Portfolio's sustainable investments would have social objectives.)

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***

N/A

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

N/A

- ***How does the designated index differ from a relevant broad market index?***

N/A

- ***Where can the methodology used for the calculation of the designated index be found?***

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

The Directors of the Company whose names appear in the “*Management and Administration*” section of the Prospectus accept responsibility for the information contained in this document. To the best of the knowledge and belief of the Directors (who have taken all reasonable care to ensure that such is the case) the information contained in this document is in accordance with the facts and does not omit anything likely to affect the importance of such information. The Directors accept responsibility accordingly.

# NEUBERGER BERMAN INVESTMENT FUNDS PLC

(An investment company with variable capital constituted as an umbrella fund with segregated liability between sub-funds under the laws of Ireland and authorised by the Central Bank of Ireland pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, as amended)

## US EQUITY SUPPLEMENT 6 DECEMBER 2023

This document forms part of, and should be read in the context of and together with, the prospectus dated 6 December 2023 as may be amended from time to time (the “Prospectus”) in relation to Neuberger Berman Investment Funds plc (the “Company”) and contains information relating to the following sub-funds, each of which is a separate portfolio of the Company:

**NEUBERGER BERMAN US SMALL CAP FUND**

**NEUBERGER BERMAN US MULTI CAP OPPORTUNITIES FUND**

**NEUBERGER BERMAN US SMALL CAP INTRINSIC VALUE FUND**

**NEUBERGER BERMAN US EQUITY FUND**

**NEUBERGER BERMAN US LARGE CAP VALUE FUND**

(the “Portfolios”)

To the extent there is any inconsistency between the Prospectus and this Supplement with respect to the Portfolios, this Supplement shall prevail. Each SFDR Annex (as defined herein) has been prepared in accordance with the requirements of SFDR and contains additional information pertaining to the relevant Article 8 Portfolio in accordance with SFDR. Each SFDR Annex forms part of and should be read in conjunction with the Supplement. In the event of any inconsistency between the terms of an SFDR Annex and the terms of the Supplement with regard to disclosure pertaining to SFDR for an Article 8 Portfolio, the SFDR Annex shall prevail.

## Definitions

In this Supplement the following words and phrases shall have the meanings indicated below:

<b>Business Day</b>	with respect to each Portfolio, a day (except Saturday or Sunday) on which the relevant financial markets in London and New York are open for business;
<b>Dealing Day</b>	each Business Day or such other day or days as the Directors may determine and notify to the Administrator and to Shareholders in advance, provided there shall be at least two (2) Dealing Days per month in each Portfolio;
<b>Dealing Deadline</b>	3.00 pm (Irish time) on the relevant Dealing Day in respect of each Portfolio. In exceptional circumstances, a director of either the Company or the Manager may authorise the acceptance of a subscription or redemption application, up to 4.30 pm (Irish time) on the relevant Dealing Day;
<b>Net Asset Value Calculation Time</b>	10.00 pm (Irish time) on the relevant Dealing Day or such other time as the Directors may determine in respect of a Portfolio;
<b>Portfolios</b>	the Neuberger Berman US Small Cap Fund, the Neuberger Berman US Multi Cap Opportunities Fund, the Neuberger Berman US Small Cap Intrinsic Value Fund, the Neuberger Berman US Equity Fund and the Neuberger Berman US Large Cap Value Fund;
<b>SFDR Annex</b>	each annex hereof setting out the pre-contractual disclosures template with respect to an Article 8 Portfolio, prepared in accordance with the requirements of Article 8 of SFDR; and
<b>Sub-Investment Manager</b>	Neuberger Berman Europe Limited and Neuberger Berman Investment Advisers LLC or such other company as may be appointed by the Manager from time to time in respect of a Portfolio, with the prior approval of the Company and the Central Bank.

## Investment Risks

Investment in the Portfolios carries certain risks, which are described in the “*Investment Risks*” section of the Prospectus and in the “Risk” section of the information specific to each Portfolio, as included in this Supplement. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

There can be no assurance that the Portfolios will achieve their respective objectives. While there are some risks described below that may be common to a number or all of the Portfolios, there may also be specific risk considerations which apply only to particular Portfolios.

## Distribution Policy

Under normal circumstances, the Directors intend that dividends in respect of:

- each of the (Monthly) Distributing Classes in the Portfolios shall be declared on or prior to the last Business Day of each month and paid within three Business Days thereafter; and
- each of the other Distributing Classes in the Portfolios will be declared on an annual basis and paid within 30 Business Days thereafter.

## Subscriptions and Redemptions

Subscriptions for Shares in all Classes of each Portfolio which have not already launched at the date of this Supplement will be considered during the Initial Offer Period, upon receipt by the Administrator of completed share applications and subscription monies as specified in the “*Subscriptions*” section of the Prospectus. Such Shares will be issued at the Initial Offer Price on the last day of the Initial Offer Period.

The Initial Offer Period shall run from 9.00 am on 7 December 2023 to 5.00 pm on 7 June 2024 or such earlier or later time as the Directors may determine at their discretion and notify to the Central Bank and to subscribers.

Except as provided below, the Initial Offer Price for each of the share classes shall be as follows:

AUD Classes: AUD 10	DKK Classes: DKK 50	NOK Classes: NOK 100
BRL Classes: BRL 20	EUR Classes: EUR 10	NZD Classes: NZD 10
CAD Classes: CAD 10	GBP Classes: GBP 10	SEK Classes: SEK 100
CHF Classes: CHF 10	HKD Classes: HKD 10	SGD Classes: SGD 20
CLP Classes: CLP 5,000	ILS Classes: ILS 30	USD Classes: USD 10
CNY Classes: CNY 100	JPY Classes: JPY 1,000	ZAR Classes: ZAR 100

Thereafter and, in the case of Classes which have already launched, from the date of this Supplement, Shares will be issued at their Net Asset Value per Share, subject to the provision for Duties and Charges in respect of the issue of the Shares and rounding as provided for in the Articles on each Dealing Day.

The Company reserves the right to apply to Euronext Dublin to have the Shares in each of the Classes admitted to the Official List and to trading on the regulated market of Euronext Dublin.

The Company may, in its sole discretion, reject any subscription in whole or in part without reason.

As stated in the “*Subscriptions and Redemptions*” section of the Prospectus, redemption proceeds in respect of the Portfolios will be paid within ten (10) Business Days of the relevant Dealing Day unless payment has been suspended in the circumstances described in the “*Temporary Suspension of Dealings*” section of the Prospectus, although the Company will seek to make such payments within a shorter period of time where possible (up to and including within three (3) Business Days of the relevant Dealing Day).

## Neuberger Berman US Small Cap Fund

**The Portfolio will not use FDI extensively or primarily for investment purposes.**

<b>Investment Objective</b>	Achieve capital growth through the selection of investments applying analysis of company key metrics and macro economic factors.
<b>Investment Approach</b>	<p>The Portfolio will primarily invest in equity securities issued by small-capitalisation companies which have either their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on Recognised Markets.</p> <p>The Sub-Investment Manager generally considers small-capitalisation companies to be those with a total market capitalisation within the market capitalisation range of companies in the Benchmark (as specified in the “<i>Benchmark</i>” section below), at the time of initial purchase. The Portfolio may continue to hold or add to a position in corporations even after their market capitalisations have grown outside of the range of the Benchmark</p> <p>The Sub-Investment Manager seeks to identify undervalued companies whose current market share and balance sheet are strong and whose financial strength is largely based on existing business lines rather than on projected growth. Factors in identifying such companies include:</p> <ul style="list-style-type: none"> <li>• above-average returns;</li> <li>• an established market niche;</li> <li>• circumstances that may make it difficult for new competitors to enter the market;</li> <li>• an ability to finance their own growth; and</li> <li>• sound future business prospects.</li> </ul> <p>This approach is intended to let the Portfolio benefit from potential increases in stock prices, while reducing the risks typically associated with small-capitalisation stocks.</p> <p>The Sub-Investment Manager follows a disciplined selling strategy and will consider disposing of an investment where:</p> <ul style="list-style-type: none"> <li>• the company’s stock price reaches a target price;</li> <li>• the company’s business fails to perform as expected; or</li> <li>• other investment opportunities offer a more favourable return.</li> </ul> <p>The Portfolio is actively managed and does not intend to track the Benchmark, which is included here for performance comparison purposes and because the Portfolio will use the Benchmark as a universe from which it will select the investments that it makes in accordance with its investment objective and policies. The Portfolio may not hold all or many of the Benchmark’s components.</p>
<b>Benchmark</b>	<p>The Russell 2000 Index (Total Return, Net of Tax, USD) which is an unmanaged index comprised of the stock prices of 2000 small US companies and measures the market of smaller capitalised US stocks.</p> <p>Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.</p>
<b>Base Currency</b>	US Dollars (USD).
<b>Instruments / Asset Classes</b>	<p>The Portfolio will invest primarily in equity securities. The Portfolio can invest in or be exposed to the following types of assets.</p> <p><b>Equity and Equity-linked Securities.</b> These securities may include, without limitation, common stock, preferred stock etc. issued by small-capitalisation companies that have their head office or exercise an overriding part of their economic activity in the US and are listed or traded on Recognised Markets. Additionally, the Portfolio may also invest in equity securities</p>

issued by non-US small-capitalisation companies; although such investments will generally not exceed 10% of the Portfolio's Net Asset Value.

