

## FUND FACTSHEET

# OSTRUM SOUVERAINS EURO

SEPTEMBER 2020

### FUND HIGHLIGHTS

- Invests exclusively in supranational and government bonds issued or guaranteed by euro-zone countries.
- Seeks to add value through security selection, yield curve positioning, active management of modified duration and diversification with inflation-linked bonds
- Implements a qualitative and opportunistic approach to investing in euro-zone sovereign debt, but also relies on in-house quantitative analysis
- Relies on the "Sovereign Debt Selection" sector team's analysis of each euro-zone country and maturity segment to multiply the sources of performance

### ILLUSTRATIVE GROWTH OF 10,000 (EUR)

### CALENDAR YEAR RETURNS %

TOTAL RETURNS	Fund %	Index %
1 month	1.35	1.45
3 months	1.81	1.72

3 years	3.55	4.09
5 years	2.66	3.12
10 years	4.17	4.13
Since inception	4.84	4.68

PERFORMANCE DATA SHOWN REPRESENTS PAST PERFORMANCE AND IS NOT A GUARANTEE OF FUTURE RESULTS. Some recent performance may be lower or higher. As the value of the capital and the returns change over time (notably due to currency fluctuations), the repurchase price of the shares can be higher or lower than their initial price. The performance indicated is based on the NAV (net asset value) of the share class, and is net of all charges applying to the fund but does not account for sale commissions, taxation or paying agent fees, and assumes that dividends if any are reinvested. Taking such fees or commissions into account would lower the returns. The performance of other share classes would be higher or lower based on the differences between the fees and the entry charges. In the periods where certain share classes are not subscribed or not yet created (inactive share classes), performance is calculated based on the actual performance of an active share class of the fund whose characteristics are considered by the management company as being closest to the inactive share class concerned, after adjusting it for the differences between the total expense ratios (TER), and converting any net asset value of the active share class in the currency in which the inactive share class is listed. The performance given for the inactive share class is the result of a calculation provided for information. Please read the important information given in the additional notes at the end of this document.

## Score SDG Index

SDG Index for Sovereign and Similar Issuers :

This is a numerical score between 0 and 100, the best being 100. The SDG Index tracks the progress made by countries in their pursuit of the 17 United Nations sustainable development goals (SDGs).

SDG Index Score Scale: 100 being the highest score, 0 the lowest score

## FUND MANAGER'S COMMENT

### Economic context:

The health crisis is not over yet, and neither is the economic crisis. The catch-up effect of post-confinement economic activity is running out of steam as services have been slow to pick up the slack due to continued health constraints.

In the United States, the recovery's sustainability will depend mainly on the extension of the Covid-19 recovery plan that is currently at a standstill in Congress. Republicans and Democrats have absolutely no interest in reaching an agreement before the elections on 3 November. In the eurozone, the introduction of public health restrictions linked to fears of the epidemic's resurgence are thwarting the recovery, particularly in countries whose activity depends heavily on tourism. In the United Kingdom, negotiations are foundering and the prospects of a "no deal" are mounting. In China, the recovery is unbalanced, thus threatening its sustainability. The epidemic in China left 174 million migrant workers without income and employment, adversely impacting consumer spending. Chinese authorities stepped up the development of their domestic bond market in order to attract capital for companies thereby taking some of the pressure off the banking sector where risks have been concentrated. In the emerging countries of Latin America and in India, there is a serious health problem that they are unable to solve owing to their populist tendencies. Governments will do anything to preserve their electoral mandate.

Monetary policy in the major money markets remains accommodative, although uncertainty is growing. In the eurozone, the risk of deflation is becoming more acute. Underlying inflation in the eurozone is at an all-time record low of +0.2% while the reference inflation rate is -0.3% due to the continued strong negative impact of oil prices. The ECB made considerable efforts to push inflation to 2% to no avail. The European monetary institution is not so far removed from the Fed, which relaxed its inflation target hoping to meet it only in the medium term. Emerging country central banks meanwhile have limited room for manoeuvre due to their low real interest rates limiting investors' appetite for their currencies. As a matter of urgency, the Central Bank of Turkey raised its key interest rate by +200bps to 10.25%. This was aimed at curbing the collapse of its currency, which reflects the fall in foreign exchange reserves, high and persistent inflation, and the country's poor economic prospects.

