

NOMURA ALPHA JAPAN LONG SHORT FUND

Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

CLASS A USD ACC (the "Class") IN THE NOMURA ALPHA JAPAN LONG SHORT FUND (the "Fund"), A SUB-FUND OF NOMURA INVESTMENT SOLUTIONS PLC (the "Company") (ISIN: IE00B78RS851)

Manager: NOMURA ALTERNATIVE INVESTMENT MANAGEMENT FRANCE S.A.S

INVESTMENT OBJECTIVES AND POLICY

The Fund aims to provide a return linked to the performance of a portfolio of investments in Japanese shares and share indices (the "Portfolio").

The Portfolio seeks to generate returns through taking long and short positions on Japanese shares and share indices. A party agreeing to buy an asset is said to take a "long" position in an asset and a party agreeing to sell the asset is said to take a "short" position. The Portfolio aims to exploit mispricings of Japanese shares, on the basis that the value of a company's shares is based the current value of its future earnings.

Alpha Japan Asset Advisors Ltd. has been appointed as sub-investment manager of the Fund and is responsible for managing the Portfolio.

The Portfolio uses leverage, an investment technique which gives an investor a larger exposure to an asset than the amount that it invested, which can materially magnify both gains and losses and may have a significant impact on your investment.

In the event that the Fund gets its exposure to the Portfolio through a swap, the Fund will exchange payments of cash with a counterparty, which is expected to be part of the Nomura group, for a return based on the Portfolio. The Fund also has the ability to gain direct exposure to the Japanese shares and share indices which comprise the Portfolio.

Any income arising from the Fund is reinvested and shares in the Fund may be bought and sold daily.

- The Fund applies a risk management mechanism so that if certain risk indicators are breached, the Fund will reduce its exposure to the Portfolio, which may result in a decrease in the Fund's performance.
- Investment in the Fund may be suitable for investors seeking capital growth over a mid-to-long term horizon, typically a minimum of two years. Investors should be prepared to accept periods of market volatility and the risk that their investment may decrease in value in pursuit of long term goals.
- Portfolio transaction costs may have a material impact on the Fund's performance.

The Fund is actively managed, meaning that the Investment Manager actively selects and invests the securities in which the Sub-Fund invests with the aim of meeting the investment objective of the Fund, and is not managed with reference to any benchmark.

RISK AND REWARD PROFILE

This synthetic risk and reward indicator (SRRI) is based on the volatility of the returns of the Fund's investment strategy over the last five years. The Fund's current category indicates that it has a medium level of risk, as the assets to which it is exposed have experienced a medium level of volatility during that period. You should understand that this measure of risk has limitations:

- The lowest category in this table does not mean free of risk;
- The Fund's risk category is not guaranteed and may change over time; and
- The historical and synthetic data used in producing the SRRI may not be indicative of the Fund's future risk profile.

The following risks which may not be captured adequately by the SRRI should also be taken into account when considering an investment in the Fund:

Conflicts of Interest: The Manager may, on behalf of the Fund, enter into derivative transactions with affiliates of the Manager which may act as counterparty or be otherwise involved in any aspects of such transactions.

Counterparty: The Fund will have an exposure to any counterparty with which it enters into a swap, which will be reduced but not eliminated through the use of collateral.

Japan: The Portfolio is only exposed to Japan and sudden market movements in Japan will affect the Portfolio to a greater degree than if it was geographically diversified.

Derivatives and Leverage Risk: Leverage arises from entering into derivatives whose terms have the effect of magnifying an outcome meaning the profits and losses from investment can be

greater than if the investment is made directly into the underlying securities.

Liquidity risk: The fund may invest in securities and/or market segments which may prove to be less liquid, particularly under certain market conditions, and it may therefore be the case that the securities cannot be sold quickly and at reasonable prices.

Equity risk: The fund is exposed to equity and equity indices. These are sensitive to variations in the stock markets which can be volatile and change substantially in short periods of time.

CHARGES FOR THE FUND

The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

Entry charge: 5%

Exit charge: 3%

This is the **maximum** that might be taken out of your money before it is invested and before the proceeds of your investment are paid out, respectively.

Charges taken from the Class over a year

Ongoing charges: 2.41%

Charges taken from the Class under certain specific conditions

Performance fee: 20% of any increase in the price of the shares over the previous highest share price.

Short Selling Risk: The Fund may create synthetic short positions through the use of derivatives. Short positions behave differently from long positions, and the Fund can for example come under pressure to close out short positions at short notice, and before an offsetting long position can mature. This can create unexpected losses from positions that might otherwise have been seen as low risk or well hedged.

The **entry** and **exit charges** shown are maximum figures. In some cases you might pay less – you can find this out from your financial adviser.

The **ongoing charges** figure is based on expenses for the year ending 31 December 2023. This figure may vary from year to year. It excludes:

- Performance fees;
- Portfolio transaction costs, except in the case of an entry/exit charge paid by the Fund when buying or selling units in another collective investment undertaking.

For more information about charges, please see the “Fees and Expenses” section of the prospectus at www.nomuranow.com/naim/

PAST PERFORMANCE

Past performance is not indicative of future results.

The performance figures shown include actual investment management fees, administrative costs, transaction and replication costs.

Please note that past performance was achieved under circumstances which no longer apply.

The Class was launched on 8 June 2012.

The performance has been calculated in US Dollars.
