

DNCA INVEST CREDIT CONVICTION

FLEXIBLE CREDIT

Investment objective

The Sub-Fund's investment objective is to maximize the total return from a combination of income and capital growth by investing in fixed income securities. The Sub-Fund seeks to outperform the Bloomberg Euro-Aggregate Corporate Index (Bloomberg ticker: LECPTREU Index) on the recommended investment period.

To achieve its investment objective, the investment strategy is based on active discretionary management.

Financial characteristics

NAV (€)	165.62

Portfolio managers comments

In March, the investment grade credit market performed well (-8 bps spread tightening and +1.22% absolute performance) against a backdrop of easing interest rates and positive technical factors. Less well off, high yield suffered from numerous idiosyncratic risks (+12 basis points spread widening for just +0.44% performance) with issues such as SFR, Atos and Intrum (all downgraded by rating agencies over the last two months). The telephone operator suffered from disappointing results accompanied by poor communication from Patrick Drahi and strategic choices that look likely to be painful for creditors. Atos saw its rating downgraded by S&P following the breakdown of negotiations with Airbus over the purchase of its Big Data business, and Intrum has appointed advisers to manage its upcoming debt maturities... Good stock selection therefore remains essential in our markets.

In terms of sectors, we are seeing differences in behaviour on the European market, with high beta outperforming the more defensive sectors again this month. Subordinated debt (-12 bps for banks and -10 bps for corporates) is outperforming, while the technology (-3 bps) and transport (-4 bps) sectors are struggling.

Against this backdrop, the fund generated a positive performance of 1.27%, slightly outperforming its benchmark (5) thanks to an appropriate sector allocation despite a lower duration.

The sectors that contributed most to performance were banks (especially the additional tier 1 part, excluding Raiffeissen, which suffered from US threats), insurance (especially the GBP-denominated subordinated part) and real estate (good performance by Unibail and Aroundtown subordinated bonds). Some names suffered on the high-yield side, notably Gruenthal, Ephios (acquisition of Partner) and Basic Fit (following a disappointing outlook at the time of the latest results).

On the movement side, we sold our positions in names that had performed well in recent months, such as Verallia, RCI banques, Iliad and Canpack. We deployed some of the inflows in the banking and insurance sectors, as well as in goods and services. We also invested some of this liquidity in money market funds and short German debt securities.

We have continued to strengthen the names and sectors that we find interesting (PKO, Rabobank, Logicor, Aroundtown, Volitalia, etc.).

We still prefer to carry via subordinated debt and high yield. Our duration remains at around 3 years. The fund also has a responsibility score.

Internal extra-financial analysis

ABA coverage rate⁺ (87.9%)

Average Responsibility Score: 5.0/10

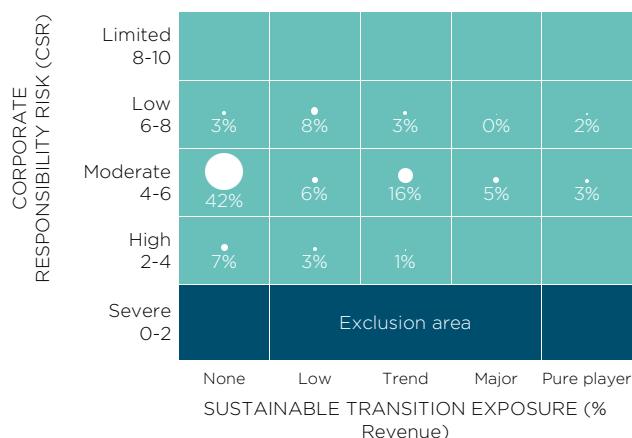

Responsibility risk breakdown⁽¹⁾

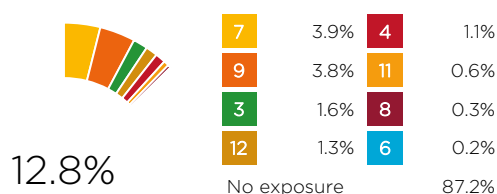

Selectivity universe exclusion rate

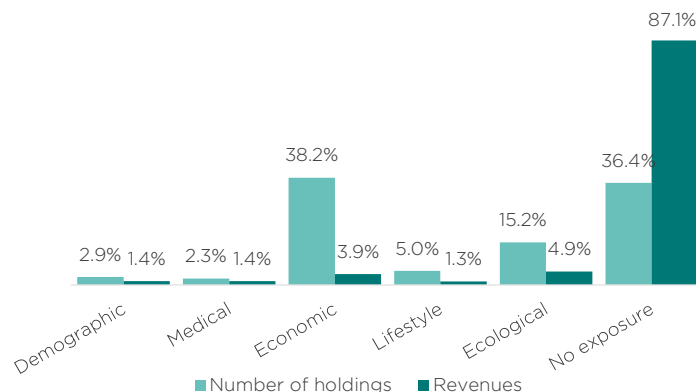

Transition/CSR exposure⁽²⁾

SDG's exposure⁽³⁾ (% of revenues)

Sustainable transitions exposure⁽⁴⁾

Analysis methodology

We develop proprietary models based on our expertise and conviction to add tangible value in the selection of portfolio securities. DNCA's ESG analysis model, Above & Beyond Analysis (ABA), respects this principle and offers a rating that we control the entire construction. Information from companies is the main input to our rating. The methodologies for calculating ESG indicators and our responsible investor and engagement policy are available on our website [by clicking here](#).

⁽¹⁾ The rating out of 10 integrates 4 risks of responsibility: shareholder, environmental, social and societal. Whatever their sector of activity, 24 indicators are evaluated, such as social climate, accounting risks, suppliers, business ethics, energy policy, quality of management.

⁽²⁾ The ABA Matrix combines the Responsibility Risk and the Sustainable Transition exposure of the portfolio. It allows us to map companies to be mapped using a risk/opportunity approach.

⁽³⁾ 1 No poverty. 2 Zero hunger. 3 Good health and well-being. 4 Quality education. 5 Gender equality. 6 Clean water and sanitation. 7 Clean and affordable energy. 8 Decent work and economic growth. 9 Industry, innovation and infrastructure. 10 Reduced inequalities. 11 Sustainable cities and communities. 12 Sustainable consumption and production. 13 Tackling climate change. 14 Aquatic life. 15 Terrestrial life. 16 Peace, justice and effective institutions. 17 Partnerships to achieve the goals.

⁽⁴⁾ 5 transitions based on a long-term perspective of the financing of the economy allow the identification of activities with a positive contribution to sustainable development and to measure the exposure of companies in terms of turnover as well as exposure to the UN Sustainable Development Goals.

*The coverage rate measures the proportion of issuers (equities and corporate bonds) taken into account in the calculation of the extra-financial indicators. This measure is calculated as a % of the fund's net assets adjusted for cash, money market instruments, derivatives and any vehicle outside the scope of "listed equities and corporate bonds".

This product promotes environmental or social characteristics, but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.

This product is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment.

If the portfolio investment process can incorporate ESG approach, the portfolio's investment objective is not primarily to mitigate this risk. The sustainability risk management policy is available on the website of the Management Company.

The reference benchmark as defined in the Regulation 2019/2088 (article 2(22)) does not intend to be consistent with the environmental or social characteristics promoted by the fund.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