September marked the end of a period of heightened enthusiasm for the S&P 500 and Nasdaq stock market indices. This was linked to the fall of the technology giants that had driven their rise. This was a reflection of investors' repositioning towards the sectors that suffered the most from the pandemic. In Europe, stock market indices experienced more chaotic behaviour due to fears of a deterioration in the health situation, exemplified by the MSCI Europe Index (ex UK) that recorded a timid performance of just +1.8% in Q3 compared to the S&P 500's +8.9%. In the fixed income markets, sovereign bond yields held broadly stable over the quarter, reflecting the extremely accommodative monetary policy. The US 10-year interest rate ended the quarter at 0.7%. As for Europe, Italian sovereign bonds posted the best performance for the quarter at +3.4%. UK sovereign bonds recorded the worst quarterly returns at -1.3%, reflecting the prospect of a "no deal" Brexit, resulting also in a 3% depreciation of sterling against the dollar. On foreign exchange markets, the weakness of the dollar resulted in a strengthening of the euro, increasing fears of eurozone deflation. The yuan also achieved its best quarterly performance against the dollar in more than a decade, reflecting the country's relatively high interest rates. In the emerging markets, the currencies of those countries unable to emerge from the health crisis, such as Brazil, depreciated against the greenback.

### Management:

Germany's 10-year bond rate moved in the opposite direction in August. It was down by 12bps over the period hitting -0.52% thus returning to its 31 July level. The 10-30 year curve segment in euros also retraced the month of August, flattening from 4 bps to 42 bps.

At the beginning of the month, we were expecting a continuation of the recovery seen this summer. We therefore anticipated slightly higher rates. We reduced our duration to achieve 95%. The downturn in US equities, comments by chief economist Philip Lane on the importance of the exchange rate, and zero inflation led to a knee-jerk decline in the German rate. We preferred gradually increasing our exposure to reach 98%.

During the month, successive sessions of declines in equities favoured the purchase of bonds and a return of the German 10-year rate to its end of July level. Political deadlines, volatility, the economic slump, new health measures, and falling equities led us to return to lower rates. Thus, we gradually increased our exposure again to attain 102%.

On 21 September, amid the stress on peripheral country equities and debt, we preferred reducing part of our overweighting to return later at a higher level. Thus, we closed out our Spanish exposure with the sale of 12 cts of duration. S&P lowered the outlook for Spanish debt, however, at the same time we increased our position as the Spanish curve flattened by selling Spanish 2030 and buying Spanish 2066. We also reduced our exposure to Italy by 10 cts.

Italian debt retraced its spread from the previous day and continues to tighten. Indeed, central bank intervention programmes continue to fuel this tightening of the sovereign debt. As Greek debt was just treading water this week, we increased by 5 cts our position initiated at the beginning of September on a bond maturing in 2030.

We suffered a loss of 5bps in performance over the period, broken down as follows. The directional positioning and that of the curve made a negative contribution of 6bps of performance over the month. The allocation made a positive contribution of 5bps largely attributable to the Italian position. The diversification strategy focused on inflation cost 3 bps of performance.

### Illustrative Growth of 10,000

The graph compares the growth of 10,000 in a fund with that of an index. The total returns are not adjusted to reflect sales charges or the effects of taxation, but are adjusted to reflect actual ongoing fund expenses, and assume reinvestment of dividends and capital gains. If adjusted, sales charges would reduce the performance quoted. The index is an unmanaged portfolio of specified securities and cannot be invested in directly. The index does not reflect any initial or ongoing expenses. A fund's portfolio may differ significantly from the securities in the index. The index is chosen by the fund manager.

### Risk Measures

The risk and reward indicator is shown as a scale of 1 to 7 representing the levels of risk and rewards in increasing order that enables you to assess the potential performance of a fund compared to the risk it represents. The general calculation method of this regulatory indicator is based on the annualized past volatility of the fund, calculated from weekly returns over a five-year period. This indicator is monitored regularly and may vary. The SRRI level indicated in this document is the level in force on the date the document was drawn up.

