Distribution type	Capitalisation
Minimum investment	EUR 1,000,000.00
Benchmark	Compounded Benchmark Triodos Euro Bond Impact Fund

SFDR article 9

The fund has sustainable investment objectives aligned with SFDR article 9 criteria. These objectives are:

- make money work for environmental and social change
- contribute to the transition to an economy within planetary boundaries
- contribute to the transition to an economy where all humans can enjoy a prosperous life.

Triodos Euro Bond Impact Fund aims to generate positive impact and stable income from a concentrated portfolio of investment-grade, euro-denominated bonds issued by listed companies, and semi-public institutions and EU member state governments. The fund mainly invests in impact and other corporate bonds whose proceeds must finance projects that contribute to at least one of the following transitions: resource transition, energy transition, food transition, societal transition or wellbeing transition. Bond investments must be investment grade and denominated in EUR.

Highlights

- Triodos Euro Bond Impact Fund generated a return (after costs) of 0.94%, while the benchmark yielded 1.01%.
- Bond markets were positive in March, with all major central banks signaling to start policy rate cuts in June. ECB president Lagarde confirmed market views by stating that eurozone inflation is expected to fall further and reach the central bank's 2% target by next year. Considering the sluggish eurozone economy, we expect the ECB to follow a somewhat faster pace of further rate cuts than fellow central banks. Corporate bonds outperformed sovereign bonds on stable risk spreads, with Financials outperforming the broader investment grade market. Spreads on periphery sovereign bonds were also stable.
- The fund had a positive performance, in line with its reference index over the month (gross of costs). The allocation effect was positive, stemming from the underweight position in government bonds and overweight position in government-related bonds. The curve change effect was also positive. The selection effect was negative, resulting from our defensive positioning with an overweight in higher-quality names.

Net Return in %

As per end of March 2024

	1M	3M	YTD	1 Y	3Y avg	5Y avg
Fund	0.94	-0.45	-0.45	4.27	-4.61	-2.29

Portfolio data

As per end of March 2024

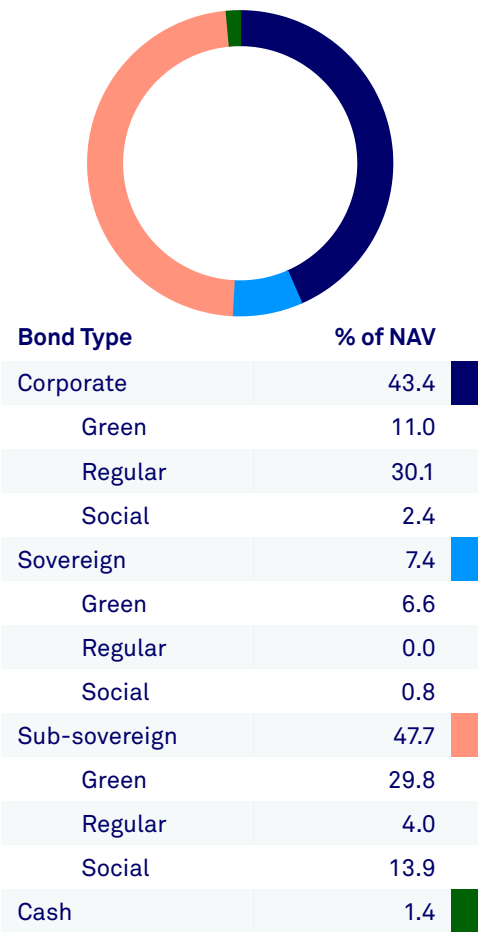

Modified Duration	4.76
Yield	3.16
Convexity	0.36
Average rating	A+/A
SII capital charge	5.20
SWAP spread	29.03
Duration Times Spread	2.37
Total number bonds	152

Source: Triodos Investment Management

All our investments contribute to one or more of the UN SDGs. For regular bonds this contribution is based on the % of revenues from products and services with positive impact. For impact bonds the contribution is based on the % of the proceeds used to fund assets and/or projects. The maximum score is 1. The contribution data for the benchmark is not yet available. We strive to publish this data later this year, with positive impact.

Contribution Transition Theme

All our investments contribute to one or more of the five transitions. For corporate bonds this contribution is based on the % of revenues from products and services with positive impact. For impact bonds the contribution is based on the % of the proceeds used to fund assets and/or projects with positive impact. Sovereign bonds are out of scope, as these are not impact investments. The overall positive contribution of the fund is 78.2 %.

Principal Adverse Impact Indicators (PAIs)

GHG intensity of investee companies: The GHG intensity is a relative measure of greenhouse gas (GHG) emissions. It is the amount of GHG produced per unit of revenue generated by the company, measured in tonnes of CO2 per EURm generated in revenue. The carbon intensity is then weighted using the portfolio weight to get a weighted average for the portfolio.

Non-recycled waste ratio: For each company the non-recycled waste ratio is the total amount in metric tons of non-recycled waste produced dividend by the amount invested in EURm. This is expressed as a weighted average.

Excessive CEO pay ratio: This metric measures the ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees.

Risks

The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level. The product may be exposed to risks, such as concentration risk and interest rate risk. This product does not include any protection from future market performance so you could lose some or all of your investment.