**Collective Investment Schemes.** The Portfolio may invest in eligible collective investment schemes, including ETFs, although such investments will generally not exceed 5% of Net Asset Value. ETFs are investment companies whose shares are bought and sold on a securities exchange. ETFs invest in a portfolio of securities designed to track a particular market segment or index, in this case equity markets. The ETFs will be located and listed in Relevant Jurisdictions. The ETFs and other collective investment schemes will predominately represent investments that are similar to the Fund's other investments. The ETFs will operate on the principle of risk spreading and will not be leveraged.

**Money Market Instruments.** Subject to a maximum of 10% of Net Asset Value, the Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under "*Collective Investment Schemes*" above, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

#### Investment Restrictions

- The Portfolio will not invest in securities that are issued or guaranteed by a single sovereign issuer that are below investment grade.
- A maximum of 20% of the Portfolio's Net Asset Value may be invested in a single industry.
- A maximum of 5% of the Portfolio's Net Asset Value may be invested in a single issuer.
- The Portfolio will not utilise total return swaps, securities lending or margin lending.

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the "*Investment Risks*" section of the Prospectus. While investors should read and consider the entire "*Investment Risks*" section of the Prospectus, the "*Small Cap Risk*", which is contained within the "*Market Risks*" section, is particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.
- The Sub-Investment Manager will use forward currency contracts in order to hedge currency risk.
- The Portfolio will seek to reduce risk by diversifying among many companies and industries and, at times, may place emphasis on certain sectors that could benefit from potential increases in stock price.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.

#### Environmental, Social and Governance ("ESG")

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are systematically considered in the selection of securities to be

constituents of the Portfolio. The Sub-Investment Manager assesses securities in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

The Portfolio will not purchase securities of companies that manufacture firearms. The Portfolio will not purchase securities of companies that derive 5% or more of their revenue from tobacco, gambling or adult entertainment.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### Typical Investor Profile

The Portfolio may be suitable for investors who are prepared to accept the risks of investing in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US.

#### Fees and Expenses

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee
A, X, Y	5.00%	1.70%	0.00%
B, C1, C2, E	0.00%	1.80%	1.00%
C	0.00%	1.10%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.85%	0.00%
M	2.00%	1.70%	1.00%
P	5.00%	0.81%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.25%	0.00%
Z	0.00%	0.00%	0.00%

For the details of the Administration Fees payable by the Portfolio, please see the “Administration Fees” heading in the “Fees and Expenses” section of the Prospectus.

#### Contingent deferred sales charges

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
B	4%	3%	2%	1%	0%
C, C1	1%	0%	0%	0%	0%
C2	2%	1%	0%	0%	0%
E	3%	2%	1%	0%	0%

Notwithstanding the information set out under the “Classes” section within “Annex II – Share Class Information” to the Prospectus, please note that, subject to any transitional period or other arrangement agreed with Shareholders in the relevant Classes, Shares in the Category B, C2 and E Classes will automatically convert into Shares in the corresponding T Class, at no additional cost to holders of such Shares, upon the expiry of four years (Category B Classes), two years (Category C2 Classes) and three years (Category E Classes) from the date of the initial subscription into the relevant B, C2 or E Class.

**Other important information for investors in Hong Kong**

As the Portfolio has been authorised for public offer in Hong Kong, the Hong Kong Securities and Futures Commission (“HKSF”) requires the Company to classify the Portfolio on the basis of its expected maximum net derivative exposure (“NDE”). The HKSF requires the NDE to be calculated in accordance with the HKSF’s Code on Unit Trusts and Mutual Funds and the requirements and guidance issued by the HKSF, which may be updated from time to time. This requires the Company to convert all FDI acquired for investment purposes that would generate incremental leverage at the portfolio level of the Portfolio into their equivalent positions in the underlying assets. Applying these requirements, the Portfolio’s NDE is expected to be less than 50% but the actual level may be higher than the expected level in exceptional circumstances, for example when there are sudden movements in markets and/or investment prices.

For the avoidance of doubt, complying with the HKSF’s requirements to classify the Portfolio on the basis of its NDE does not amend the investment objectives or policies or otherwise impact the management of the Portfolio or its use of FDI, as the requirements are solely to measure the Portfolio’s expected use of FDI, as described above, using the HKSF’s methodology and disclose the results.

## Neuberger Berman US Multi Cap Opportunities Fund

**The Portfolio will not use FDI extensively or primarily for investment purposes.**

<b>Investment Objective</b>	Achieve capital growth through the selection of investments using systematic, sequential research.
<b>Investment Approach</b>	<p>The Portfolio will seek to achieve its objective primarily by investing in a portfolio, consisting mainly of equity and equity-linked securities, listed or traded on Recognised Markets in the US and related securities and American Depositary Receipts (ADRs) that are selected using a fundamental, bottom-up research approach. The Portfolio may hold stocks of companies of any market capitalisation and in any economic sector.</p> <p>The Portfolio may also, but to a lesser extent invest in equity related derivatives which are listed or traded on Markets in the US described in the "Instruments/Asset Classes" section.</p> <p>The Sub-Investment Manager's portfolio construction consists of analysing three distinct types of investment categories:</p> <ul style="list-style-type: none"> <li>• Special situation investments. Special situation investments have unique attributes (e.g.,restructurings, spin-offs, post-bankruptcy equities) that require specific methodologies and customised investment research to be carried out by the Sub-Investment Manager;</li> <li>• Opportunistic investments. Opportunistic investments are companies that have become inexpensive for a tangible reason that the Sub-Investment Manager believes is temporary; and</li> <li>• Classic investments. Classic investments are those companies with long histories of shareholder-friendly policies, high-quality management teams and consistent operating performance.</li> </ul> <p>As noted above, the Sub-Investment Manager performs both quantitative and qualitative analysis in an effort to identify companies that it believes have the potential to increase in value. This potential may be realised in many ways, some of which include: free cash flow generation, product or process enhancements, margin increases, and improved capital structure management. Investments are selected by the Sub-Investment Manager primarily based on fundamental analysis of issuers and their potential in light of their financial condition, industry position, market opportunities, senior management teams and any special situations as well as any relevant economic, political and regulatory factors.</p> <p>The Sub-Investment Manager employs disciplined valuation criteria and price limits to determine when to buy or sell a stock. The valuation criteria and price limits will change over time as a result of changes in company-specific, industry and market factors. The Sub-Investment Manager follows a disciplined selling strategy and may sell a stock when it reaches a price target, when other opportunities appear more attractive, or when the Sub-Investment Manager's research indicates deteriorating fundamentals.</p> <p>Although the Portfolio invests primarily in assets in equity and equity-linked securities issued by companies that are listed or traded on Recognised Markets located in the US, it may also invest on an ancillary basis in stocks of companies that are listed or traded on Recognised Markets outside of the US.</p> <p>While the Portfolio has no specific sector concentration, the Sub-Investment Manager may emphasise certain sectors that the Sub-Investment Manager believes will benefit from market or economic trends at times.</p> <p>The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. The Portfolio gives some consideration to the Benchmark constituents in the selection of securities and may not hold all or many of the Benchmark's components.</p>
<b>Benchmark</b>	The S&P 500 Index (Total Return, Net of Tax, USD) which is a capitalisation weighted index of 500 stocks is designed to measure performance of the broad economy of the US through changes in the aggregate market value of 500 stocks representing all major industries.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

<b>Base Currency</b>	US Dollars (USD).
<b>Instruments / Asset Classes</b>	<p>The Portfolio will invest the majority of its assets in equity securities issued by US companies that are listed or traded on Recognised Markets, primarily located in the US. The Portfolio can invest in or be exposed to the following types of assets:</p> <p><b>Equity and Equity-linked Securities.</b> These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock and American, European and Global Depository Receipts, which are securities issued by a financial institution which evidence ownership interests in a security or a pool of securities deposited with the financial institution.</p> <p><b>Equity Real Estate Investment Trusts ("REITs").</b> REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. The REITs in which the Portfolio will invest may be based globally but predominantly in the US and will give exposure to underlying properties located globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.</p> <p><b>Financial Derivative Instruments ("FDI").</b> FDI will be used for investment, hedging and/or efficient portfolio management and subject to the conditions and limits imposed by the Central Bank as set out in the Prospectus and this Supplement:</p> <ul style="list-style-type: none"> <li>• Warrants may be used to take exposure to the type of equity securities described above.</li> <li>• Single stock options may be used to take exposure to equity securities of the type described above and UCITS eligible index options may be used to achieve a profit as well as to hedge or efficiently manage some portions or all of the Portfolio. Call and Put options may be purchased or sold (written) and will generally be short in duration (6 months or less), and will be less than 5% of the Portfolio's Net Asset Value on a delta-adjusted basis.</li> <li>• Forward currency contracts may be used to achieve a profit through gaining exposure to an increase in the value of currencies, as well as to hedge existing long currency exposures.</li> </ul> <p><b>Money Market Instruments.</b> The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills) that are rated as investment grade or below by Recognised Rating Agencies or are unrated.</p> <p>Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".</p> <p><b>Repo Contracts.</b> Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.</p>
<b>Investment Restrictions</b>	<ul style="list-style-type: none"> <li>• The Sub-Investment Manager's investment in equity options will not exceed 5% of the Portfolio's Net Asset Value on a delta-adjusted basis.</li> <li>• The Portfolio will not utilise total return swaps, securities lending or margin lending.</li> </ul>
<b>Risk</b>	<ul style="list-style-type: none"> <li>• Investment in the Portfolio carries certain risks which are described in greater detail in the "Investment Risks" section of the Prospectus. Investors should read and consider the entire "Investment Risks" section of the Prospectus. <b>These risks are not</b></li> </ul>

**purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**

- Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.
- The Sub-Investment Manager will use forward currency contracts in order to hedge currency risk.
- The Portfolio will seek to reduce risk by diversifying among many companies and industries.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.

