GLOSSARY

The VOLATILITY of a security is the difference between performance and average performance and therefore makes it possible to gauge the consistency of performance obtained. It comprises a measure of risk. If this is zero, the individual performances are identical. The higher it is, the greater the difference between individual performances.

The TRACKING ERROR shows the volatility of a funds relative performance against that of its benchmark. It shows the difference between performances and their average and so makes it possible to gauge the consistency of relative performance. The lower the tracking error, the closer the funds performance is to that of its benchmark.

The ALPHA corresponds to the funds average performance. More specifically, it measures the fund managers added value while cancelling out market influence, which cannot be controlled. This measure is expressed as a percentage.

The SHARPE RATIO shows the funds outperformance against a zero-risk interest rate, adjusted for fund volatility.

Other definitions and methodologies are available in our fund center at www.edmond-de-rothschild.com, under the heading "Funds".
