### CHANGE IN NET ASSET VALUE SINCE LAUNCH

### FUND MANAGER COMMENTS

The data published in March once again confirms the robustness of the environment. However, the global disinflation that is fuelling the market's optimism is going through a period of uncertainty with the recent rise in price indices. This is due to a number of factors: deflation in goods prices is gradually coming to an end (manufacturing activity is rebounding, supply chains are no longer disrupted, shipping and energy prices are rising). In addition, service prices, which are linked to wage trends, remain persistent, and the resilience of the US property market is increasing housing costs. The coming months should reveal whether this is just statistical noise or a more structural trend. Disinflationary impulses are also ongoing: the interest rate environment remains restrictive. Supply-side developments are acting as a bulwark against rising prices. Immigration and labour productivity are keeping unit labour costs down. Excess capacity in China remains a powerful deflationary force. Finally, the rise in oil prices is also having a recessionary effect on demand, which will eventually moderate structural inflation. The central banks seem to remain fairly insensitive to recent data, and are indicating the start of a rate cut in June. Paradoxically, the optimism of central banks could prove them wrong: by being confident about disinflation, they have boosted financial conditions, creating strong support for demand and therefore encouraging price increases.

In this context, equities increase by +4.04% (STOXX Europe 600), HY corporate bonds are up +0.41% (ICE BofA Euro HY) and IG corporate bonds are up +1.16% (iBoxx Euro Non Financials BBB). Over the month, the fund improves by +1.81% (including -50bps swing effect) compared to +1.96% for the Refinitiv Europe Focus hedged.

This month performance was led by Saipem (+49bps) which continued to gain after +31bps in February. This is explained by new project announcement and higher oil prices towards the end of the month. The industrial sector continued its rally with the better manufacturing activity (Safran +37bps, Prysmian +9bps, Evonik +8bps). Separately, BNP Paribas (+27bps) rebounded after its disappointing set of results early February and as it announced additional cost savings of €400m for 2024. Nordex (+16bps) and Neoen (+8bps) also contributed positively to the performance as their annual results reassured on their balance sheet solidity and their project pipelines. The performance was partially offset by the semiconductor sector. SOITEC (contrib -14bps, stock -20%) issued a profit warning at the end of the month flagging a slower recovery than expected in the smartphone market and guided for a 2024/2025 revenue and EBITDA 20% below market expectations. BE Semi (-4bps) raises some concerns on the hybrid bonding outlook after a news broke implying that it was likely not to be used in the next node of HBM (High Bandwidth Memory).

The fund has an equity sensitivity of +31.2% and a distance to the floor of +8.8%.

**Focus ESG:** Is China a villain or a saint when it comes to climate change? As China emits more than a quarter of the world's greenhouse gases each year the villain case seems straightforward. Let's not forget that Western countries outsourced most of their manufacturing (and thus their emissions) to China. Nevertheless, China has installed more renewable power than any other country (+293GW in 2023), established incentive policies to promote green products and expect to reach its peak in emissions by 2030. The world's largest emitter of carbon dioxide is also its top source of green technology. Chinese companies make 90% of the world's solar cells, 60% of its lithium-ion batteries and over half of its electric vehicles. But there is a big problem: 50% of China's energy still comes from coal (down from 70% in 2011) and new coal capacity continued to be added every year (+47GW in 2023, +28GW in 2022).

\* Benchmark indicator as of 23/11/2022: EUR unit classes = Refinitiv Europe Focus Hedged Convertible Bond Index EUR (Bloomberg ticker: UCBIFX21) / CHF unit classes = Refinitiv Europe Focus Hedged Convertible Bond Index CHF (Bloomberg ticker: UCBIFX34) / USD unit classes = Refinitiv Europe Focus Hedged Convertible Bond Index USD (Bloomberg ticker: UCBIFX10). From 01/04/2019 to 22/11/2022: ECI Europe Hedged EUR-H/CHF-H/USD-H according to the corresponding currency of the unit class. Before 31/03/2019 : ECI Europe.
