The RAM (Lux) SYSTEMATIC FUNDS - LONG/SHORT EUROPEAN EQUITIES objective is to achieve mid to long-term capital appreciation through investments in European equities using bottom-up fundamentally driven stock picking strategies applied systematically. Our proprietary model seeks to maximize risk-adjusted returns by trading securities of pan-European companies on the long and short side as well as European index futures. The optimized portfolio is the result of multi-factor strategies picking investment opportunities through a blend of value, defensive and momentum approaches.

### PORTFOLIO COMMENT

The fund was very resilient amidst the turmoil in European Equities caused by the war in Ukraine, as the fund progressed as the MSCI Europe TRN was down more than 3% in February. The strong performance of our Materials picks, to which our strategies added net exposure in recent weeks, helped the fund the most during the Equity market downside. The short book had a positive alpha contribution again, as highly-valued short picks in Internet Retail and Biotech sectors continued their down-trend. The trends in the portfolio are towards an increase of net Materials and Energy exposures, supported by strong commodity trends, as well as a net increase of Software and Pharmaceutical stocks, reinforcing the defensive bias of the portfolio in what could be adapted to a "stagflation" environment.
