Risk and Reward Profile

The risk category for this Fund was calculated using synthetic and historical data and is based on how volatile the Fund's Shares are likely to be. The risk category may not be a reliable indicator of the Fund's future risk profile. The risk category shown is not guaranteed to remain unchanged and may change over time.

The risk and reward profile is classified by the level of synthetic and historical fluctuation (i.e. volatility) of the Net Asset Values of the Share class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level. A category 1 fund is not a risk-free investment - the risk of losing your money is small, but the chance of making gains is also limited.

In addition to the risks captured by the indicator, the following risks may also be materially relevant to the Fund:

Currency risk: This Fund may invest in assets which are priced in non-Euro currencies. Therefore, the value of your investment may fall if the Euro rises in value against those currencies.

Credit risk: The risk of loss arising from default that may occur if an issuer fails to make principal or interest payments when due on

a debt security.

Derivatives risk: The risk of loss in a financial derivative instrument where a small change in the value of the underlying investment may have a larger impact on the value of such instrument.

For more information about risks, please see section 15 of the Company's Prospectus, which is available at <https://fondsfinder.universal-investment.com>.

The Fund does not provide any guarantee or protection of capital to investors.
