Advisory company

Dear unit holder,

We are pleased to present the annual report as at 31 October 2023 for the Fund established on 22 December 2008 under the name

#### **ACATIS Datini Valueflex Fund**

## Investment objectives and investment policy for achieving the investment objectives

Investment opportunities are to be used opportunistically in the Fund in response to specific situations. The exposure is very flexible and can range between zero and 100%. The value concept is at the forefront and relates not only to equities but to all asset classes. Investments should, as a matter of principle, be made over the long term. However, the outlook for different asset classes and sub-segments is to be reviewed at regular intervals. Investments are then implemented based either on target funds or a basket of individual securities. Derivatives can be used to increase opportunities or reduce risk. If no clear opportunities can be identified, the Fund may maintain a high liquidity ratio for an extended period of time.

# Structure of the portfolio and material changes during the reporting period

The ACATIS Datini Valueflex Fund was originally established on the basis of an individual investor's requirements. One criterion dictating its structure was the desire for high entrepreneurial returns; volatility was of lesser importance. This fundamental idea still applies today. Fund management manages opportunities rather than risks, and there is no classic asset allocation or a standardized investment process. Therefore the fund is only suitable for investors with an appetite for risk, as was once more demonstrated during the reporting year. The ACATIS Datini Valueflex Fund reported the following losses for the various unit classes: -7.0% for unit class A, -7.8% for unit class B and -7.5% for unit class X.

However, since the Fund's inception in December 2008, unit class A has generated a cumulative performance of 527.1%. Unit class B has gained 215.7% since it was launched in April 2011. On the other hand, unit class X has lost 20.3% since it was launched in July 2021.

The economic environment continued to deteriorate during the year under review. High liquidity ratios, as well as a shortage of labor and goods (due to supply problems) meant that inflation rates remained high compared to previous years. Around the globe, central banks responded by gradually raising interest rates, which made bonds more attractive again. The war in Ukraine, which started in early 2022, continued to create uncertainty (mainly in the Eurozone). Nonetheless, European equity markets recovered nicely during the reporting year. The EURO STOXX 50 NR (EUR) gained 15.1% in value, compared to 11.7% for the DAX 40 TR (EUR) and 8.0% for the STOXX Europe 600 NR (EUR). In contrast, the Japanese Nikkei 225 (EUR) index, the broad American index S&P 500 TR (EUR) and the MSCI World GDR (EUR) only reported growth rates of 2.7% to 3.8%. The German bond index REXP (EUR), which reflects the performance of German government bonds, decreased slightly (-0.9%).

At the fund level, the top performer list for the reporting year was dominated by artificial intelligence (Nvidia, Palantir), crypto-currencies (Bitcoin and Ethereum) and semiconductors (XTPL, Onto Innovation). The best equities besides Nvidia (+182.6%) and XTPL (+162.9%) were Hutchison China Meditech (+106.0%), Quanterix (+83.5%) and Brazilian neobank Nu Holdings (+82.9%). The XTPL bond (+103.1%), which doubled in value, is also worth mentioning in this regard. The largest performance contributions came from Nvidia, Fortescue Metals, an Inflation Linked Note and two Bitcoin positions.

The worst performing stocks were also concentrated in certain industries, such as biotech/pharma (incl. Amyris, Idorsia, Evolva, Nabriva Therapeutics, 23andMe) and renewable energies (e.g. Aker Horizons, PlugPower and calls for NextEra Energy and Sunrun). The worst performers in the equity segment were Amyris (-98.2%), Idorsia (-86.8%), Evolva (-82.4%) and Nabriva Therapeutics (-81.6%). The software company Butterfly Network (-80.3%) was also among the five worst-performing stocks. The largest negative performance contributions came from BioNTech, the UBS certificate for 13 competitively-priced and good-quality stocks, Idorsia, Lumentum and AbCellera Biologics.

During the reporting year, fund management once again rebalanced some positions in accordance with the active management approach. New equity investments included many smaller positions as well as copper producer Aurubis and on-line payment services provider PayPal. Two new bonds each for DPL and Credit Suisse were also added to the bond portfolio. Fund management also commissioned the creation of a special convertible bond product (Phoenix Certificate) to take advantage of a normalization of distortions in the convert-

ible bond market. Significant losses in the underlying stocks had reduced the probability of a conversion.

