Investment risks

The fund does not offer any capital guarantee or protection and you may not get back the amount invested.

**The fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:**

**Sustainability:** The fund's integration of sustainability risks in the investment decision process may have the effect of excluding profitable investments from the investment universe of the fund and may also cause the fund to sell investments that will continue to perform well. A sustainability risk could materialise due to an environmental, social or governance event or condition which may impact the fund's investments and negatively affect the returns of the fund.

**Bonds:** There is a risk that issuers of bonds held by the fund may not be able to repay the investment or pay the interest due on it, leading to losses for the fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation.

**Liquidity:** In certain circumstances it may be difficult to sell the fund's investments because there may not be enough demand for them in the markets, in which case the fund may not be able to minimise a loss on such investments.

**Geographical focus:** This fund invests primarily in the United States, which means that it is more sensitive to local economic, market, political or regulatory events in the United States, and will be more affected by these events than other funds that invest in a broader range of regions.

**Asset-backed securities:** The timing and size of the cash-flow from asset-backed securities is not fully assured and could result in loss for the fund. These types of investments may also be difficult for the fund to sell quickly.

**Interest rates:** Changes in interest rates may negatively affect the value of the fund. Typically as interest rates rise, bond values fall.

**Derivatives:** The use of derivatives can result in greater fluctuations of the fund's value and may cause the fund to lose as much as or more than the amount invested.

**Fund counterparties:** The fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

**Convertible Securities:** The value of convertible securities tends to decline as interest rates increase and increase as interest rates decline as well as be more volatile than non-convertible debt securities due to its relationship with the underlying equity. They are also generally not as senior as non-convertible debt securities and typically have lower ratings. Contingent convertible securities have additional risks to this due to more difficult valuation and discretionary coupon payments. There are no assurances of capital repayment.

**Fund operations:** The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.

Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

A temporary negative cash position may be due to (1) unsettled trade activity (2) permitted purposes, such as borrowing or derivatives use, if allowed by the prospectus.

Definitions

**Life:** The average number of years for which each component of unpaid principal on a bond, loan or mortgage remains outstanding. The weighted average life calculation provides an aggregate figure that shows how many years it will take to pay off half the outstanding principal on a bond portfolio.

**Effective duration:** Average Duration equals the weighted average maturity of all the cash flows in the portfolio and gives an indication of the sensitivity of a portfolio's bond prices to a change in interest rates. The higher the duration, the more sensitive the portfolio is to interest rate changes. Effective Duration is a calculation for bonds with embedded options (Not every portfolio will purchase bonds with embedded options). It takes into account the expected change in cash flows caused by the option, as interest rates change. If a portfolio does not hold bonds with embedded options, then the Effective Duration will be equal to the Average Duration.

**Credit quality breakdown:** Nationally Recognised Statistical Rating Organisations (NRSROs) assess the likelihood of bond issuers defaulting on a bond's coupon and principal payments. The weighted average credit quality by Western Asset Management assigns each security the higher rating from three NRSROs (Standard & Poor's, Moody's Investor Services and Fitch Ratings, Ltd.). If only one NRSRO assigns a rating, that rating will be used. Securities that are not rated by all three NRSROs are reflected as such. The lower the overall credit rating, the riskier the portfolio. The credit rating is expressed as a regular letter rating (from high to low quality): AAA, AA, A, BBB, BB, ...D.

**Morningstar Analyst Rating™:** Morningstar Analyst Rating™ Source: Morningstar. All Rights Reserved. The Morningstar Analyst Rating™ is subjective in nature and reflects Morningstar's current expectations of future events/behaviour as they relate to a particular fund. Because such events/ behaviour may turn out to be different than expected, Morningstar does not guarantee that a fund will perform in line with its Morningstar Analyst Rating™.

Important information

**This fund has been classified as Article 8 under the Regulation on sustainability related disclosures in the financial services sector (EU) 2019/2088.