#### **Environmental, Social and Governance ("ESG")**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are systematically considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager assesses securities in relation to their exposure to and the management of ESG risks. ESG represents governance (being the way in which the company is run), environmental issues (such as the impact on natural resources), and social issues (such as human rights).

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

#### **Typical Investor Profile**

The Portfolio may be suitable for an investor seeking long term capital appreciation over a mid-to-long term horizon. The investor should be prepared to accept periods of market volatility and the risks of the stock market in pursuit of long term goals.

#### **Fees and Expenses**

<b>Category</b>	<b>Maximum Initial Charge</b>	<b>Maximum Management fee</b>	<b>Distribution Fee</b>
A, X, Y	5.00%	1.70%	0.00%
B, C1, C2, E	0.00%	1.80%	1.00%
C	0.00%	1.10%	1.00%
D, I, I1, I2, I3, I4, I5	0.00%	0.85%	0.00%
M	2.00%	1.70%	1.00%
P	5.00%	0.81%	0.00%
T	5.00%	1.80%	0.00%
U	3.00%	1.25%	0.00%
Z	0.00%	0.00%	0.00%

For the details of the Administration Fees payable by the Portfolio, please see the "Administration Fees" heading in the "Fees and Expenses" section of the Prospectus.

#### **Contingent deferred sales charges**

Contingent deferred sales charges will be payable in respect of the following Classes at the rates specified below, depending on the period that has elapsed since the issue of the Shares being redeemed and will be charged on the lower of the Net Asset Value per Share on the relevant Dealing Day in respect of which the relevant Shares

were (i) initially subscribed or (ii) redeemed. Any such contingent deferred sales charges will be paid to the relevant Distributor, the Manager or to the Sub-Investment Manager.

Class	Redemption Period in Calendar Days				
	< 365	365 - 729	730 - 1094	1095 – 1459	> 1459
<b>B</b>	4%	3%	2%	1%	0%
<b>C, C1</b>	1%	0%	0%	0%	0%
<b>C2</b>	2%	1%	0%	0%	0%
<b>E</b>	3%	2%	1%	0%	0%

Notwithstanding the information set out under the “Classes” section within “Annex II – Share Class Information” to the Prospectus, please note that, subject to any transitional period or other arrangement agreed with Shareholders in the relevant Classes, Shares in the Category B, C2 and E Classes will automatically convert into Shares in the corresponding T Class, at no additional cost to holders of such Shares, upon the expiry of four years (Category B Classes), two years (Category C2 Classes) and three years (Category E Classes) from the date of the initial subscription into the relevant B, C2 or E Class.

#### Other important information for investors in Hong Kong

As the Portfolio has been authorised for public offer in Hong Kong, the Hong Kong Securities and Futures Commission (“HKSF”) requires the Company to classify the Portfolio on the basis of its expected maximum net derivative exposure (“NDE”). The HKSF requires the NDE to be calculated in accordance with the HKSF’s Code on Unit Trusts and Mutual Funds and the requirements and guidance issued by the HKSF, which may be updated from time to time. This requires the Company to convert all FDI acquired for investment purposes that would generate incremental leverage at the portfolio level of the Portfolio into their equivalent positions in the underlying assets. Applying these requirements, the Portfolio’s NDE is expected to be less than 50% but the actual level may be higher than the expected level in exceptional circumstances, for example when there are sudden movements in markets and/or investment prices.

For the avoidance of doubt, complying with the HKSF’s requirements to classify the Portfolio on the basis of its NDE does not amend the investment objectives or policies or otherwise impact the management of the Portfolio or its use of FDI, as the requirements are solely to measure the Portfolio’s expected use of FDI, as described above, using the HKSF’s methodology and disclose the results.

## Neuberger Berman US Small Cap Intrinsic Value Fund

**The Portfolio will not use FDI extensively or primarily for investment purposes.**

<b>Investment Objective</b>	Seek to achieve long term capital growth.
<b>Investment Approach</b>	<p>The Portfolio will primarily invest in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on Recognised Markets in the US. The Portfolio's investment in small capitalisation companies will not be restricted by sector or industry.</p> <p>The Sub-Investment Manager generally considers small-capitalisation companies to be those with market capitalisations less than US\$5 billion at the time of initial purchase or companies whose stocks are within the universe of the Benchmark, or such other index as the Sub-Investment Manager may from time to time deem appropriate, at the time of initial purchase. The Portfolio may continue to hold a position in corporations even after their market capitalisations exceed US\$5 billion or where those stocks are no longer part of the universe of the Benchmark or such other index as the Sub-Investment Manager may from time to time deem appropriate.</p> <p>The Sub-Investment Manager seeks to identify undervalued securities which it believes are selling at a material discount to their intrinsic value and in respect of which a catalyst could narrow the value/price differential (ie: where a particular catalyst may result in an increase to the price of such security to reflect more closely what the Sub-Investment Manager believes to be the security's intrinsic value (i.e. it's inherent worth, as distinct from its then current market price) and thereby result in sustainable value creation over time. Such catalysts may include:</p> <ul style="list-style-type: none"> <li>• restructuring (for example, the restructuring of management personnel and operations personnel and systems), debt restructuring and financial restructuring (including, for example, the creation of new shares, the purchase or outstanding shares or public offering of shares);</li> <li>• major changes to management personnel and/or management structure;</li> <li>• split up/spin off of a company's business operations, units, segments or branches;</li> <li>• share repurchases and asset sales;</li> <li>• capital reallocation;</li> <li>• corporate re-engineering, including the analysis and subsequent re-engineering of a company's business objectives, strategies, processes and workflows; and</li> <li>• other future business prospects which, in the Sub-Investment Manager's opinion, may result in the achievement of the Portfolio's investment objective.</li> </ul> <p>Using the above catalyst criteria, the Sub-Investment Manager identifies a range of potential investments and analyses the significance of any relevant or potential catalyst, quantifying its potential impact on the relevant company's growth.</p> <p>The Portfolio follows a disciplined selling strategy and will consider disposing of an investment where:</p> <ul style="list-style-type: none"> <li>• the company's stock price / value differential narrows significantly;</li> <li>• there is a change in strategic plan or intrinsic value assessment; or</li> <li>• portfolio diversification is necessary.</li> </ul> <p>The Portfolio may also invest up to 20% of its Net Asset Value in equity securities issued by US and non-US (including Emerging Market Countries) mid-capitalisation companies. The Sub-Investment Manager generally considers mid-capitalisation companies to be those with market capitalisations of between US\$5 billion and US\$20 billion at the time of initial purchase. The Portfolio may continue to hold a position in a corporation after its market capitalisation exceeds US\$20 billion as the Sub-Investment Manager deems appropriate. The Portfolio's investment in mid-capitalisation companies will not be restricted by sector or industry.</p> <p>The Portfolio is actively managed and does not intend to track the Benchmark, which is included</p>

---

here for performance comparison purposes and because the Portfolio will use the Benchmark as a universe from which it will select the investments that it makes in accordance with its investment objective and policies. The Portfolio may not hold all or many of the Benchmark's components.

---

**Benchmark** The Russell 2000 Value Index (Total Return, Net of Tax, USD) which is an unmanaged index comprised of the stock prices of the small cap value segment of the US equity universe and measures the market of smaller capitalised US stocks.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

**Base Currency** US Dollars (USD).

---

**Instruments / Asset Classes** The Portfolio will invest primarily in equity securities. The Portfolio can invest in or be exposed to the following types of assets.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, issued by small-capitalisation companies that have their head office or exercise an overriding part of their economic activity in the US and are listed or traded on Recognised Markets in the US. Additionally, the Portfolio may also invest in equity securities issued by non-US (including Emerging Market Countries) small-capitalisation companies although such investments will generally not exceed 10% of the Portfolio's Net Asset Value. Total investment in equity securities issued in Emerging Market Countries, through small-capitalisation and mid-capitalisation companies, shall not exceed 20% of the Portfolio's Net Asset Value.

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under "*Collective Investment Schemes*" below, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or lower rated securities, generally those rated below investment grade and sometimes referred to as "junk bonds".

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% in other collective investment schemes (including ETFs) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and/or the Sub-Investment Manager or its affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in Relevant Jurisdictions or the United States of America and will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment schemes measure their global exposure.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

---

**Investment Restrictions**

- The Portfolio will not utilise total return swaps, securities lending or margin lending.

**Risk**

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. While investors should read and consider the entire “*Investment Risks*” section of the Prospectus, the “*Small Cap Risk*”, which is contained within the “*Market Risks*” section, is particularly relevant to this Portfolio. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
- Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
- The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio’s Net Asset Value, as measured using the Commitment Approach, at any time.
- The Sub-Investment Manager will use forward currency contracts in order to hedge currency risk.
- The Portfolio will seek to reduce risk by diversifying among companies and industries and, at times, may place emphasis on certain sectors that could benefit from potential increases in stock prices.
- The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.

**Environmental, Social and Governance (“ESG”)**

This Portfolio is classified as an Article 6 Portfolio under SFDR.

ESG risks and opportunities may be considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager may assess securities in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

**Typical Investor Profile**

The Portfolio may be suitable for investors seeking long term capital appreciation over a mid-to-long term horizon. The investor should be prepared to accept the risks of investing in equity securities issued by small-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and to accept medium to high levels of volatility due to the Portfolio’s investment policies or portfolio management techniques.