At the end of the reporting year, the share of equities in the Fund was 64.2%, which is lower than at the start of the year (68.7%). In terms of the MSCI sectors, information technology (33.1%), health (32.9%) and raw materials and supplies (12.4%) accounted for greatest proportion. At the end of the reporting period, the largest equity positions based on fund assets were Fortescue Metals (5.0%), Nvidia (4.7%) and BioNTech (3.4%).

Compared to the beginning of the reporting year, the bond portion increased from 8.1% to 11.5%. Most bonds have no rating (94.0%) or a rating in the "BB-" range (5.6%). The great majority has a remaining term of 3-5 years (57.5%), followed by a remaining term of 1-3 years (23.5%) and 5-7 years (18.0%).

At the end of the reporting period, fund units accounted for 1.1% (-0.04%), compared to 14.9% (+6.2%) for certificates and 0.6% (-3.4%) for bank balances.

In terms of the investment objective, the Fund aims for the highest possible growth in value; it also wants to contribute towards lowering CO2 emissions. The Fund can purchase so-called decarbonization notes to promote the CO2 neutralization of the portfolio while also contributing to climate protection. To this end, the company regularly calculates the CO2 footprint for the Fund and purchases the corresponding number of decarbonization notes. The notes are securities that are issued by e.g. a bank. The bank uses the proceeds from the decarbonization notes that are issued to buy European CO2 emission rights. The issuing terms for the decarbonization note specify that up to half of the purchased European CO2 emissions rights are donated to a charitable climate protection foundation over a period of five years. This means that the value of the decarbonization notes decreases over this time period. Under the supervision of the foundation's supervisory authority, the climate protection foundation permanently removes the donated emissions rights from the market. In this way, the emission rights are effectively and actually removed from CO2 emission trading, thereby forcing emission reductions at the same amount. The portion of the CO2 emission rights that were not donated remains in the decarbonization note; they are supposed to compensate the cost associated with the removal over a period of five years as the price of the CO2 emission rights increases. The company expects that the price for emission rights will rise as the number of European emission rights is steadily reduced.

### Material risks

#### General market price risks

The development of securities prices depends in particular on the performance of the capital markets, which in turn are dependent on the general situation of the global economy as well as the economic and political conditions in the countries in question. The general development of securities prices, especially on a stock exchange, can also be affected by irrational factors, such as moods, opinions and rumors.

The Ukraine crisis and the resulting market turbulence and sanctions imposed by the industrialized nations against Russia are having a range of different effects on the financial markets in general and on funds in particular. The movements on stock exchanges are reflected accordingly in the fund assets (value of the Fund). In addition, uncertainties about the further course of the conflict and the economic consequences of the various sanctions are weighing on the markets.

#### Interest rate risks

An investment in fixed-income securities is associated with the possibility that the market interest rate level existing at the time a security is issued may change. As a rule, prices of fixed-interest securities fall when the market rates rise above the interest rates that applied at the time of issue. Similarly, if the market rate falls, the prices of fixed-interest securities rise. These price changes cause the current yield on fixed-interest securities to correspond approximately to the current market rate. However, price performance will differ according to the maturity of the fixed-interest securities. Fixed-interest securities with shorter maturities have less interest rate change/price risk than fixed-interest securities with longer maturities.

#### Default risks/Issuer risks

The Fund could suffer losses from the default of an issuer or counterparty. Issuer risk is the effect of particular developments at the issuer, which affect the price of a security separately from the general tendencies in the capital markets. Even when the utmost care is exercised in selecting the securities, losses due to the financial collapse of issuers cannot be ruled out. Counterparty risk includes the risk that a party to a mutual agreement will default on the claim, in whole or in part. This applies to all contracts entered into for the account of a fund.

#### Credit risks

In the case of bonds, a debtor's rating can change. Depending on whether the credit rating rises or falls, the price of the security may change.

#### Equity risks

Certain market risks and corporate risks are associated with the acquisition of equities. The value of equities does not always reflect the actual value of the company. There may therefore be large and rapid fluctuations in these values if market conditions and the assessments of market participants regarding the value of these investments change. In addition, the rights from equities are always satisfied subordinate to the claims of all creditors of the issuer. Therefore, equities are generally subject to greater fluctuations in value than, for example, fixed-income securities.