### Special Risk Considerations

The specific risks involved in investing in the Fund are the following risks:

- Capital loss risk
- Risk related to temporary purchases and sales of securities and the management of collateral
- Interest rate risk
- Credit risk
- Inflation impact risk
- Exposure risk
- Discretionary management risk
- Counterparty risk

A complete description of these risks is given in the chapter entitled "Main Risks" in the prospectus. This chapter also describes the other risks involved in investing in the Fund.

### Reference Index

The Sub-Fund is actively managed. The Reference Index is used for comparison purposes only. The Delegated Investment Manager remains free to choose the stocks that make up the portfolio in accordance with the Sub-Fund's investment policy.

### Portfolio Statistics

#### Volatility

Extent of change of a security or stock, fund, market or index over a given period. High volatility is indicative of a significant change in the share price, and therefore the risk associated with the security is high.

#### Information ratio

Indicator of the outperformance of the manager (with respect to the benchmark), given the additional risk taken by the manager with respect to the same index (fund's tracking error). The higher the value, the better the fund.

#### Tracking error

Measurement of the relative risk taken by a fund with respect to its benchmark.

#### Sharpe ratio

Outperformance indicator of a product with respect to a risk-free rate, given the risk accepted (product volatility). The higher the value, the better the fund.

#### Modified Duration

Indicator of a bond's interest rate risk, and shows changes in the value of a bond as interest rates fluctuate. Modified duration varies inversely against interest rates. E.g.: for a modified duration of 5, if interest rates fall by 1%, the value of the bond increases by 5%.

### Morningstar Rating and Category

#### Morningstar Rating and Category

© 2020 Morningstar. All Rights Reserved. The information, data, analyses and opinions ("Information") contained herein (1) include Morningstar's confidential and proprietary information (2) may not be copied or redistributed, (3) do not constitute investment advice (4) are provided solely for informational purposes (5) are not warranted to be complete, accurate or timely and (6) are drawn from fund data published on various dates. The information is provided to you at your own risk. Morningstar is not responsible for any trading decisions, damages or other losses related to the Information or its use. Please verify all of the Information before using it and don't make any investment decision except upon the advice of a professional financial adviser. Past performance is no guarantee of future results. The value and income derived from investments can go up or down. The Morningstar rating applies to funds having at least 3 years of history. It takes into account subscription fee, the yield without risk and the standard deviation to calculate for every fund its ratio MRAR (Morningstar Risk Adjust Return). Funds are then classified in decreasing order by MRAR: first 10 per cent receive 5 stars, the following 22,5 % 4 stars, the following 35 % 3 stars, following 22,5 % 2 stars, the last 10 % receive 1 star. Funds are classified within 180 European categories.

Natixis Investment Managers International - a portfolio management company authorized by the Autorité des Marchés Financiers (French Financial Markets Authority - AMF) under no. GP 90-009, and a public limited company (société anonyme) registered in the Paris Trade and Companies Register under no. 329 450 738. Registered office: 43 avenue Pierre Mendès France, 75013 Paris. Ostrum Asset Management, subsidiary of Natixis Investment Managers, is a French asset manager approved by the French market regulator, AMF (number GP18000014). Any products, services or investments referred to herein that require authorization or license are rendered exclusively outside of Mexico. Natixis Investment Managers is an entity organized under the laws of France and is not authorized by or registered with the CNBV or any other Mexican authority to operate within Mexico as an investment manager in terms of the Mexican Securities Market Law (Ley del Mercado de Valores). Any use of the expression or reference contained herein to "Investment Managers" is made to Natixis Investment Managers and/or any of the investment management subsidiaries of Natixis Investment Managers, which are also not authorized by or registered with the CNBV or any other Mexican authority to operate within Mexico as investment managers.

This document may contain references to copyrights, indexes and trademarks that may not be registered in all jurisdictions. Third party registrations are the property of their respective owners and are not affiliated with Natixis Investment Managers or any of its related or affiliated companies (collectively "Natixis"). Such third party owners do not sponsor, endorse or participate in the provision of any Natixis services, funds or other financial products
