## Risk and reward profile

Historical data, such as is used in calculating the synthetic indicator, is not a reliable indication of the future risk profile. The risk and reward category shown is not guaranteed to remain unchanged, the categorization may shift over time. The lowest category does not mean a risk-free investment.

Equities in general are more volatile than bonds. Equity funds with a global and/or regional focus on developed markets are well diversified over countries and sectors making them less sensitive to price movements within the equity fund range.

The following data are deemed material for this fund, and are not (adequately) reflected by the indicator:

1. The investment exposure of the product is obtained to a material degree through derivatives. A derivative counterparty of the product may fail to fulfil its obligations. The risk is partially mitigated through the use of collateral.
2. The product will invest in derivative instruments. These instruments may present a leverage effect, which will increase the sensitivity of the product to market fluctuations.

For a complete overview of all risks attached to this fund we refer to section Risk considerations within the prospectus.
