<ul style="list-style-type: none"> The Fund may invest in derivative instruments including swap agreements, futures, options on futures and structured notes and commodity index-linked notes, which enable it to gain exposures to any of the indices and sub-indices referencing commodities (including any index within the Dow Jones-UBS Commodity family of indices) which meet with the requirements of and have, where necessary, been cleared by the Central Bank of Ireland. The Fund may also invest in common and preferred stocks as well as convertible securities of issuers in commodity-related industries. The Fund does not make direct investments in physical commodities and will typically seek to gain exposure to an index by entering into swap agreements. Assets not invested in commodity index-linked derivative instruments may be invested primarily in investment grade global Fixed Income Instruments. The Fund may invest up to 10% of its assets in Fixed Income Instruments that are rated lower than Baa by Moody's or lower than BBB by S&P but rated at least B by Moody's or S&P (or, if unrated, determined by the Investment Adviser to be of comparable quality).

KEY RISKS

<p>WHAT ARE THE KEY RISKS OF THIS INVESTMENT?</p> <p>The value of Shares of the Fund can go down as well as up and an investor may not get back the amount invested. ---	---

Market and Credit Risks

<ul style="list-style-type: none"> The Fund is subject to credit risk as it could lose money if the issuer or guarantor of a Fixed Income Security in which it invests, or counterparty to a derivatives contract, is unable or unwilling to meet its financial obligations. The Fund is subject to currency risk as changes in exchange rates between currencies or the conversion from one currency to another may cause the value of the Fund's investments to diminish or increase. The Fund is subject to interest rate risk as the value of Fixed Income Securities held by the Fund is likely to decrease if nominal interest rates rise. 	
--	--

Liquidity Risks																																													
<ul style="list-style-type: none"> The Fund is exposed to liquidity risk where it invests in derivative instruments which are difficult to purchase or sell. If a derivative transaction is particularly large or if the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price. The Fund is not listed in Singapore and you can redeem only on Dealing Days. There is no secondary market in Singapore for the Fund. 																																													
Product-Specific Risks																																													
<ul style="list-style-type: none"> The Fund's use of derivative instruments is subject to the derivatives risks described in the Prospectus, such as liquidity risk, interest rate risk, market risk, credit risk and management risk. Derivatives will typically be used as a substitute for taking a position in the underlying asset. The Fund is subject to global investment risk as securities of certain international jurisdictions may experience more rapid and extreme changes in value. The Fund may be subject to high yield risk such as greater levels of interest rate, credit and liquidity risks than Funds that do not invest in such securities. The Fund's investment in commodity index-linked derivative investments may subject the Fund to greater volatility than investments in traditional securities.
