SPECIFIC RISKS

- ◆ **Liquidity risk:** Liquidity risk exists when particular investments are difficult to purchase or sell. This can reduce the Fund's returns because the Fund may be unable to transact at advantageous times or prices.
- ◆ **Counterparty risk:** As the Fund uses over-the-counter derivatives, there is a risk that the counterparty to the transactions will wholly or partially fail to honour its contractual obligations. This may result in a financial loss to the Fund.
- ◆ Full details of risks are disclosed in the chapter "Risk Factors" in the prospectus.

Portfolio invested in equities issued by companies based in Japan

ABOUT THE FUND

The Fund seeks to grow your capital and generate income primarily by investing in Japanese equities. It is an actively managed, concentrated portfolio of stocks mainly denominated in Japanese Yen.

The Fund invests in stocks that we believe will rise in value over the long term. It invests in stocks that fit into one or more of the following themes:

small & mid-sized companies; low valuations; fallen angels (stocks that have fallen sharply in value but that we believe will recover); and stocks that could rise in value due to mergers or acquisitions.

The minimum market capitalization of selected companies will be JPY 10 billion.

Since launch. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise. Past performance figures are stated in the currency of the share class and calculated with dividends reinvested; they are free of ongoing charges. The calculation does not take into account sales commissions and other fees, taxes and applicable costs to be paid by the investor. For example, with an investment of EUR 100, the actual investment would amount to EUR 99 in the case of an entrance fee of 1%. At investor level, additional costs may also be incurred (e.g. front-end load or custody fee charged by the financial intermediary).

GLOSSARY

- Benchmark**
Index used as basis for measuring the performance of an investment fund. Also called reference index or comparison index.
- Derivatives**
Derivatives are financial instruments whose prices depend on the price movements in a reference variable, known as the underlying. Underlying assets may be shares, equity indices, government bonds, currencies, interest rates, commodities like wheat and gold, or

also swaps. Derivative financial instruments may be unconditional forward transactions or they may be options. They are traded either on futures and options exchanges on standardised terms, or over-the-counter (OTC) on freely negotiated terms. Changes in the price of the underlying lead in certain situations to considerably higher price fluctuations in the derivative. Derivatives can be used to hedge against financial risks, to speculate on price changes (trading) or to take advantage of price differences between markets (arbitrage).
