Objective: The investment objective of the Fund is to achieve long-term capital appreciation by investing primarily in equity securities which are components of the MSCI World Index, or companies listed in the countries referenced in this index.

Investment Approach: The investment manager seeks to achieve its objective by investing in a diverse range of companies with attractive combinations of long-term fundamental characteristics. The manager systematically assesses each company's value, growth and quality characteristics in the context of market sentiment. The results are tested through disciplined subjective analysis, which also considers unquantifiable factors such as leadership quality and assesses how a company manages environmental, social and governance (ESG) factors. By integrating insights from our stewardship team, EOS at Federated Hermes, and engaging with portfolio companies as required, the manager encourages better ESG practices that support long-term returns.

Environmental performance

(Base currency: US Dollar)

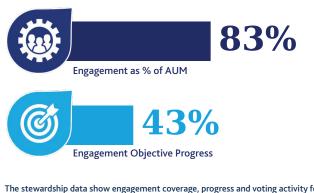

To measure the Fund's environmental performance the key performance indicator used is carbon footprint. This measures carbon emissions generated by companies within the Fund for every million units of currency invested. The calculation accounts for both direct and indirect greenhouse gas emissions, which are covered in industry-standard definitions for Scope 1, 2 and 3 emissions¹. Where a benchmark is referenced on Page 1, the Fund's environmental performance is also compared to that of the benchmark. Therefore, a smaller carbon footprint figure than the benchmark's is evidence that the Fund's emissions, adjusted for the market value held in the Fund, are lower than those of the benchmark. However, please note this fund does not have a specific environmental performance target unless stated in the Fund Objective. The carbon footprint figures shown in the table are accurate as of the end of the previous month. The chart shows the Fund's carbon footprint relative to the benchmark's over time. All environmental performance data has been calculated using available data from the below sources.

Sources: Trucost. 1Scope 1 relates to emissions from sources owned or controlled by the company. Scope 2 addresses indirect emissions associated with the generation of imported or purchased electricity, heat and/or steam. Scope 3 captures other indirect emissions that are a consequence of the company's activities but are generated by sources owned or controlled by another entity, such as employee business travel.

Stewardship

Engagement coverage and progress

The stewardship data show engagement coverage, progress and voting activity for the past 12 months as at the end of the previous month.

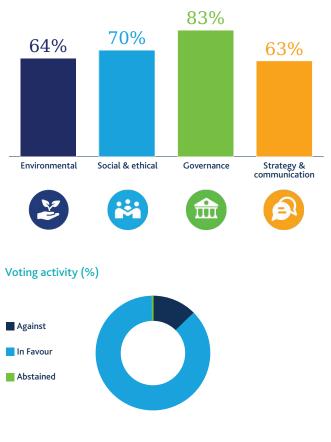

Engagement coverage: shows the proportion of Fund AUM engaged by our stewardship team, EOS at Federated Hermes (EOS). A higher value confirms that more assets are currently being engaged on material ESG and strategic considerations to develop more sustainable business practices and effect positive change. Engagement progress: expresses the success of engagements with Fund assets. The percentage value confirms the proportion of engagements that have progressed one milestone under EOS's proprietary tracking system. AUM engaged by theme: conveys the ESG and strategic topics that assets have been engaged on over the past 12 months. Voting activity: estimates voting activity at shareholder meetings based on Fund

Voting activity: estimates voting activity at shareholder meetings based on Fund holdings at the end of the period. Votes are categorised as where the Fund either voted

against management's recommendations on at least one resolution, entirely in favour of management's proposals, or abstained. EOS provides recommendations to the Fund on voting
