Risk profile         The unit value can fluctuate. Investors may not recover the full value of their investment. If the index fails in value, causing the value of the Investment Fund to fail, the Company's fund management will not attempt to limit losses through hedging transactions or sales of equilies (i.e. the fund is not "actively" managed). Consequently, unit holders are fully exposed to a fail in market value of their fund units in the event of a decline in the underlying index. Because of the close link between the Investment Fund and the underlying index and because certain issuer and investment limits may be exceeded as a result, risk will only be diversified to a limited extent. You can obtain a more extensive description of the risks involved in the full prospectus.           Market risk         The price or market performance of financial products is especially dependent on the movements in the capital markets, which in turn are influenced by the general state of the global economy and by the economic and political conditions in the respective countries. Negative price and market developments lead to a reduction in the price and value of these financial products.           Currency risk         The value of assets denominated in foreign currencies is subject to price fluctuation.           Concentration risk         The value of anset or of counterparty may result in losses for the Investment Fund exclusively dependent on the performance of this national market, and not on the overall market.           Risk of default         The default of an issuer or of counterparty may result in losses for the Investment Fund. Issuer risk describes the effect on the price of a security. Even if securities are carefully selected, losses may result if issuers become insolvent. Counterparty risk is the risk that a counterparty to a contract parti		
dependent on the movements in the capital markets, which in turn are influenced by the general state of the global economy and by the economic and political conditions in the respective countries. Negative price and market developments lead to a reduction in the price and value of these financial products.Currency riskThe value of assets denominated in foreign currencies is subject to price fluctuation.Concentration riskThe underlying index of the Investment Fund concentrates investments on a particular national market. This makes the Investment Fund exclusively dependent on the performance of this national market, and not on the overall market.Risk of defaultThe default of an issuer or of counterparty may result in losses for the Investment Fund. Issuer risk describes the effect of the particular developments concerning the respective issuer which, in addition to the general trends on the capital markets, have an effect on the price of a security. Even if securities are carefully selected, losses may result if issuers become insolvent. Counterparty risk is the risk that a counterparty to a contract partially or completely defaults on its liabilities. This applies to all contracts that are entered into on behalf of an Investment Fund.Risk notice for the use of derivativesThe Company may conduct transactions with derivatives on behalf of the Investment Fund to maintain the cash ratio as defined by § 11(6) of the General Terms and Conditions. This may on occasion increase the risk of loss for the Investment Fund.Special notice forThere is no increased volatility with the iShares Nikkei 225® (DE).	Risk profile	of their investment. If the index falls in value, causing the value of the Investment Fund to fall, the Company's fund management will not attempt to limit losses through hedging transactions or sales of equities (i.e. the fund is not "actively" managed). Consequently, unit holders are fully exposed to a fall in market value of their fund units in the event of a decline in the underlying index. Because of the close link between the Investment Fund and the underlying index and because certain issuer and investment limits may be exceeded as a result, risk will only be diversified to a limited extent. You can obtain a more extensive description of the risks involved in the full

## Simplified Prospectus

Performance	Average annual performance of the Investment Fund:
	<ul> <li>1-year period: 20,22% (01/01/2009 - 31/12/2009)</li> <li>3-year period: -14,23% (01/01/2007 - 31/12/2009)</li> <li>From inception on 5 July 2006 to 31 December 2009: -9,65%</li> <li>Past performance of the Investment Fund is not a predictor of future results for the Investment Fund.</li> </ul>
Profile of a typical investor	An investment in the Investment Fund is suitable for investors who already have some experience in the financial markets. Investors must be willing and able to accept substantial fluctuations in the value of the units and the possibility of a significant loss of capital. The investment horizon should be at least five years.
Tax basis	The Investment Fund is tax-exempt in Germany. The tax treatment of fund income for the investor depends on the tax regulations applicable in individual cases. A tax consultant should be consulted for information about investors' individual tax charges (particularly persons not resident for tax purposes). You can obtain details about tax treatment of this Investment Fund from the full prospectus.
