

HSBC Global Investment Funds

GEM DEBT TOTAL RETURN

Monthly report 31 January 2024 | Share class M1D

Investment objective

The Fund aims to provide long term capital growth and income by investing in a portfolio of emerging markets bonds.

Investment strategy

The Fund is actively managed. The Fund employs a Total Return strategy which has a flexible allocation across the emerging market debt universe. Through seeking multiple sources of return the strategy aims, over an investment cycle, to achieve risk-adjusted returns above those of the investment universe. However, your capital is still at risk and there is no guarantee of stable growth over time. In normal market conditions, the Fund will mostly invest its assets in investment grade bonds and non-investment grade bonds issued by governments, government-related entities, supranational entities and companies that are based in or carry out the larger part of their business in emerging markets. The Fund may invest up to 10% in onshore Chinese bonds which are issued within the People's Republic of China and traded on the China Interbank Bond Market. The Fund may invest up to 25% in convertible bonds. The Fund may also invest up to 10% of its assets in contingent convertible securities. The Fund may invest up to 10% in other funds and up to 10% in total return swaps. The Fund's primary currency exposure is to US dollars (USD). See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The value of investments and any income from them can go down as well as up and you may not get back the amount originally invested.
- Investing in assets denominated in a currency other than that of the investor's own currency exposes the value of the investment to exchange rate fluctuations
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.

Share class details

Key metrics

NAV per share	USD 10.22
Performance 1 month	-0.31%
Yield to maturity	8.68%

Fund facts

UCITS V compliant	Yes
UK reporting fund status (UKRS)	Yes
ISA eligible	Yes
Dividend treatment	Distributing
Distribution frequency	Annually
Dividend ex-date	31 May 2023
Dividend yield ¹	3.93%
Last paid dividend	0.401625
Dealing frequency	Daily
Valuation time	17:00 Luxembourg

Risk disclosures

- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