### Risks associated with target funds

The risks of the investment units acquired for the Fund are closely connected with the risks associated with the assets held in these Funds. Some target funds with a focus on bonds carry significant interest rate risks and risks of counterparty default, while target funds with a focus on equities are more exposed to market fluctuations. However, a broad diversification of the Fund can contribute to reducing cluster risks. The ongoing monitoring of the individual target funds also aims to systematically limit the aforementioned individual risks.

#### Risks associated with derivatives trading

The company may conduct transactions with derivatives for the account of the Fund both for hedging purposes and for investment purposes. The hedging transactions serve to reduce the overall risk of the investment fund, but may also reduce the chances of returns.

Buying and selling options or entering into futures contracts or swaps is associated with the following risks:

- Changes in the price of the underlying instrument can reduce the value of an option right or futures contract to the point where it is worthless. The Fund can also suffer losses from changes in the value of the assets underlying a swap.
- Closing out a position with an offsetting transaction, when necessary, generates costs.
- The value of the Fund can be more strongly influenced by the leverage effect
  of options than would be the case if the underlying instruments were acquired
  directly.
- The purchase of options entails the risk that the option is not exercised because the prices of the underlying assets do not change as expected, so that the option premium paid the by Fund is lost. When options are sold, there is a risk that the Fund may be obliged to accept/deliver assets at a price that differs from the current market price.
- With futures contracts too, there is a risk that the Fund will suffer losses as a result of unexpected changes in the market price on expiration.

#### Currency risks

If assets of a fund are invested in currencies other than the fund currency, the fund receives income, repayments and proceeds from such investments in that currency. If the value of that currency falls as compared to the fund currency, the value of the fund is reduced.

#### Fund net income

The main sources of the negative disposal result during the reporting period were realized losses from foreign equities.

### Performance during the reporting period

The company ensures that investor interests are not adversely affected by transaction costs by setting a threshold value for the transactions costs (based on the average fund value) and for a portfolio turnover rate, taking the fund's investment objectives into account. The company monitors compliance with the threshold values and takes further measures if they are exceeded.

<sup>3)</sup> For technical reasons, securities held to maturity may also be reported under unlisted securities.

### Notes pursuant to Section 7 No. 9 of the German Capital Investment Accounting and Valuation Ordinance ("KARBV")

### Information according to the German Derivatives Ordinance (DerivateV)

EUR 66.044.421.65 Underlying exposure obtained through derivatives

#### Contractual parties in derivative transactions

UBS Europe SE (broker) DE

Securities holdings as a percentage of fund assets 91.67 Derivatives holdings as a percentage of fund assets 8.11

Since 22 December 2008, the company has used the qualified approach as defined in the German Derivatives Ordinance using reference assets when determining the extent of the market risk for this Fund. The value-at-risk figures were calculated using the historical simulation method with a 99% confidence level and one-day holding period, using an effective historical observation period of one year. Market risk means the risk to which the Fund is exposed due to possibly unfavorable changes in market prices.

#### Potential exposure to market risk in accordance with Section 37(4) DerivateV

Lowest potential market risk	2.38%
Highest potential market risk	3.85%
Average potential market risk	3.19%

Average leverage achieved using derivative transactions during the financial year: 1.00

### Information regarding the valuation of assets

#### Valuation

For currencies, equities, bonds and derivatives that are admitted to trading on a stock exchange or are admitted to or included in another organized market, the last available trading price will be taken as a basis in accordance with Section 27 of the KARBV. In accordance with Section 29 KARBV, the current values are used as the basis for investment fund units, and the par value or redemption amount is used as the basis for bank balances and liabilities.

Assets that are not admitted to trading on a stock exchange or another organized market, or included in the regulated market or OTC trading on a stock exchange, or for which there is no tradeable price available, are valued pursuant to Section 28 KARBV in conjunction with Section 168(3) of the German Capital Investment Code (KAGB), at a market value that is reasonable upon careful estimation in accordance with suitable valuation models taking the current market conditions into account. Market value is considered to be the amount for which the asset concerned could be exchanged in a transaction between knowledgeable, willing and independent counterparties.