**Fees and Expenses**

Category	Maximum Initial Charge	Maximum Management fee	Distribution Fee

<b>E</b>	3%	2%	1%	0%	0%

## Neuberger Berman US Equity Fund

**The Portfolio will not use FDI extensively or primarily for investment purposes.**

**Investment Objective** Seek long term capital appreciation.

**Investment Approach**

The Portfolio will seek to achieve its objective principally by taking long positions in equity and equity-linked securities, listed or traded on Recognised Markets in the US. The Portfolio may also but to a lesser extent take long positions in equity and equity-linked securities which are listed or traded on Recognised Markets located in the countries which comprise the MSCI ACWI (All Country World Index) (the "**Index**") (which may include Emerging Market Countries) and described in the "Instruments/Asset Classes" section.

The equity securities in which the Portfolio invests may include those issued by corporate, governments and government related entities across all industrial sectors and market capitalisations.

The Sub-Investment Manager will employ a research driven, bottom-up, fundamental approach to stock selection, with a long term perspective that combines both quantitative analysis and qualitative judgment to identify investments that the Sub-Investment Manager considers to be attractive. From a quantitative perspective, the Sub-Investment Manager's key financial metrics is return on invested capital through a full business cycle. Its quantitative analysis includes an assessment of the quality of an issuer's income statement, balance sheet and cash flows and an understanding of the key drivers of its business. From a valuation perspective, a myriad of financial metrics are analysed, on a historical basis, as well as relative to the issuer's competitors. These metrics may include the issuer's price to earnings, price to free cash flow, price to sales, price to book value and enterprise value to EBITDA (earnings before interest, tax, depreciation and amortisation) ratios. The Sub-Investment Manager will also regularly conduct quantitative screens as one element to help identify investment candidates. Qualitatively, they conduct a fundamental business evaluation, including the durability of an issuer's competitive advantage, in an effort to understand the risk involved with an investment. This will involve meeting with management teams (assessing quality, experience and past success), competitors, industry participants and other stakeholders. Another important factor in the overall evaluation is to understand the alignment of an issuer's management's interests and incentives, as assessed through meetings with management, with the achievement of the Portfolio's investment objective.

The Sub-Investment Manager generally intends to invest in companies which it believes are undervalued. They will look for what it believes to be attractive businesses, led by strong management teams with a track record of success whose securities are available at valuations that they consider to be compelling. The investment process involves applying a valuation framework that seeks to identify investments that exhibit a demonstrated ability to produce profits that exceed the cost of capital. This measurement, known as Economic Value Added (EVA), helps gain insight into each and every business that is considered for investment by identifying profits generated by issuers using less capital which are considered to be more valuable than those generated using comparatively more capital. Key factors for EVA include understanding capital structures, cost of capital and other underlying business drivers (e.g. revenue growth and margins) that drive reinvestment rates and returns. Furthermore, the Sub-Investment Manager seeks to invest in issuers where management's compensation framework is aligned with an EVA mindset (i.e. management pay is linked to generation of EVA). While the Sub-Investment Manager evaluates other key measures, such as price-to-earnings and price-to-book value ratios, its investment approach is primarily focussed on the principles of EVA, which the Sub-Investment Manager believes gives distinct insight when making investments.

The Sub-Investment Manager will follow a disciplined selling strategy that analyses broad based, macro-economic and/or security-specific circumstances and may sell a security for a number of reasons, including when it reaches a target price, if the issuer's business fails to perform as expected, or when other opportunities appear

more attractive. From a macro-economic perspective, the Sub-Investment Manager monitors a host of variables that include but are not limited to the fixed income markets (e.g. credit spreads in respect of equity issuers), equity market volatility, leading economic indicators, and the global geopolitical environment. From a company-specific perspective, a security may be sold when it reaches a target price, if there is a change in the Sub-Investment Manager's underlying thesis in respect of the security or the industry or country that it is located in, if the issuer's business fails to perform as expected.

Under normal market conditions, the Sub-Investment Manager will invest a minimum of 75% of the Portfolio's Net Asset Value in securities issued by companies domiciled in or governments and government related entities of the United States.

Although the Portfolio will concentrate its investments in securities issued by companies domiciled in or governments and government related entities of the US, without any particular focus on any one region within the US or industrial sector, the Portfolio may also invest in securities of issuers located in other countries, including Emerging Market Countries.

The Portfolio is actively managed and does not intend to track the Benchmark and is not constrained by it. The Benchmark is included here for performance comparison purposes only. It is not expected that the majority of the Portfolio's assets will be components of the Benchmark. While the Portfolio may acquire securities which are components of the Benchmark, it will not do so because of their inclusion in the Benchmarks.

The Portfolio is also managed in reference to the Index. The Portfolio does not intend to track the Index, which is included here because the Portfolio's investment policy limits the Portfolio's ability to invest in non-US securities to those issued by issuers domiciled in countries which are represented in the Index.

---

#### Benchmark

The S&P 500 Index (Total Return, Net of Tax, USD), which is a capitalisation weighted index of US 500 stocks designed to measure the performance of the broad economy of the US, through changes in the aggregate market value of 500 stocks representing all major industries

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

---

#### Base Currency

US Dollars (USD).

---

#### Instruments / Asset Classes

The Portfolio will primarily invest in the following securities which, with the exception of permitted investments in unlisted securities, may be issued and listed or traded on Recognised Markets globally. The Portfolio can invest in or be exposed to the following types of assets.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock and UCITS eligible partnership interests. Partnership interests are effectively equivalent to shares but are issued by an issuer established as a limited partnership instead of as a company, along with the following:

- Deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities; and
- Recently issued securities of the types described above, which are unlisted but have been issued with an undertaking to apply for admission to listing on a Recognised Market within a year of issue.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located in globally. They will invest

---

the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.

The Portfolio may also invest in unlisted equity securities of the types described above.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% in other collective investment schemes (including ETFs) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and/or the Sub-Investment Manager or its affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in the Relevant Jurisdictions or the US and will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment schemes measure their global exposure.

**Financial Derivative Instruments ("FDIs")** subject to the conditions and limits imposed by the Central Bank as set out in this Supplement, the Portfolio may use FDI, for hedging, efficient portfolio management and/or investment purposes and subject to the conditions and limits imposed by the Central Bank, as set out in this Supplement:

- Warrants (including equity warrants), rights (including equity rights) and convertible bonds may be used for investment and efficient portfolio management purposes, including to hedge or to achieve exposure to a particular security. Convertible bonds enable the holder to convert their investment in the bonds into the issuer's common stock at a pre-agreed price;
- Futures contracts based on UCITS eligible equity indices and currencies may be used to hedge existing long positions or to achieve profit;
- Options on equity securities and eligible equity indices may be used to hedge existing long positions or to achieve profit;
- Swaps including contracts for difference, equity, total return and currency swaps may be used to hedge existing long positions or to achieve profit. The maximum proportion of the Portfolio's Net Asset Value that can be subject to total return swaps is 10%. The expected proportion of the Portfolio's Net Asset Value that will be subject to total return swaps is 0%. The expected proportions are not limits and the actual percentages may vary over time depending on factors including, but not limited to, market conditions; and
- Forward currency contracts may be used to achieve a profit through gaining exposure to an increase in the value of currencies, as well as to hedge existing long currency positions.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Sub-Investment Manager may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to seek to add excess return.

---

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

- 
- Investment Restrictions**
- Under normal market conditions, the Sub-Investment Manager will invest:
    - A minimum of 75% of the Portfolio's Net Asset Value in securities issued by companies domiciled in or governments and government related entities of the United States;
    - No more than 20% of the Portfolio's Net Asset Value in securities issued by companies domiciled in or governments and government related entities of Emerging Market Countries.
  - The Portfolio may not invest more than 10% of the Portfolio's Net Asset Value in unlisted equity securities.
  - The Portfolio may not invest more than 10% of the Portfolio's Net Asset Value in units of other collective investment schemes, including ETFs.
  - The Portfolio will not utilise securities lending or margin lending.

- 
- Risk**
- Investment in the Portfolio carries certain risks which are described in greater detail in the "*Investment Risks*" section of the Prospectus. Investors should read and consider the entire "*Investment Risks*" section of the Prospectus. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
  - Investors should refer to the Company's risk management policy with respect to the use of FDI contained in the RMP Statement.
  - The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio's Net Asset Value, as measured using the Commitment Approach, at any time.
  - The Sub-Investment Manager may use forward and future currency contracts in order to hedge some currency risk on a discretionary basis. The use of such hedging techniques may increase the risk profile of the Portfolio.
  - The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.

---

**Environmental, Social and Governance ("ESG")** This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

ESG risks and opportunities are systematically considered in the selection of securities to be constituents of the Portfolio. The Sub-Investment Manager assesses companies in relation to their exposure to and the management of ESG risks. ESG represents governance, (being the way in which the company is run), environmental issues, (such as the impact on natural resources), and social issues (such as human rights).

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

---

**Typical Investor Profile** Investment in the Portfolio may be suitable for an investor seeking long term capital appreciation over a mid-to-long term horizon. The investor should be prepared to accept periods of market volatility and the risks of the stock market in pursuit of long term goals.

---

For further information on fees, please refer to the “Fees and Expenses” section of the Prospectus.

## Neuberger Berman US Large Cap Value Fund

**The Portfolio will not use FDI extensively or primarily for investment purposes.**

### Investment Objective

Seek to achieve long term capital growth.

### Investment Approach

The Portfolio will primarily invest in equity securities issued by large-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on Recognised Markets in the US. The Portfolio's investment in large capitalisation companies will not be restricted by sector or industry.

