

HSBC Global Investment Funds

GLOBAL BOND

Monthly report 31 January 2024 | Share class IC

Investment objective

The Fund aims to provide capital growth and income by investing in a diversified portfolio of investment grade rated bonds and other similar securities from around the world, while promoting environmental, social and governance (ESG) characteristics. The Fund qualifies under Article 8 of SFDR.

Investment strategy

The Fund is actively managed. The Fund will invest primarily in securities issued in developed markets and denominated in developed market currencies. The Fund may invest up to 20% of its assets in non-investment grade bonds and up to 20% in bonds issued in emerging markets. The Fund may invest up to 10% in bonds issued by any single government issuer with a non-investment grade rating. The Fund will not invest in bonds issued by companies with involvement in specific excluded activities, such as: companies involved in the production of controversial weapons and tobacco; companies with more than 10% revenue generated from thermal coal extraction; and companies with more than 10% revenue generated from coal-fired power generation. The Fund may invest up to 10% of its assets in onshore Chinese bonds, invest up to 30% in asset backed securities and mortgage-backed securities, up to 10% in contingent convertible securities and up to 10% in other funds. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.

Monthly performance commentary

Performance review

The fund's absolute performance was negative but relative performance was positive in January. Rates positioning was slightly negative as the negative contribution from the overall duration overweight mainly in the US, Australia and New-Zealand. This was partly offset by the positive contribution from the US curve steepener as well as relative country allocation. The US curve continued to steepen as the 30y underperformed while short Canada and short Japan were positive. EM local rates such as Mexico also deteriorated from performance slightly. Asset allocation and security selection contributed positively to performance as a result of the overweight in ABS and overall corporate spreads tightening, especially in Europe where the fund has an overweight versus the US.

FX performance was negative as the broad USD rebounded sharply as the market priced out a March rate cut, given Fed speakers pushing back on that front and a very resilient US economy.

Strategy

Over January, we added a US 10s30s steepener. We cut our UK 10s30s flattener position and short ITL vs Germany 10yr. In FX, we closed out our short GBP versus USD and long EUR vs USD.

Risk Disclosure

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Investment involves risk. Past performance figures shown are not indicative of future performance. Investors should read the prospectus (including the risk warnings) and the product highlights sheets, before investing. Daily price change percentage is based on bid-bid price.

Different classes may have different performances, dividend yields and expense ratios. For hedged classes, the effects of hedging will be reflected in the net asset values of such classes. Expenses arising from hedging transactions may be significant and will be borne by the relevant hedged classes. Hedged class performs the required hedging on a best efforts basis.

The above table cites the last dividend paid within the last 12 months only. Dividend is not guaranteed and may be paid out of capital, which will result in capital erosion and reduction in net asset value. A positive distribution yield does not imply a positive return. Past distribution yields and payments do not represent future distribution yields and payments. Historical payments may comprise of distributed income, capital, or both.

The calculation method of annualised yield prior to August 2019 is the simple yield calculation: (dividend amount / NAV per share or units as of ex-dividend date) x n; The calculation method of annualised yield from August 2019 is the compound yield calculation: $((1 + (\text{dividend amount} / \text{ex-dividend NAV}))^n - 1)$, n depends on the distributing frequency. Annually distribution is 1; semi-annually distribution is 2; quarterly distribution is 4; monthly distribution is 12. The annualised dividend yield is calculated based on the dividend distribution on the relevant date with dividend reinvested, and may be higher or lower than the actual annual dividend yield.

Investors and potential investors should refer to the details on dividend distributions of the Fund, which are available on HSBC Asset Management (Singapore) Limited website.
