## Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund may hold a large amount of Asset Backed Securities (ABS) (complex instruments) as well as other lower quality debt securities which may impact the liquidity of the fund under certain circumstances. The fund may invest in distressed securities which carry a significant risk of capital loss. As this fund is invested in a particular sector, you should be prepared to accept greater fluctuations in the value of the fund than for a fund with a broader investment mandate.

## Fund Strategy

The Invesco Global Income Real Estate Securities Strategy seeks to generate attractive income and provide an opportunity to capture global listed real estate equity market total returns with reduced volatility over the long-term. The goal is to provide a more attractive yield and a potentially better risk-adjusted return over a three to five-year investment horizon compared to an all-equity index.

**Past performance does not predict future returns.** Each period starts at the end of the indicated month. The first indicated month may not represent a full month and may start only on the launch/restructuring date indicated in the headline.