The Sub-Investment Manager generally considers large-capitalisation companies to be those with a total market capitalisation within the market capitalisation range of companies in the Benchmark (as specified in the "*Benchmark*" section below), at the time of initial purchase. The Sub-Investment Manager may, in light of prevailing market conditions, continue to hold an existing or add to a new position in corporations even after their market capitalisations have fallen below the minimum capitalisation necessary for inclusion in the Benchmark, provided that it is in the interest of the Shareholders to do so. The Sub-Investment Manager may also, to a limited extent, invest in securities which have a market capitalisation below the minimum capitalisation necessary for inclusion in the Benchmark at the time of their purchase.

The Sub-Investment Manager generally intends to invest in companies which they believe are undervalued. They will look for what they believe to be attractive businesses, led by strong management teams with a track record of success whose securities are available at valuations that they consider to be compelling.

The Sub-Investment Manager seeks to identify undervalued securities by analysing expected returns using normalised earnings. Normalised earnings represent a company's earnings that omit the effects of non-recurrent events or, for cyclical companies, remove economic cycles and helps the Sub-Investment Manager identify attractive entry-points.

The investment process also includes identifying companies with catalysts that have the potential to improve the company's earnings. Such catalysts may include management changes, restructuring, new products, new services or new markets.

Once the Sub-Investment Manager has identified a set of undervalued securities, further analysis includes industry research and security-specific research.

Industry research aims to identify capital and capacity constrained industries in order to identify companies that face lower competition which can lead to less margin pressure, supporting earnings and dividends over time.

Security-specific research focuses on financial analysis, meetings with company's management, customers, suppliers and competitors, evaluation of barriers to entry and utilising the information network of the Sub-Investment Manager to determine company prospects, understand the consensus view and identify factors that are misunderstood by the market.

The Portfolio follows a disciplined selling strategy and will consider disposing of an investment where:

- the company's stock price appears over-valued; or
- a catalyst is no longer present or the price of the security reflects the catalyst.

Under normal market conditions, the Sub-Investment Manager will invest a minimum of 75% of the Portfolio's Net Asset Value in securities issued by companies domiciled in the United States.

Although the Portfolio will concentrate its investments in securities issued by companies domiciled in the US, without any particular focus on any one region within the US or industrial sector, the Portfolio may also invest in securities of issuers that are listed or traded on Recognised Markets outside of the US. Such investments will be through American Depositary Receipts.

The Portfolio may also invest in money market instruments on an ancillary basis.

The Portfolio is actively managed and does not intend to track the Benchmark, which is included here for performance comparison purposes and because the Portfolio will use the Benchmark as

a universe from which it will select the investments that it makes in accordance with its investment objective and policies. The Portfolio may not hold all or many of the Benchmark's components.

---

**Benchmark**

The Russell 1000 Value Index (Total Return, Net of Tax, USD) which is an unmanaged index comprised of the stock prices of the large cap value segment of the US equity universe and measures the market of larger capitalised US stocks.

Shareholders in a Class which is denominated in a currency other than the Base Currency should note that, where available, it may be more meaningful to compare the performance of such Class against a version of this index which is denominated in the relevant Class currency.

The Benchmark has not been designated as a reference benchmark for the purposes of SFDR.

Therefore, it is not consistent with the promotion of environmental or social characteristics.

---

**Base Currency**

US Dollars (USD).

---

**Instruments /  
Asset Classes**

The Portfolio will primarily invest in the following securities which may be issued and listed or traded on Recognised Markets globally. The Portfolio can invest in or be exposed to the following types of assets.

**Equity and Equity-linked Securities.** These securities may include, without limitation, common stock, preferred stock, convertible bonds, convertible preferred stock, American Depositary Receipts and UCITS eligible partnership interests. Partnership interests are effectively equivalent to shares but are issued by an issuer established as a limited partnership instead of as a company, along with deferred payment securities (securities which pay regular interest after a predetermined date) and zero coupon securities.

**Equity Real Estate Investment Trusts ("REITs").** REITs are companies or trusts that pool investor money and invest mainly in income producing real estate, although it should be noted that the Portfolio will not acquire any real estate directly. REITs may invest in a diverse range of real estate properties or may specialise in a particular type of property. The REITs which the Portfolio will invest in may be based globally and will give exposure to underlying properties located in globally. They will invest the majority of their assets directly in real property and derive their income from rents and capital gains from appreciation realised through property sales.

**Collective Investment Schemes.** The Portfolio may invest in collective investment schemes which are themselves exposed to investments that are similar to the Portfolio's other investments, provided that the Portfolio may not invest more than 10% in other collective investment schemes (including ETFs) which themselves may invest up to 10% of their net asset value in other collective investment schemes. Such collective investment schemes may or may not be managed by the Manager and the Sub-Investment Manager or their affiliates and will comply with the requirements of the UCITS Regulations in respect of such investments.

The other collective investment schemes in which the Portfolio may invest will be eligible collective investment schemes in accordance with the Central Bank's rules, which may be domiciled in the Relevant Jurisdictions or the US and will qualify as UCITS or AIF schemes and will be regulated as such by their home state regulator.

Collective investment schemes in which the Portfolio invests may be leveraged but such collective investment schemes will not generally be leveraged (i) in excess of 100% of their net asset value; or (ii) so that their 1 day absolute value-at-risk exceeds 4.47% of their net asset value over a 250 day horizon with a 99% confidence level; or (iii) so that their 1 month relative value-at-risk exceeds twice the value-at-risk of a comparable benchmark portfolio over a 250 day horizon with a 99% confidence level, depending on how such collective investment schemes measure their global exposure.

**Money Market Instruments.** The Portfolio may invest in money market instruments, which may include bank deposits, fixed or floating rate instruments (including commercial paper), floating or variable rate notes, bankers acceptances, certificates of deposit, debentures and short-dated government or corporate bonds, cash and cash equivalents (including treasury bills), or money market funds which meet the criteria set out under "*Collective Investment Schemes*" above, in each case that are rated as investment grade or below by Recognised Rating Agencies or are unrated.

Investment grade securities are highly rated securities, generally those rated Baa3, BBB- or above by one or more Recognised Rating Agencies, while high yield securities are medium or

---

lower rated securities, generally those rated below investment grade and sometimes referred to as “junk bonds”.

**Financial Derivative Instruments (“FDIs”)** subject to the conditions and limits imposed by the Central Bank as set out in this Supplement, the Portfolio may use FDI, for hedging, efficient portfolio management and/or investment purposes and subject to the conditions and limits imposed by the Central Bank, as set out in this Supplement:

- Warrants (including equity warrants), rights (including equity rights) and convertible bonds may be used for investment and efficient portfolio management purposes, including to hedge or to achieve exposure to a particular security. Convertible bonds enable the holder to convert their investment in the bonds into the issuer’s common stock at a pre-agreed price;
- Futures contracts based on currencies may be used to hedge existing long positions; and
- Forward currency contracts may be used as to hedge existing long currency positions.

As the Portfolio may purchase FDI generally using only a fraction of the assets that would be needed to purchase the relevant securities directly, the remainder of the assets allocated to the Portfolio may be invested in the other types of securities listed above. The Sub-Investment Manager may therefore seek to achieve greater returns by taking exposure to the performance of such securities through purchasing FDI which give exposure to them rather than purchasing the securities themselves and investing the remaining assets in other such securities to seek to add excess return.

**Repo Contracts.** Repo Contracts may be used subject to the conditions and limits set out in the Prospectus.

---

#### Investment Restrictions

- Under normal market conditions, the Sub-Investment Manager will invest a minimum of 75% of the Portfolio’s Net Asset Value in securities issued by companies domiciled in the United States.
- The Portfolio may not invest more than 10% of the Portfolio’s Net Asset Value in securities whose capitalisation is less than the range of capitalisation of companies in the Benchmark at the time of their purchase.
- The Portfolio may not invest more than 10% of the Portfolio’s Net Asset Value in units of other collective investment schemes, including ETFs.
- The Portfolio may not invest more than 10% of the Portfolio’s Net Asset Value in warrants.
- The Portfolio may not invest more than 20% of the Portfolio’s Net Asset Value in REITs.
- The Portfolio may not invest more than 10% of the Portfolio’s Net Asset Value in securities of issuers located in Emerging Market Countries.
- The Portfolio will not utilise securities lending or margin lending.

---

#### Risk

- Investment in the Portfolio carries certain risks which are described in greater detail in the “*Investment Risks*” section of the Prospectus. Investors should read and consider the entire “*Investment Risks*” section of the Prospectus. **These risks are not purported to be exhaustive and potential investors should review this Supplement and the Prospectus in their entirety and consult with their professional advisers, before making an application for Shares.**
  - Investors should refer to the Company’s risk management policy with respect to the use of FDI contained in the RMP Statement.
  - The Portfolio may be leveraged as a result of its investments in FDI but such leverage will not exceed 100% of the Portfolio’s Net Asset Value, as measured using the Commitment Approach, at any time.
  - The Sub-Investment Manager may use forward and future currency contracts in order to hedge some currency risk on a discretionary basis. The use of such hedging techniques may increase the risk profile of the Portfolio.
  - The Portfolio may have or may be expected to have medium to high volatility due to its investment policies or portfolio management techniques.
-

**Environmental,  
Social and  
Governance  
("ESG")**

This Portfolio meets the classification of an Article 8 Portfolio as it promotes environmental and social characteristics and limits investments to those companies that follow good governance practices. **Information about these environmental and social characteristics is available in the SFDR Annex below.**

The Portfolio will primarily invest in equity securities issued by large-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US.

The Sub-Investment Manager will manage the Portfolio in accordance with the ESG Policy on a continuous basis. The Sub-Investment Manager has fully integrated the ESG Policy into the overall investment process, in particular, the portfolio construction process. A summary of the ESG Policy is detailed in Annex VI of the Prospectus and it is available on the Neuberger Berman website, [www.nb.com/esg](http://www.nb.com/esg).

