INVESTMENT OBJECTIVE AND POLICY

The objective of the Fund is to achieve capital growth and outperform its Benchmark by investing mainly in high-yield debt securities and debt related securities denominated in Euro - seeking to capture a significant portion of the upside in this investment universe, through a responsible investment process. The Fund shall invest at least 51% in Euro denominated debt and debt-related securities of any kind, having Sub-Investment Grade Credit Rating. The issuers of securities (with the exclusion of government bonds) in which the Fund may invest will be subject to a proprietary ethical filter that excludes issuers involved in certain activities. Securities will be selected within the relevant and eligible asset classes described in the investment policy, taking into account average ESG ratings. The Investment Manager will analyse and monitor the ESG profile of securities' issuers using ESG scores sourced from an external ESG data provider. The average ESG rating of the Fund shall constantly be higher than the average ESG rating of its initial investment universe after eliminating at least 20% of initial securities ranking the worst in terms of ESG scoring.

FUND MANAGER'S COMMENTS

Market

The first half of February was dominated by growing noises that the Fed and other central banks would be forced to embark upon a much more aggressive tightening cycle than anticipated, particularly as inflation continued to surprise on the upside. But then in the second half, we saw a massive risk-off move prompted by warnings and then the reality of Russia's invasion of Ukraine, which in turn triggered severe sanctions on Russia that have had a seismic market impact across multiple asset classes. Against this backdrop, the ICE BoA BB-B Euro High Yield Index posted a negative performance of 3.23%,

Portfolio activity

We started the year with relatively high cash levels and have kept comfortable levels of dry powder so far. While HY spreads now look fairly valued versus EU equity risk premium, geopolitics is now a big short-term uncertainty to throw into the mix and chatter about recession and stagflation is intensifying. In this context, we favor moving up into quality names and we went from short to slightly long on iTraxx main exposure where bearish positioning seems overextended.

Outlook

Credit spreads have often lurched much wider than "fair value" in previous big risk-off events which suggests some caution. But we think the sell-off is likely to meet stiffer resistance: at about 4% yield, the market has built decent value in the BB-B corporate credit space. We think that at some point around or before March 10, in the next ECB GC Meeting, market participants may be looking to re-enter risk positions especially on indices. At that point, the run-up to the 20 March roll will factor in as well.

ESG Glossary

ESG Coverage: Percentage of the portfolio covered by an extra-financial analysis also called “ESG analysis” as the main pillars are: Environment, Social and Governance.

Carbon intensity (tCO₂ eq./million \$): we are referring to the equivalent of the number of tons of carbon dioxide (CO₂) that it takes to a company to make one unit of revenue (1 million \$) per year. The methodology used includes both Scope 1 and Scope 2 emissions where Scope 1 covers direct emissions from owned or controlled sources while Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating and cooling consumed by the reporting company.

ESG score: ESG scores are designed to transparently and objectively measure a company's relative extra-financial performance, commitment and effectiveness across 35 main criteria based on publicly reported data. Based on those criteria, each sector has its own materiality matrix that allows companies ESG scoring taking into account the most material issues within each sector. However, the ESG scores relies on Environment (climate change, energy efficiency...), Social (human resources management, employees' health & safety...) and Governance (composition & diversity of governance bodies, executive compensation...) pillars.

The ESG approach has the main following restraints:

- The availability of data to conduct an ESG analysis
- The quality of the data used in the assessment of ESG quality and impact as there are no universal standards related to ESG information and third party verification is not systematic
- The comparability of data, as not all companies publish the same indicators;
- The use of proprietary methodologies, which relies on the experience and skills of the asset manager's staff

For more details on the ESG investment process, ESG approach and ESG criteria, please refer to the prospectus
