INVESTMENT UNIVERSE

The fund mainly invests in bonds issued by governments (or related bodies) in the OECD, including bonds with a low rating. Investments in securities not denominated in euros are hedged against this currency (thereby offsetting or significantly reducing the exchange rate risk). The fund may use derivatives in order to take advantage of or hedge against market fluctuations, or for efficient portfolio management. In the active management of the sub-fund, the manager selects securities with the potential for an advantageous return in relation to the risk incurred on the basis of criteria that are both financial and related to sustainable development (such as, for example, respect for the environment or socially equitable governance). This is an actively managed fund with no benchmark.

- If you place a request to sell (redeem) shares at a time when this product has received many other sell requests, the processing of your order may be delayed, which could affect the price you receive for your shares.
- We refer to the prospectus and KID for more explanation and a complete overview of the risks.
