DJE - Asia High Dividend XP (EUR)

Investment Strategy

The fund focuses on equities and equity-like securities from the Asia-Pacific region. With a medium-to long-term investment horizon, the fund purchases equities with fundamentally favourable valuations whose dividends - based on above-average dividend yields - are expected to make a high and reliable contribution to the overall performance of the fund. With DJE - Asien High Dividend, the proven DJE dividend strategy is focused on Asia. Without reference to a benchmark, the fund uses independent research to identify high-value, frequently family-run companies which are often in a better position to cope with difficult market conditions. The fund is actively managed. This means that even high cash positions can be established with the aim of stabilising performance.

Performance in percent vs. Reference Index since inception (01/08/2008)

As at: 21/01/2016

The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method³ and illustrate past development. Future results may vary both positively and negatively. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 0.00%, he has to spend a one-off amount of Euro 0.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges. Information regarding past development is not a reliable indicator of future performance.

Minimum investment: 3,000,000 EURO

DJE - Asia High Dividend XP (EUR)

Performance in percent vs. Reference Index since inception last 5 years

Data: Bloomberg, own illustration. Calculated according to the BVI Bundesverband Investment und Asset Management e.V.) method, i.e. not taking into account the front end load. As at: 21/01/2016

Model calculation: The front end load of EUR 0.00 (0.00%) on an initial investment of Euro 1000.00 over a typical investment period of five years immediately reduces the initial investment amount. In addition performance reducing annual individual security deposit costs may result. Past performance is not a reliable indicator of future returns.

Monthly Commentary

In the Asiatic region cyclical sectors like commodities, industrial tiles and energy performed weak in December. In all this segments the DJE - Asia High Dividend is underweighted. Anyway, quite well was the development of Chinese consumer titles, particularly sport articles. Therefore the fund extended the existing position of Anta Sports Products. The company benefits currently from the good fundamental environment and shows considerable improvement in the field of sport shoes and sports outfits. Also bought was the share of LG Chemical, a chemical enterprise based in South Korea. LG Chemical is well positioned in the growing battery market and has its costs under control. The Chinese insurance holding PICC Property & Casualty is a defensive investment of the financial sector which is suitable for the defensive directed DJE - Asia High Dividend. The current price regulation of the Chinese insurance market prevents competition what is positive for PICC. Also decreased was the position of Hengdeli Holdings after the company had announced again shrinking sales of watches and other luxury goods in China mainland and in Hong Kong. Also on the sales list was the DBS Group. The financial holding which is based in Singapore has been dealing in credits for China during the last years. Therefore the loan book will be negatively influenced by the growth slowdown of China. Positive for the fund's performance on the other side were titles like Texwinca, Kingboard Laminates, Indofood and Guangdong Investments. On the other side slowed down was the performance of the fund by Glorious Sun, Aeon Credit, Peak Sports and KT & G. Regionally Chinese shares listed in Hongkong hold with 48% the highest proportion of the portfolio, followed by South Korea (12%), Japan (11%), Thailand (5.5%) and Taiwan (3%). By month end the DJE - Asia High Dividend was invested 83% in shares. Its cash quota was 17%. With its investments decisions and allocations the fund registered in December a negative performance in height of -3.35% The corresponding benchmark MSCI Daily TR AC Far East Ex Japan Net USD in Euro lost -4.15%.

DJE - Asia High Dividend XP (EUR)

DJE Kapital AG

The DJE Kapital AG has more than 40 years experience in wealth management and is one of the leading bank independent wealth and asset managers in Germanspeaking Europe. Our investment strategy is based on a threedimensional approach, the FMM-Methodology. It takes three views on the stock exchange and financial markets: fundamental, monetary and market-technical.

Target Group

The fund is suitable for investors

- + with a medium to long-term investment horizon
- + who seek to focus their equity investments on stocks that pay dividends
- + who wish to reduce risk compared to a direct investment

The fund is not suitable for investors

- with a short-term investment horizon
- who seek safe returns
- who are not prepared to accept increased volatility

Investment Approach

The well-established investment approach of the DJE dividend strategy is based on the recognition that, in the long term, most of the overall performance of an equity investment comes from the compounding effect generated by reinvested dividends. This requires the detailed analysis of individual companies, because dividend yields should be more than just high – they should also be paid consistently. The fund makes targeted investments in companies in the emerging Asian markets to take advantage of the region's attractive growth prospects. Asia's traditionally higher dividend yields, healthy, defensive balance sheets and stable and promising business models are complemented by low government and consumer debt, high savings ratios and rising wages.

The investment approach is based on three approved factors

Source: DJE Kapital AG

Opportunities and Risks

Opportunities

- + Excellent demographic developments make long-term growth in investments in Asia possible
- + The conditions for expansion in many Asian domestic economies, such as China, continue to exist
- + Traditionally higher dividend payments mean that the fund can take advantage of the compounding effect of reinvested dividends

Risks

- Equity prices may exhibit relatively strong fluctuations depending on market conditions
- Currency risks resulting from a high proportion of foreign investments
- Issuer country and credit risks