of which other risk takers	in EUR million	2.5

#### Remuneration system of the capital management company

ACATIS Investment Kapitalverwaltungsgesellschaft mbh (ACATIS) manages or attends to securities investment funds. The incentive structure for ACATIS employees is synchronized with the interests of ACATIS' clients. The salaries of our executives and employees consist of fixed remuneration and variable remuneration components, which are agreed annually with the employees. As a motivational component, variable compensation makes an important contribution to the achievement of corporate goals. A distinction is made between two compensation groups: Investment fund managers receive (in equal parts) a portion of the performance-based fee that ACATIS generates from the funds. The payment is made after the end of the financial year and is thus directly related to the success achieved by the clients of ACATIS. The bonus amount may be zero; on the upside, it is limited to three times the annual fixed remuneration. Sales employees receive a portion of the increased portfolio-based income that ACATIS generates from the funds. The assessment basis for the employees is largely identical; if applicable, the specific entitlement will also take into account regional focus areas. The bonus amount may be zero; on the upside, it is limited to three times the annual fixed remuneration. Managing directors are part of this variable remuneration arrangement. The executive salaries correspond to the usual market remuneration and the financial position of the institution. In some cases, a discretionary performance-related bonus may also be paid to employees in other functional areas.

#### Information according to Section 101(2) No. 5 KAGB

#### Material medium to long-term risks

Information about material medium to long-term risks is provided within the activity report.

#### Composition of the portfolio, portfolio turnover and portfolio turnover costs

Information about the composition of the portfolio is provided in the financial statement.

Information about the portfolio turnover is provided in the financial statement and in the schedule of transactions concluded during the reporting period.

The transaction costs are disclosed in the Notes.

#### Consideration of the company's medium to long-term development in the investment decision

The selection of individual securities depends on the investment strategy. The contractual basis for the investment decision can be found in the agreed Terms and Conditions of Investment and, if applicable, the investment guidelines.

The medium to long-term development of the portfolio companies is taken into account if this is stipulated in the contractual terms.

#### Use of proxy advisers

Since 1 January 2020, the company has been supported by external service providers in the exercise of voting rights relating to shares belonging to the Fund. The company has engaged ISS Institutional Shareholder Services Europe S.A., Brussels (Belgium) for this purpose. Taking into account the company's voting right guidelines, ISS makes recommendations to the company with respect to voting behavior, based on analyses of Annual General Meeting documents. It assumes responsibility for transmitting the exercise of voting rights and is obliged to report on voting behavior. This does not affect the supervisory obligations of the company and its civil liability to the investors in the Fund. The engagement of the services company does not create any relationships in law between the services company and investors in the Fund.

## Management of securities lending and the handling of conflicts of interest within the framework of participation in the companies, in particular through the exercise of shareholder rights

No securities lending transactions were conducted during the reporting period.

No known conflicts of interest arose in the context of the participation in the companies, in particular through the exercise of shareholder rights.

## Information pursuant to Regulation (EU) 2015/2365 on transparency of securities financing transactions and of reuse and amending Regulation (EU) No 648/2012 - Disclosure pursuant to Section A

During the reporting period, there were no securities financing transactions and total return swaps pursuant to the aforementioned legal provision.

#### Disclosures regarding non-financial performance indicators

Conventional product — Article 6 of Regulation (EU) 2019/2088 (Disclosure Regulation)

The Principal Adverse Impacts (PAI) on sustainability factors are taken into account in the investment process at the company level. It is not mandatory to take PAIs into account at the Fund level and for this reason no account is taken in this way.

This Fund is not classified as a product promoting environmental or social characteristics within the meaning of the Disclosure Regulation (Article 8), nor as a product promoting sustainable investment (Article 9). The investments underlying this financial product do not consider EU criteria for ecologically sustainable economic activities.

### INDEPENDENT AUDITOR'S REPORT

To ACATIS Investment Kapitalverwaltungsgesellschaft mbH, Frankfurt am Main

#### **Audit opinion**

We have audited the annual report of the ACATIS Datini Valueflex Fund investment fund, comprising the activity report for the financial year from 1 November 2022 to 31 October 2023, the balance sheet and the financial statement for 31 October 2023, the statement of income and expenditure, the statement of appropriation, the statement of changes in the value of the Fund for the financial year from 1 November 2022 to 31 October 2023, as well as the comparative overview for the last three financial years, the list of transactions concluded during the reporting period, insofar as these are no longer part of the financial statement, and the Notes.

