Investment Objective and Policy

To provide capital growth primarily through investment in equity and equity related securities of Brazilian, Russian, Indian and Chinese companies.

Risk Considerations

The capital is not guaranteed. In order to access restricted markets, the fund may invest in structured products. Should the counterparty default, the value of these structured products may be nil. Investments denominated in a currency other than that of the share-class may not be hedged. The market movements between those currencies will impact the share-class. Where the fund (or the manager) holds a significant percentage of the shares of one or more companies, it may be difficult to sell those shares quickly. It may affect the value of the fund and, in extreme market conditions, its ability to meet redemption requests upon demand. The fund will not hedge its market risk in a down cycle. The value of the fund will move similarly to the markets. Emerging markets will generally be subject to greater political, legal, counterparty and operational risk. Emerging equity markets may be more volatile than equity markets of well established economies. Investments into foreign currencies entail exchange risks. Changes in China's political, legal, economic or tax policies could cause losses or higher costs for the fund.

Benchmark	-12,8	8,5	-6,3	12,1	-22,6

Performance over 5 years (%)

Past performance is no indication of future fund performance. This depends on the trends in markets, investment returns and exchange rates (if relevant), and how successful the asset manager is in implementing the investment policy. The performance shown does not take account of any commissions and costs charged when subscribing and redeeming units. Prices of shares and the income from them may fall as well as rise and investors may not get back the amount originally invested.

All fund performance data are on a NAV to NAV basis, net income reinvested. Data is not available for the time periods with no % growth stated. In case a share class is created after the fund's launch date, a simulated past performance is used, based upon the performance of an existing share class within the fund, taking into account the difference in the ongoing charges and the portfolio transaction costs, and including the impact of any performance fees if applicable.

Some performance differences between the fund and the benchmark may arise because the fund performance is calculated at a different valuation point from the benchmark.
