**MANAGERS :**

Emmanuel NAAR

Emmanuel CUCHE

**INVESTMENT POLICY**

The fund seeks to outperform the FTSE Europe Focus Convertible Index. To attain this objective, the strategy will rely on an active management of interest rate risk (active management of sensitivity), currency and credit risks (based on the securities rating) and on our stock-picking approach. Sensitivity will be managed on a scale of 0 to 7. Portfolio will be composed as follows: 1/ up to 110% maximum of fungible convertible bonds, exchangeable bonds, bonds with equity warrants, corporate and financials traded debt and sovereign debt. The fund will be able to invest in both investment grade and high yield convertible bonds; 2/ up to 10% maximum in French law money-market and bond funds (whether or not UCITS-compliant); 3/ up to 10% maximum in equities resulting from a conversion.

**FUND MANAGERS COMMENT**

During February 2024, Lazard Convertible Europe RC EUR recorded a performance of 0.82% compared to 1.53% for its FTSE Europe Focus Convertible benchmark(ex-Refinitiv). The fund's equity sensitivity was stable in absolute and increased in relative terms, standing at 52.5% compared to 44.7% for its index at the end of the period. The increase in our equity overweight during the month had a positive impact in relative terms, however, the impact is limited due to the still moderate rise in equity markets this month. Interest rate sensitivity had a slightly negative absolute impact with higher interest rates, the relative impact was neutral. Interest rate sensitivity was stable at 1.89, in line with the benchmark. Tightening of European credit spreads had a slightly positive impact in absolute terms, the impact is neutral in relative terms. Our selections in industrial services linked to energy, consumer discretionary, and semiconductors benefited in relative terms. Our underweight to a specific name in German defense, found in our ESG exclusion list, and to the Swiss insurance industry continues to detract in relative terms. Over the period, we reduced our exposure to telecommunications and reduced our exposure to low delta names in airlines and delivery services. We increased our exposure to aerospace engineering, semiconductors linked to artificial intelligence, beverages, and industrial services. The fund maintained a neutral exposure to the dollar against the index during the month.

## Glossary

Alpha represents the return of a portfolio that is attributable to the manager's investment decisions.

Beta measures a fund's sensitivity to movements in the overall market.

Information ratio represents the value added by the manager (excess return) divided by the tracking error.

Sharpe ratio measures return in excess of the risk free rate for every unit of risk taken.

Tracking error measures the volatility of the difference between a portfolio's performance and the benchmark.

Volatility is a measure of the fund's returns in relation to its historic average.

Yield to Maturity indicates the rate of return generated if a security is held to its maturity date.

Coupon Yield is the annual coupon value divided by the price of the bond.

Average Credit Spread is the credit spread of a bond over LIBOR, taking into account the value of the embedded option.

Average Rating is the weighted average credit rating of bonds held by the Fund.

Modified Duration is the percentage change in the value of a bond resulting from a 1% interest rate change.

Average Maturity is the average time to maturity of all bonds held by the Fund.

Spread Duration is the sensitivity of a bond price to a change in spreads.

Yield is the internal rate of return of a bond if held to maturity, but not accounting for conversion features of a convertible bond.

Delta represents the sensitivity of convertible bonds held by the Fund to a change in the underlying security price.