In our opinion, based on the findings of our audit, the accompanying annual report complies in all material respects with the provisions of the German Investment Code (KAGB) and the relevant European regulations, and allows a comprehensive view of the actual circumstances and developments of the Fund to be obtained in accordance with these regulations.

#### Basis for the audit opinion

We conducted our audit of the annual report in accordance with Section 102 KAGB and the German generally accepted standards for the audit of financial statements promulgated by the Institute of Auditors (IDW). Our responsibility under these rules and principles is further described in the "Auditor's responsibility for the audit of the annual report" section of our report. We are independent of ACATIS Investment Kapitalverwaltungsgesellschaft mbH in accordance with German commercial law and the professional regulations and have fulfilled our other German professional obligations in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion on the annual report.

#### Responsibility of the legal representatives for the annual report

The legal representatives of ACATIS Investment Kapitalverwaltungsgesellschaft mbH are responsible for the preparation of the annual report, which complies in all material respects with the provisions of the German KAGB and the relevant European regulations, and for ensuring that the annual report provides a comprehensive view of the actual circumstances and developments of the Fund in accordance with these regulations. In addition, the legal representatives are responsible for the internal controls which they have deemed necessary in accordance with these regulations in order to facilitate the preparation of an annual report that is free of material misrepresentations due to fraud (e.g. accounting manipulations and asset misappropriation) or errors.

When preparing the annual report, the legal representatives are responsible for including in the reporting events, decisions and factors which may have a material influence on the further development of the Fund. This means, among other things, that when preparing the annual report, the legal representatives have to assess the continuation of the Fund by ACATIS Investment Kapitalverwaltungsgesellschaft mbH and have the responsibility to disclose facts in connection with the continuation of the Fund, if relevant.

#### Responsibility of the auditor for the audit of the annual report

Our objective is to obtain reasonable assurance as to whether the annual report as a whole is free from material misstatements due to fraud or error, and to make a report that includes our opinion on the annual report.

Reasonable assurance is a high level of assurance, but not a guarantee that an audit conducted in accordance with Section 102 KAGB and German generally accepted standards for the audit of financial statements promulgated by the Institute of Auditors (IDW) will always reveal a material misstatement. Misstatements may result from fraud or errors and are considered material if it could be reasonably expected that they, individually or collectively, affect the financial decisions made by the recipients on the basis of this annual report.

During the audit, we exercise our best judgment and maintain a critical attitude. In addition

- we identify and evaluate the risks of material misstatements due to fraud or errors in the annual report, plan and perform audit procedures in response to those risks, and obtain audit evidence sufficient and appropriate to provide a basis for our audit opinion. The risk that misrepresentations are not discovered is greater in the case of fraud than in the case of errors, as fraud may include collusive behavior, forgery, intentional incompleteness, misleading statements and the de-activation of internal controls.
- we gain an understanding of the internal control system relevant to the audit of the annual report in order to plan audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of this system at ACATIS Investment Kapitalverwaltungsgesellschaft mbH.
- we assess the appropriateness of the accounting policies used by the statutory representatives of ACATIS Investment Kapitalverwaltungsgesellschaft mbH in preparing
  the annual report, as well as the reasonableness of the estimates and related disclosures presented by the statutory representatives.
- we draw conclusions on the basis of the audit evidence we have obtained as to whether there is any material uncertainty in connection with events or circumstances that could cast significant doubt on the continuation of the Fund by ACATIS Investment Kapitalverwaltungsgesellschaft mbH. If we conclude that there is a material uncertainty, we are required i) to make a note of the related disclosures in the annual report or, if these disclosures are inappropriate, ii) to modify our opinion. We draw our conclusions on the basis of the audit evidence obtained up to the date of our audit opinion. However, future events or circumstances may mean that the Fund will not be continued by ACATIS Investment Kapitalverwaltungsgesellschaft mbH.
- we evaluate the presentation, structure and contents of the annual report as a whole, including the disclosures, and whether the annual report presents the underlying transactions and events in such a way that the annual report provides a comprehensive view of the actual circumstances and developments of the investment fund in accordance with the provisions of the German KAGB and the relevant European regulations.

We discuss with those responsible for monitoring, among other things, the planned scope and timing of the audit and significant findings of the audit, including any material deficiencies in the internal control system that we identify during our audit.
