Derivatives allow investors to earn large returns from small movements in the underlying asset's price. However, investors could lose large amounts if the price of the underlying moves against them significantly

Emerging markets risk: In emerging markets the legal, judicial and regulatory frameworks are still developing so there could be, for local market participants and their counterparties, a high degree of uncertainty.

Credit risk: which are linked to the debt securities the Sub-Fund may invest in;

Liquidity risk: which may occur when investments are made in financial instruments that could have a lower level of liquidity in some circumstances for example in the case of a market crash or default of issuers; due to massive redemptions of shareholders resulting in a potential decrease of the value of certain of the Sub-Fund's investments;
