What is this product?

This is a sub-fund of Schroder International Selection Fund, a mutual fund domiciled in Luxembourg and its home regulator is Commission de Surveillance du Secteur Financier.

Objectives and investment strategy

To provide a total return of capital growth and income primarily through investment in equity and equity related securities of Asia Pacific companies. The Fund also aims to offer a degree of capital preservation through the tactical use of financial derivative instruments.

The fund may buy or sell equity index futures and buy and sell index options on indices or individual stocks. To obtain exposure to equity indices and individual stocks, the fund may also enter into contracts for difference where the underlying investments are not delivered and settlement is made in cash.

The fund may seek to achieve its investment objective through investment in China A-Shares, China B-Shares, China H-Shares and/or securities linked to any of these. The fund may have significant exposure to China A-Shares and China B-Shares, however such exposure will not exceed 30% of the total net asset value of the fund. The fund will not invest directly in China A-Shares, however indirect exposure to China A-Shares may be sought for the fund through investment in financial instruments such as China market access products.

Use of financial derivative instruments (“FDI”)

The fund may employ FDI for hedging and investment purposes. FDI can be used for instance to create market exposure. Such FDI include equity, currency, volatility or index related FDI and over-the-counter and/or exchange traded options, futures, contracts for difference, warrants, swaps, forward contracts and/or a combination of the above.

The fund may use FDI extensively to meet its specific investment objective. However, the fund does not intend to use FDI extensively for investment purposes.

What are the key risks?

Investment involves risk. Please refer to the offering document for details including the risk factors.

1. Equity investment risk

Investment in equity securities is subject to the risk that the market value of the stocks may go down as well as up due to numerous factors such as changes in investment sentiment, political environment, economic environment, regional or global economic instability, currency and interest rate fluctuations. If the market value of the stocks go down the net asset value of the fund may be adversely affected.

2. Emerging and less developed markets

The fund may invest in emerging and less developed markets. Investing in emerging and less developed markets is subject to greater risks than investing in securities of developed countries such as ownership and custody risks, political and economic risks, market and settlement risks, liquidity and volatility risk, legal and regulatory risks, execution and counterparty risk, and currency risk, which may adversely affect the net asset value per share of the fund and investors may as a result suffer losses.

3. Risks related to investment in the People’s Republic of China (the “PRC”)

Investing in the securities market in the PRC is subject to the risks specific to the PRC market including change in political, social or economic policy risk, liquidity and volatility risk, currency and exchange risk.

- **Change in political, social or economic policy risk** – The investment will be sensitive to any significant change in political, social or economic policy in the PRC which may adversely affect the capital growth and thus the fund performance.
- **Liquidity and volatility risk** – Compared with the choice available in other markets, there is a low level of liquidity in the A-Shares and B-Shares of the PRC markets. This could potentially lead to severe price volatility.
- **Currency and exchange risk** – The PRC government’s control of currency conversion and exchange rates may adversely affect the operations and financial results of the companies invested in by the fund.
- **PRC taxation consideration** – The fund may be subject to capital gain, withholding and other taxes for investing in the securities market in the PRC. The tax laws, regulations and practice in the PRC are constantly changing, and may be changed with retrospective effect. Right is reserved to provide for tax on gains derived from the disposal of PRC securities. With the uncertainty of PRC tax rules, any provision for taxation made may be excessive or inadequate to meet final PEC tax liabilities. Consequently, investors may be advantaged or disadvantaged depending upon the final rules.

4. FDI

The fund may use FDI to meet its specific investment objective. There is no guarantee that the performance of FDI will result in a positive effect for the fund. FDI exposure may lead to a high risk of significant capital loss. Risks associated with FDI include credit risk and counterparty risk, liquidity risk, valuation risk, volatility risk, over-the-counter transaction risks and hedging risk. There is no guarantee that the desired hedging instruments will be available or hedging techniques will achieve their desired result. In adverse situations, the use of hedging instruments may become ineffective in hedging and the fund may suffer significant losses.

5. Risks relating to distributions

- For distribution share classes with a general dividend policy, expenses will be paid out of capital rather than out of gross income. The amount of distributable income therefore increases and the amount so increased may be considered to be dividend paid out of capital; capital growth will be reduced and in periods of low growth capital erosion may occur.
- Distributions from capital may include a premium or discount which is determined by differences in the interest rates of the reference currency of the hedged share class and the fund currency. It is possible that there may be an increase in the amount of the distribution that is paid out of capital and hence a greater erosion of capital than other share classes. The distribution and net asset value of the share class may be positively or adversely affected by the differences in the interest rates of the reference currency of the hedged share class and the fund currency. The distribution and net asset value of the hedged share class may, therefore fluctuate more than, and may significantly differ from, other share classes.
- Distribution share classes with a fixed dividend policy will distribute the dividends based on a fixed amount or fixed percentage of the net asset value per share. This may result in share classes with fixed distributions either paying out both income and capital in distribution payments, or not substantially distributing all the investment income which a share class has earned.
- **You should note that in the circumstances where the payment of distributions are paid out of capital, this represents and amounts to a return or withdrawal of part of the amount you originally invested or capital gains attributable to that and may result in an immediate decrease in the net asset value of shares.**

Is there any guarantee?

This fund does not have any guarantees. You may not get back the full amount of money you invest.

What are the fees and charges?**Charges which may be payable by you**

You may have to pay the following fees when dealing in the shares of the fund.