The Sub-Investment Manager's global standards policy shall also ensure that 100% of the Portfolio will be invested in compliance with the exclusion criteria of the UNGC Principles, the OECD Guidelines, the UNGPs and the ILO Standards

The Sub-Investment Manager shall also engage directly with a majority of the investee companies (e.g., management teams) through a robust qualitative ESG engagement program. Once specific holdings have been selected, the engagement program is focused on in-person meetings and conference calls to understand ESG risks, opportunities and assess good corporate governance practices at investee companies. The Sub-Investment Manager views this direct engagement with investee companies, as an essential part of its investment process. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with companies which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have poor NB ESG Quotient scores (as described below), in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. For these engagements, the Sub-Investment Manager will set out engagement targets to promote environmental, social and governance objectives. The Sub-Investment Manager will closely monitor and track these engagement activities. The team also typically includes the Sub-Investment Manager's research analyst that covers the issuers during these engagements.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its [NB Votes](#) initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the Neuberger Berman group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which Neuberger Berman has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

The Sub-Investment Manager considers financially material ESG factors (which may be climate or human capital related as noted above) as part of its investment decision making process. ESG integration is an essential part of the Sub-Investment Manager's rigorous and disciplined investment process as outlined above.

The Sub-Investment Manager uses the NB ESG Quotient supported by third party data as part of its investment analysis. The NB ESG Quotient builds on the Sub-Investment Manager's unique materiality framework and leverages specialized third party data, its own data science efforts and finally its central research analysts' judgment with respect to ESG analysis. The NB ESG Quotient scores are relative to sector peers across over thirty-three industries and seventy-seven ESG specific factors which allows for deep ESG fundamental research. Secondly, the Sub-Investment Manager leverages the NB ESG Quotient scores to identify material opportunities to engage portfolio companies which have time to adapt to better understand and improve their ESG risks and opportunities.

The Sub-Investment Manager also leverages the firm's Climate Value-at-Risk (CVaR) model to better comprehend the long term climate risks embedded in the Portfolio. CVaR is defined as the present value of the aggregated future policy risk costs, technology opportunity profits, and extreme weather event costs and profits expressed as a percentage of the portfolio's market value should the climate scenario in question be realized. CVaR helps to identify climate risk and translate it into an economic value in present dollars.

Please also refer to Annex VI of the Prospectus which contains additional information on sustainability related disclosures.

<b>Typical Investor Profile</b>	The Portfolio may be suitable for investors seeking long term capital appreciation over a mid-to-long term horizon. The investor should be prepared to accept the risks of investing in equity securities issued by large-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and to accept medium to high levels of volatility due to the Portfolio's investment policies or portfolio management techniques.

**Product name:** Neuberger Berman US Small Cap Fund (the “Portfolio”)  
**Legal entity identifier:** 549300CG2QDECVFZQ378

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

<p><input checked="" type="radio"/> <input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b></p> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective:</b> ___%</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective:</b> ___%</p>	<p><input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b></p> <p><input type="checkbox"/> It promotes <b>Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul> <p><input checked="" type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>
--	---

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**What environmental and/or social characteristics are promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in

clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. The Portfolio will not purchase securities of companies that manufacture firearms. The Portfolio will not purchase securities of companies that derive 5% or more of their revenue from tobacco, gambling or adult entertainment. Further details on these

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; and (ii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

- **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

- **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

- — — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

- — — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the ILO Standards, the UNGC Principles and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio does not commit to holding Taxonomy-aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs. Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

### **What investment strategy does this financial product follow?**

The investment objective of the Portfolio is to achieve capital growth through the selection of investments applying analysis of company key metrics and macro economic factors. The Portfolio will primarily invest in equity securities issued by small-capitalisation companies which have either their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on Recognised Markets (as depicted in Annex I on the prospectus).

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance is also considered such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

### ● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

#### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

#### II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

direct engagement with companies, as an important part of its investment process (including the investment selection process).

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

### III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

#### ● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

#### ● ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**What is the asset allocation planned for this financial product?**

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the “Other” section of the Portfolio.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio’s mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves .

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

**Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- **What is the minimum share of investments in transitional and enabling activities?**

The Portfolio does not commit to holding Taxonomy-aligned investments.

- **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A

- **What is the minimum share of socially sustainable investments?**

N/A

- **What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

- **Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

- **How does the designated index differ from a relevant broad market index?**

N/A

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

SFDR ANNEX

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman US Multi Cap Opportunities Fund (the “Portfolio”)  
**Legal entity identifier:** 549300K77TBAIVA0NY51

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

<p><input checked="" type="radio"/> <input type="radio"/> <b>Yes</b></p>	<p><input type="radio"/> <input checked="" type="radio"/> <input checked="" type="checkbox"/> <b>No</b></p>
<p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective</b>: ___%</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective</b>: ___%</p>	<p><input type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments</p> <p style="margin-left: 20px;"><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p style="margin-left: 20px;"><input type="checkbox"/> with a social objective</p> <p><input checked="" type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b></p>

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**What environmental and/or social characteristics are promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient as a resource to promote the environmental and social characteristics listed below. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient rating to seek improvement in the related underlying environmental and social characteristics.

The following environmental and social characteristics are among those promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in

clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. The sustainability indicators include, and are not limited to, the indicators listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager engages with issuers with a poor NB ESG Quotient rating to seek improvement in the related underlying environmental and social characteristics.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

— — *How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

— — *How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, ILO Standards, UNGC Principles and UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio does not commit to holding Taxonomy aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

Yes, please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors. The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager's subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

#### **What investment strategy does this financial product follow?**

The investment objective of the Portfolio is to achieve capital growth through the selection of investments using systematic, sequential research. The Portfolio will seek to achieve its objective primarily by investing in a portfolio, consisting mainly of equity and equity-linked securities, listed or traded on Recognised Markets (as depicted in Annex I on the prospectus) in the US and related securities and American Depositary Receipts (ADRs) that are selected using a fundamental, bottom-up research approach. The Portfolio may hold stocks of companies of any market capitalisation and in any economic sector.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient rating to seek improvement in the related underlying environmental and social characteristics.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance is also considered such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

#### ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

ESG characteristics are considered at three different levels:

##### **I. Integrating proprietary ESG analysis:**

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient rating to seek improvement in the related underlying environmental and social characteristics.

## II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

## III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

- ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

### What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the minimum proportion asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

### How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas
  - In nuclear energy
- No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

The Portfolio does not commit to holding Taxonomy-aligned investments.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A

**What is the minimum share of socially sustainable investments?**

N/A

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) of the Portfolio which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

● **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

● **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

● **How does the designated index differ from a relevant broad market index?**

N/A

● **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Product name:** Neuberger Berman US Equity Fund (the “Portfolio”)  
**Legal entity identifier:** 549300GF328Y6TQJ1517

## Environmental and/or social characteristics

**Does this financial product have a sustainable investment objective?**

**Yes**

**No**

It will make a minimum of **sustainable investments with an environmental objective:** \_\_\_%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of \_\_\_% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It will make a minimum of **sustainable investments with a social objective:** \_\_\_%

It promotes E/S characteristics, but **will not make any sustainable investments**

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**What environmental and/or social characteristics are promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient and third party data to promote the environmental and social characteristics listed below by prioritising investment in securities issued by companies with a favourable and/or an improving NB ESG Quotient or third party rating. Pursuant to this, the Sub-Investment Manager will not invest in a company with a poor NB ESG Quotient or third party rating unless there is a commitment to engage with the company with an expectation that the NB ESG Quotient or third party rating will improve over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in

clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

- As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) and third party data are used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Issuers with a favourable and/or an improving NB ESG Quotient or third party rating have a higher chance of being included in the Portfolio. Issuers with a poor NB ESG Quotient or third party rating, especially where a poor NB ESG Quotient or third party rating is not being addressed by a company, are more likely to be removed from the investment universe or divested from the Portfolio. In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient, in order to assess whether concerns are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("CVaR") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

- ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

N/A – the Portfolio does not commit to holding sustainable investments.

- ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

N/A – the Portfolio does not commit to holding sustainable investments.

*How have the indicators for adverse impacts on sustainability factors been taken into account?*

N/A

*How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the ILO Standards, the UNGC Principles and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A – The Portfolio does not commit to holding Taxonomy aligned investments.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## Does this financial product consider principal adverse impacts on sustainability factors?

Yes,  please see below

No

The Sub-Investment Manager will consider the following principal adverse impacts, namely: GHG emissions, carbon footprint, GHG intensity, fossil fuel exposure, board gender diversity, UNGC Principles & OECD Guidelines violations and controversial weapons (the “**Product Level PAIs**”).

The Sub-Investment Manager has utilised third party data and proxy data along with internal research to consider the above Product Level PAIs.

Additionally, the Sub-Investment Manager has conducted a letter campaign where it has written to select companies asking for direct disclosure on the Product Level PAIs in order to offer high-quality disclosures to investors.

The Sub-Investment Manager will continue to work with companies to encourage disclosure and envisages that the letter campaign will result in wider and more granular data coverage on the PAIs.

The Product Level PAIs that are taken into consideration are subject to there being adequate, reliable and verifiable data coverage for such indicators (in the Sub-Investment Manager’s subjective view), and may evolve with improving data quality and availability. Where such data is not available the relevant Product Level PAI will not be considered until such time as the data becomes available. The Sub-Investment Manager will keep the list of Product Level PAIs they consider under active review, as and when data availability and quality improves.

