Risks

The funds invest in money market instruments and may therefore be subject to volatility. For funds following the mark-to-market approach the value of a unit may fall below the purchase price. Changes in interest rates have an effect on the value of the portfolio. The funds might use derivatives which can reduce investor risks or give rise to market risks as well as potential loss due to failure of counterparty. High-grade investment instruments are usually subject to a low credit risk (i.e. potential loss due to failure of issuer). Every fund reveals specific risks. These aspects require corresponding risk tolerance and capacity.
