

# BlueBay Global High Yield Bond Fund

## Investment objective

The fund is actively managed and targets better returns than its benchmark, the ICE BofA Global High Yield Constrained Index, fully hedged against USD.

## Investment strategy

- There are no restrictions on the extent to which the fund's portfolio and performance may deviate from the ones of the benchmark.
- At least two-thirds of the fund's investments will be in fixed income bonds which pay a comparatively high income, rated below investment grade by a credit rating agency.
- At least half of the fund's investments will be in fixed income bonds issued by companies/governments based in the United States.
- Up to 20% of the fund's assets may be invested in securities issued by governments, banks and corporates in Latin America and Asia respectively.

## Contributors

- Credit selection in banking, led by Deutsche Bank and Intesa Sanpaolo
- Credit selection among single-B and BB rated credits
- Positive term-structure effects driven by euro curve positioning

## Detractors

- Credit selection in telecommunications, led by Altice International and Altice France
- Credit selection in basic industry, led by the legacy position in Quintis

## Outlook

- The underlying technicals for the market are supportive, with high yield benefiting from solid investor demand. The current macroeconomic backdrop remains favourable.
- Idiosyncratic risk in some areas of the market has generated volatility and the asset class has become increasingly bifurcated.
- Capital-structure sustainability remains the dominant theme.
- We continue to like the beta opportunity from an all-in-yield perspective. The alpha opportunity is skewed to sector/single-name selection.
- While aggregate credit fundamentals are slowly deteriorating, they remain solid relative to history.
- Active managers can add value by identifying the issuers that can muddle through and find solutions for their refinancing requirements.
- We experienced a higher default rate in March but we feel that defaults will remain benign this year.
- In terms of portfolio positioning, we are in line to modestly overweight risk in terms of relative beta-adjusted spread duration.

**Past performance does not predict future returns.** The return of your investment may increase or decrease as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation. Fees and other expenses will have a negative effect on investment returns. Performance shown for 1 year periods onwards are annualised figures.

## Important risk considerations

- At times, the market for high yield bonds may dry up, which could make it difficult to sell these bonds, or the fund may only be able to sell them at a discount.
- There may be cases where an organisation with which we trade assets or derivatives (usually a financial institution such as a bank) may be unable to fulfil its obligations, which could cause losses to the fund.
- Investing in high yield bonds offers you the chance to gain higher returns through growing your capital and generating income. Nevertheless, there is a greater risk that the organisation which issued the bond will fail, which would result in a loss of income to the fund along with its initial investment.
- RBC BlueBay could suffer from a failure of its processes, systems and controls – or from such a failure at an organisation on which we rely in order to deliver our services – which could lead to losses for the fund.

## Notes

- While gross of fees figures would reflect the reinvestment of all dividends and earnings, it would not reflect the deduction of investment management and performance fees. An investor's returns will be reduced by the deduction of applicable fees which will vary with the rate of return on the strategy. For example, if there was an annualised return of 10% over a 5-year period then the compounding effect of a 0.60% management fee and a 0.20% performance fee would reduced the annualised return to 9.32% (figures used are only to demonstrate the effect of charges are not an indicator of future performance). In addition the typical fees and expenses charged to a strategy will offset the strategy's trading profits. A description of the specific fee structure for each BlueBay strategy is contained in the strategy's prospectus.
- Risk statistics are annualised and calculated using weekly data points since inception. Risk statistics will be produced once there are 3 complete months of data available; for meaningful results, a minimum sample of 36 data points is recommended and where history is less than 3 years caution should be taken with the interpretation and representation of this data. Returns for periods less than 1 year have not been annualised in accordance with current industry standard reporting practices.
- Fundamental ESG risk rating is assigned at an issuer level by BlueBay. Categories range from 'very high' ESG risk rating to 'very low' ESG risk rating and is a function of the ESG risk profile of an issuer and how will it manages these risks.
- Investment ESG score is assigned at an issuer level by BlueBay unless otherwise stated (i.e. assigned at the security level). Scores range from '+3' through to '-3' and indicates the extent to which ESG is considered investment materials, as well as the nature and scale of the materiality impact (i.e. positive credit impact, negative credit impact, no credit impact).