Consideration of the Product Level PAIs by the Sub-Investment Manager will be through a combination of:

- Monitoring the Portfolio, in particular where it falls below the quantitative and qualitative tolerance thresholds set for each Product Level PAI by the Sub-Investment Manager;
- Stewardship and/or setting engagement objectives where the Portfolio falls below the quantitative and qualitative tolerance thresholds set for a Product Level PAI; and
- Application of the ESG exclusion policies referenced above, which includes consideration of several of the Product Level PAIs.

Reporting on consideration of Product Level PAIs will be available in an annex to the annual report of the Portfolio.

## What investment strategy does this financial product follow?

The investment objective of the Portfolio is to seek long term capital appreciation. The Portfolio will seek to achieve its objective principally by taking long positions in equity and equity-linked securities, listed or traded on Recognised Markets (as depicted in Annex I on the prospectus) in the US. The Portfolio may also but to a lesser extent take long positions in equity and equity-linked securities which are listed or traded on Recognised Markets located in the countries which comprise the MSCI ACWI (All Country World Index) (which may include Emerging Market Countries).

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria and third party data as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Companies with a favourable and/or an improving NB ESG Quotient or third party rating have a higher chance of ending up in the Portfolio. Companies with a poor NB ESG Quotient or third party rating especially where these are not being addressed by that company, are more likely to be removed from the investment universe or divested from the Portfolio.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company’s financial performance is also considered, such as revenue/earnings before interest, tax, depreciation, and amortisation (“**EBITDA**”) growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

- **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

ESG characteristics are considered at three different levels:

I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The NB ESG Quotient or third party rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Companies with a favourable and/or an improving NB ESG Quotient or third party rating have a higher chance of ending up in the Portfolio. Companies with a poor NB ESG Quotient or third party rating especially where these are not being addressed by that company, are more likely to be removed from the investment universe or divested from the Portfolio.

II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process).

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

N/A

● ***What is the policy to assess good governance practices of the investee companies?***

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

### What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 80% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 20% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

**To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas       In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

The Portfolio does not commit to holding Taxonomy-aligned investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A

**What is the minimum share of socially sustainable investments?**

N/A

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) of the Portfolio which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- ***How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?***  
N/A
- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***  
N/A
- ***How does the designated index differ from a relevant broad market index?***  
N/A
- ***Where can the methodology used for the calculation of the designated index be found?***  
N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated 'Investment Strategies' section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>

Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** Neuberger Berman US Large Cap Value Fund (the “Portfolio”)  
**Legal entity identifier:** 549300J88053TDGDPM52

## Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?	
<input checked="" type="radio"/> <input type="checkbox"/> <b>Yes</b>	<input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It will make a minimum of <b>sustainable investments with an environmental objective:</b> ___% <ul style="list-style-type: none"> <li><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> </ul>	<input type="checkbox"/> It <b>promotes Environmental/Social (E/S) characteristics</b> and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments <ul style="list-style-type: none"> <li><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</li> <li><input type="checkbox"/> with a social objective</li> </ul>
<input type="checkbox"/> It will make a minimum of <b>sustainable investments with a social objective:</b> ___%	<input checked="" type="checkbox"/> It promotes E/S characteristics, but <b>will not make any sustainable investments</b>

### What environmental and/or social characteristics are promoted by this financial product?

As part of the investment process, the Sub-Investment Manager considers a variety of environmental and social characteristics, as detailed below. These environmental and social characteristics are considered using a proprietary Neuberger Berman ESG rating system (the “**NB ESG Quotient**”). The NB ESG Quotient is built around the concept of sector specific ESG risk and opportunity, and produces an overall ESG rating for companies by assessing them against certain ESG metrics.

Foundational to the NB ESG Quotient is the proprietary Neuberger Berman (“**NB**”) materiality matrix, which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk and opportunity for each sector. The NB materiality matrix enables the Sub-Investment Manager to derive the NB ESG Quotient rating, to compare sectors and companies relative to their environmental and social characteristics.

The Sub-Investment Manager uses the NB ESG Quotient to promote the environmental and social characteristics listed below. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The following environmental and social characteristics are promoted, where relevant to the specific industry and company, as part of the NB ESG Quotient rating:

- **Environmental Characteristics:** air quality; biodiversity & land use; energy management; environmental risk exposure; fuel economy; greenhouse gas (“**GHG**”) emissions; opportunities in

clean technologies; toxic emissions & waste; water management; packaging lifecycle management; materials sourcing; and product lifecycle management.

- **Social Characteristics:** access to finance; access to healthcare; community relations; data privacy & security; employee incentives & risk taking; health & nutrition; health & safety; human capital development; labour management; product safety & integrity; supply chain labour standards; workforce diversity & inclusion; pricing transparency; and responsible marketing.

Performance in relation to these environmental and social characteristics will be measured through the NB ESG Quotient, and will be reported in aggregate in the Portfolio's mandatory periodic report template (as per the requirements of Article 11 of SFDR).

The NB materiality matrix will evolve over time and all sector specific ESG characteristics included therein are reviewed annually to ensure that the most pertinent sector specific ESG characteristics are captured through the NB materiality matrix. Accordingly, the environmental and social characteristics considered as part of the NB ESG Quotient are subject to change. For the avoidance of doubt, if the environmental or social characteristics considered as part of the NB ESG Quotient change, this pre-contractual disclosure document will be updated accordingly.

Exclusions are also applied (as further set out below) as part of the construction and ongoing monitoring of the Portfolio. These represent additional environmental and social characteristics promoted by the Portfolio.

A reference benchmark has not been designated for the purpose of attaining the environmental or social characteristics promoted by the Portfolio.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

As part of the investment process, the Sub-Investment Manager considers a variety of sustainability indicators to measure the environmental and/or social characteristics promoted by the Portfolio. These are listed below:

I. The NB ESG Quotient:

The NB ESG Quotient (as explained above) is used to measure the environmental and social characteristics promoted by the Portfolio. Foundational to the NB ESG Quotient is the proprietary NB materiality matrix (as explained above), which focuses on the ESG characteristics that are considered to be the most likely to be the material drivers of ESG risk for each sector. Each sector criteria is constructed using third party and internally derived ESG data and supplemented with internal qualitative analysis, leveraging the Sub-Investment Manager's analyst team's significant sector expertise.

The NB ESG Quotient assigns weightings to environmental, social and governance factors for each sector to derive the NB ESG Quotient rating. While the NB ESG Quotient rating of issuers is considered as part of the investment process, there is no minimum NB ESG Quotient rating to be attained by an issuer prior to investment. Pursuant to this, the Sub-Investment Manager will engage with issuers with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

II. Climate Value-at-Risk:

Climate Value-at-Risk ("**CVaR**") measures the exposure to transition and physical climate risks. CVaR is a scenario analysis tool evaluating economic risks under various degree scenarios (i.e., the amount of warming targeted) and potential regulatory environments in varying countries. On a holistic basis the results are evaluated by the Sub-Investment Manager's portfolio managers and analysts. CVaR provides a framework for identifying climate-risk over the long-term to assist in understanding how companies can shift their operations and risk practices over time. The scenario analysis can serve as a starting point for further bottom-up analysis and identifying potential climate-related risks to address through company engagement. Due to data limitations, CVaR is not applied across all companies held by the Portfolio and is instead limited to the companies for which the Sub-Investment Manager has sufficient and reliable data. The analysis from CVaR is reviewed at least once a year.

III. ESG exclusion policies:

To ensure that the environmental or social characteristics promoted by the Portfolio can be attained, the Portfolio will not invest in companies whose activities breach, or are not

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

consistent with, the Neuberger Berman Controversial Weapons Policy and the Neuberger Berman Thermal Coal Involvement Policy. In addition to the application of the Neuberger Berman Thermal Coal Involvement Policy, the Sub-Investment Manager will prohibit the initiation of new investment positions in companies that (i) derive more than 25% of their revenue from thermal coal mining; or (ii) are expanding new thermal coal power generation. Furthermore, investments held by the Portfolio will not invest in companies whose activities have been identified as breaching, or are not consistent with, the Neuberger Berman Global Standards Policy which excludes identified violators of (i) the UNGC Principles, (ii) the OECD Guidelines, (iii) the UNGPs and (iv) the ILO Standards. Further details on these ESG exclusion policies are set out in the “Sustainable Investment Criteria” section of the main body of the Prospectus.

The Sub-Investment Manager will track and report on the performance of the above sustainability indicators namely, (i) the NB ESG Quotient; (ii) the CVaR; and (iii) the adherence to the ESG exclusion lists applied to the Portfolio. These sustainability indicators will be used to measure the attainment of each of the environmental and social characteristics promoted by the Portfolio and will be included in the Portfolio's mandatory periodic report (as per the requirements of Article 11 of SFDR).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

N/A – the Portfolio does not commit to holding sustainable investments.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

N/A – the Portfolio does not commit to holding sustainable investments.

--- **How have the indicators for adverse impacts on sustainability factors been taken into account?**

N/A

--- **How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

The Portfolio does not commit to holding sustainable investments, however the Sub-Investment Manager will not invest in companies whose activities have been identified as breaching the OECD Guidelines, the ILO Standards, the UNGC Principles and the UNGPs, captured through the Neuberger Berman Global Standards Policy.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

N/A - The Portfolio does not commit to holding Taxonomy-aligned investments.

**Does this financial product consider principal adverse impacts on sustainability factors?**

- Yes
- No

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## What investment strategy does this financial product follow?

The investment objective of the Portfolio is to seek to achieve long term capital growth. The Portfolio will primarily invest in equity securities issued by large-capitalisation companies which have their head office or exercise an overriding part of their economic activity in the US and that are listed or traded on Recognised Markets (as depicted in Annex I on the prospectus) in the US. The Portfolio's investment in large capitalisation companies will not be restricted by sector or industry.

