

## iShares DAX<sup>®</sup> (DE)

July 2010

The **iShares DAX<sup>®</sup> (DE)** Investment Fund was launched on 27 December 2000 under German law. This simplified sales prospectus contains a summary of the most important information concerning the Fund. Please consult the full prospectus and the current annual report and semi-annual report for further information.

<b>Unit class</b>	iShares DAX <sup>®</sup> (DE). (WKN (German Securities ID No.): 593 393; ISIN: DE0005933931)
<b>Investment company</b>	The investment fund is managed by BlackRock Asset Management Deutschland AG, Max-Joseph-Str. 6, 80333 Munich, Germany.
<b>Term</b>	The Investment Fund was established for an unlimited period.
<b>Custodian bank</b>	State Street Bank GmbH Brienner Straße 59 80333 Munich, Germany
<b>Auditors</b>	KPMG AG Wirtschaftsprüfungsgesellschaft Munich Office Ganghoferstr. 29 80339 Munich, Germany
<b>Investment objective</b>	The primary objective of the iShares DAX <sup>®</sup> (DE) is to track the performance of the German stock market, as measured by the DAX <sup>®</sup> . To achieve this objective, the fund attempts to exactly replicate the German stock market index DAX <sup>®</sup> (performance index).
<b>Investment strategy</b>	The DAX <sup>®</sup> tracks the blue-chip segment, i.e., the largest German companies with the greatest turnover. The DAX <sup>®</sup> is a key index that is also recognised outside of Germany and comprises individual stocks from different sectors. The investment ratio is at least 95% of the value of the Investment Fund. The duplication ratio is at least 95% of the value of the Investment Fund. The Fund may acquire bank deposits and money market instruments worth up to 5% of the Fund's value. Futures contracts and warrants on the underlying index and on individual securities in the underlying index may be used only for the purpose of maintaining the investment ratio. The base currency is the Euro.

<b>Risk profile</b>	<p>The unit value may fluctuate. The investor may not recover the full value of his/her investment. If the index falls in value, causing the value of the unit shares in the Investment Fund to fall, the Company's Fund management will not attempt to limit losses through hedging transactions or sales of equities (i.e. the Fund is not "actively" managed). Consequently, unit holders are fully exposed to a fall in market value of their Fund units following a reduction in the Underlying Index. Due to the close link between the Investment Fund and the Underlying Index and because certain issuer and investment limits may be exceeded as a result, risk will only be diversified to a limited extent. You can obtain a more extensive description of the risks involved in the full sales prospectus.</p>
<b>Market risk</b>	<p>The price or market value performance of financial products is especially dependent on the movements in the capital markets, which in turn are influenced by the general state of the global economy and by the economic and political conditions in the respective countries. Negative price and market developments lead to a reduction in the price and value of these financial products.</p>
<b>Risk of default</b>	<p>The default of an issuer or of counterparty may result in losses for the Investment Fund. Issuer risk describes the effect of the particular developments impacting the respective issuer which, in addition to the general trends on the capital markets, have an effect on the price of a security. Even if securities are carefully selected, losses may result if issuers become insolvent. Counterparty risk relates to the risk that a counterparty to a contract partially or completely defaults on his/her liabilities. This applies to all contracts that are entered into on behalf of an Investment Fund.</p>
<b>Currency risk</b>	<p>The value of assets denominated in foreign currencies is subject to fluctuations in price.</p>
<b>Concentration risk</b>	<p>The Underlying Index of the Investment Fund focuses on investments in a particular national market. This makes the Investment Fund exclusively dependent on the performance of this national market and not on the overall market.</p>
<b>Risk reference when using derivatives</b>	<p>The Company may trade in derivatives on behalf of the Investment Fund to maintain the cash quota pursuant to §11 par. 6 of the "General Terms and Conditions". This may, on occasion, increase the risk of loss for the Investment Fund.</p>
<b>Special reference for increased volatility</b>	<p>The iShares DAX® (DE) does not entail any increased volatility.</p>
