Risk and reward profile

Risk profile

The Fund's risk and reward profile shows the variations in value an investment in this Fund has undergone over the past five years. The Fund's risk rating may change in the future. Please note, higher possible gains generally also mean higher possible losses. The lowest risk category does not mean that the fund is risk free.

Why is the Fund in the specific category?

Amongst other, equity prices mainly reflect the expected prospects of firms, as estimated by market participants. This estimation tends to fluctuate more strongly in times of higher uncertainty. The Fund's application of Swing Pricing also impacts its risk and reward profile.

Are there any other particular risks?

The Fund's risk and reward profile does not reflect the risk inherent in future circumstances that differ from what the Fund has experienced in the recent past. This includes the following events which are rare but can have a large impact.

- **Liquidity risk:** It can have adverse effects in a situation when the Fund needs to sell assets for which there is not enough demand or only at much lower prices.
- **Operational risk:** Deficient processes, technical failures or catastrophic events may cause losses.
- **Political and Legal risks:** Investments are exposed to changes of rules and standards applied by a specific country. This includes restrictions on currency convertibility, the imposing of taxes or controls on transactions, the limitations of property rights or other legal risks.