The Sub-Investment Manager considers and evaluates ESG characteristics, as an important component of their equity analysis discipline, when making investment decisions. The Sub-Investment Manager utilises the NB ESG Quotient criteria as part of the Portfolio construction and investment management process. As noted above, NB ESG Quotient assigns weightings to environmental, social and governance characteristics for each sector to derive the NB ESG Quotient rating. Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

The ESG analysis is performed internally, with the support of third-party data, and is not outsourced.

In addition, fundamental analysis aimed at assessing the company's financial performance is also considered such as revenue/earnings before interest, tax, depreciation, and amortisation ("**EBITDA**") growth, cash flow growth, capital expenditures, leverage trends and liquidity profile.

### ● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

ESG characteristics are considered at three different levels:

#### I. Integrating proprietary ESG analysis:

The NB ESG Quotient ratings are generated for company holdings in the Portfolio. The NB ESG Quotient rating for companies is utilised to help to better identify risks and opportunities in the overall assessment.

By integrating the investment team's proprietary ESG analysis (the NB ESG Quotient) into the overall company view, there is a direct link between their analysis of material ESG characteristics and portfolio construction activities across their strategy.

Pursuant to this, the Sub-Investment Manager will engage with companies with a poor NB ESG Quotient rating with the aim to seek improvement in the underlying environmental and social characteristics (which make up the NB ESG Quotient) over time.

#### II. Engagement:

The Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process (including the investment selection process). Companies that are not receptive to engagement are less likely to be held (or to continue to be held) by the Portfolio.

This program is focused on in-person meetings and conference calls to understand ESG risks, opportunities, and assess good corporate governance practices of companies. As part of the direct engagement process, the Sub-Investment Manager may set objectives for the companies to attain. These objectives as well as the company's progress with respect to same are monitored and tracked by the Sub-Investment Manager through an internal NB engagement tracker.

In addition, the Sub-Investment Manager will seek to prioritise constructive engagement with issuers which have high impact controversies (such as corporate issuers placed on the Neuberger Berman Global Standards Policy's Watch List (as further detailed in the policy itself)), or which have a poor NB ESG Quotient rating, in order to assess whether those ESG controversies or what the Sub-Investment Manager deems as weak ESG efforts, are being addressed adequately. The success of the Sub-Investment Manager's constructive engagement efforts with issuers will depend on each of the issuer's receptiveness and responsiveness to such engagement.

**The investment strategy** guides investment decisions based on factors such as investment objectives and risk tolerance.

The Sub-Investment Manager firmly believes this consistent engagement with companies can help create economic value, reduce equity risk, and promote positive sustainable corporate change. It is an important tool to identify and better understand a company's risk factors and performance. The Sub-Investment Manager also uses it to promote change, when necessary, which they believe will result in positive outcomes for shareholders and broader stakeholders. Direct engagement when paired with other inputs, creates a feedback loop that allows analysts in the investment team to evolve their ESG scoring process and prioritise risks that are most relevant to a sector.

The Sub-Investment Manager may also escalate its engagement via proxy voting, its NB Votes initiative, public statements and possibly divestment in cases of company unresponsiveness. NB Votes is a firm-wide initiative within the NB group, whereby voting intentions and supporting rationale are published in advance of select shareholder meetings for companies in which NB has invested on behalf of its clients, addressing a broad range of topics across key governance and engagement principles.

III. ESG sectoral exclusion policies:

To ensure that the environmental and social characteristics promoted by the Portfolio can be attained, the Portfolio will apply the ESG exclusion policies referenced above, which places limitations on the investable universe.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

N/A

● **What is the policy to assess good governance practices of the investee companies?**

Governance factors that the Sub-Investment Manager tracks may include: (i) compensation and incentive alignment; (ii) shareholder rights; (iii) capital structure and investment; (iv) board composition; and (v) transparent communication and internal controls.

Engagement with management is an important component of the Portfolio's investment process, and the Sub-Investment Manager engages directly with management teams of companies through a robust ESG engagement program. This program is focused on in-person meetings and conference calls to understand risks, opportunities and assess good corporate governance practices of investee companies. The Sub-Investment Manager views this direct engagement with companies, as an important part of its investment process.

While the prioritisation assessment is ongoing, the timing of the engagement may be reactionary in certain cases, opportunistic in cases of industry events or pre-planned meetings, or proactive where time allows and without undue restrictions such as during quiet periods or M&A events that may prevent outreach actions. Ultimately, the Sub-Investment Manager aims to prioritise engagement that is expected, based on the Sub-Investment Manager's subjective analysis, to have a high impact on the protection of and improvement to the value of the Portfolio, be it through the advancement of actionable disclosure, understanding of risks and risk management at a company, or through influence and action to mitigate risks (including sustainability risks) and take advantage of investment opportunities.

The Sub-Investment Manager may take into account other governance factors as appropriate from time to time.

As described above, the Portfolio will only invest in securities issued by issuers whose activities do not breach the Neuberger Berman Global Standards Policy which identifies violators of the (i) UNGC Principles, (ii) OECD Guidelines, (iii) UNGPs and (iv) ILO Standards.

**Good governance** practices include sound management structures, employee relations, remuneration of staff and tax compliance.

## What is the asset allocation planned for this financial product?

The Portfolio aims to hold a minimum of 75% investments that are aligned with the environmental or social characteristics promoted by the Portfolio. The Portfolio does not commit to holding sustainable investments. The Portfolio aims to hold a maximum of 25% investments that are not aligned with the environmental or social characteristics promoted by the Portfolio and are not sustainable investments, and which fall into the "Other" section of the Portfolio.

The "Other" section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover. The "Other" section may also include investments or asset classes for which the Sub-Investment Manager does not have sufficient data to confirm that they are aligned with the environmental or social characteristics promoted by the Portfolio. Further details on the "Other" section are set out below.

Please note that while the Sub-Investment Manager aims to achieve the asset allocation targets outlined above, these figures may fluctuate during the investment period and ultimately, as with any investment target, may not be attained.

The exact asset allocation of this Portfolio will be reported in the Portfolio's mandatory periodic report SFDR template, for the relevant reference period. This will be calculated based on the average of the four quarter ends.

The Sub-Investment Manager has calculated the proportion of investments aligned with the environmental and/or social characteristics promoted by the Portfolio: i) that hold either an NB ESG Quotient rating or a third party equivalent ESG rating that is used as part of the portfolio construction and investment management process of the Portfolio; and/or ii) with whom the Sub-Investment Manager has engaged directly. The calculation is based on a mark-to-market assessment of the Portfolio and may rely on incomplete or inaccurate issuer or third party data.

### ● How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

While the Portfolio may use derivatives for efficient portfolio management, investment purposes and/or hedging, it will not use derivatives to promote environmental or social characteristics.

**Asset allocation** describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

### To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The analysis and disclosure requirements introduced by the EU Taxonomy are very detailed and compliance with them requires the availability of multiple, specific data points in respect of each investment which the Portfolio makes. The Sub-Investment Manager cannot commit that the Portfolio will invest in investments that qualify as environmentally sustainable for the purposes of the EU Taxonomy. It cannot be excluded that some of the Portfolio's holdings qualify as Taxonomy-aligned investments. Disclosures and reporting on Taxonomy alignment will develop as the EU framework evolves and data is made available by companies. The Sub-Investment Manager will keep the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy under active review as data availability and quality improves.

The disclosure contained in this appendix will be updated if the Sub-Investment Manager amends the minimum Taxonomy alignment of the Portfolio.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy<sup>1</sup>**

- Yes:
  - In fossil gas       In nuclear energy
- No

**The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.**

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What is the minimum share of investments in transitional and enabling activities?**

The Portfolio does not commit to holding Taxonomy-aligned investments.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective – see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulations (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

**What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

N/A

**What is the minimum share of socially sustainable investments?**

N/A

**What investments are included under “#2 Other”, what is their purpose and are there any minimum environmental or social safeguards?**

“Other” includes the remaining investments of the Portfolio (including but not limited to any derivatives or any security collateralized by a pool of similar assets or receivables listed in the Supplement for the Portfolio above) which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The “Other” section in the Portfolio is held for a number of reasons that the Sub-Investment Manager feels will be beneficial to the Portfolio, such as, but not limited to, achieving risk management, and/or to ensure adequate liquidity, hedging and collateral cover.

As noted above, the Portfolio will be invested in compliance with ESG exclusion policies, on a continuous basis. This ensures that investments made by the Portfolio seek to align with international environmental and social safeguards such as the UNGC Principles, the UNGPs, the OECD Guidelines and the ILO Standards.

The Sub-Investment Manager believes that these policies prevent investment in companies that most egregiously violate environmental and/or social minimum standards and ensures that the Portfolio can successfully promote its environmental and social characteristics.

The above steps ensure that robust environmental and social safeguards are in place.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

**Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?**

N/A – The Portfolio's benchmark has not been designated as a reference benchmark. Therefore, it is not consistent with the environmental or social characteristics promoted by the Portfolio.

- **How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?**

N/A

- **How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?**

N/A

- **How does the designated index differ from a relevant broad market index?**

N/A

- **Where can the methodology used for the calculation of the designated index be found?**

N/A

**Where can I find more product specific information online?**

Product overviews, factsheets, KIIDs and other literature can be found on the NB website, in our dedicated ‘Investment Strategies’ section at [www.nb.com](http://www.nb.com).

**More product-specific information can be found on the website:**

<https://www.nb.com/en/global/esg/reporting-policies-and-disclosures#0A63D195342B424C8C1F115547F2784A>
