- gain exposure to currencies, commodities (e.g. gold, agriculture) and property through stock exchange listed investments and/or derivatives;

- invest in derivatives (i.e. financial contracts whose value is linked to the expected price movements of an underlying investment) with the aim of generating returns and reducing the overall costs and/or risks of the Fund; and

### RISK AND REWARD PROFILE

Lower risk

Potentially lower reward

Higher risk

Potentially higher reward

We have calculated the risk and reward category, as shown above, using a method of calculation derived from EU rules. As this Fund has less than five years performance data available, it is based on simulated volatility and is not a guide to the future risk and reward category of the Fund. The category shown is not a target or guarantee and may shift over time. Even the lowest category 1 does not mean a risk-free investment.

This Fund is in category 4 because its simulated historical value has shown moderate volatility. With a Fund of category 4, you have a moderate risk of losing money but your chance for gains is also moderate.

#### THE FOLLOWING RISKS MAY NOT BE FULLY CAPTURED BY THE RISK AND REWARD INDICATOR:

- The performance aim is not a guarantee, may not be achieved and a capital loss may occur. Funds which have a higher performance aim generally take more risk to achieve this and so have a greater potential for the returns to be significantly different than expected.
- This Fund invests in international markets which means it is exposed to changes in currency rates which could affect the value of the Fund.

- The Fund will use derivatives to generate returns as well as to reduce costs and/or the overall risk of the Fund. Using derivatives can involve a higher level of risk. A small movement in the price of an underlying investment may result in a disproportionately large movement in the price of the derivative investment.
- Investments in bonds are affected by interest rates and inflation trends which may affect the value of the Fund.
- The Fund holds bonds with a low credit rating that have a greater risk of default. These investments may affect the value of the Fund.
- The Fund may invest in emerging markets. These markets have additional risks due to less developed market practices.
- The Fund may invest in investments that are not traded regularly and are therefore subject to greater fluctuations in price.
- The Fund takes its charges from the income of the Fund in the first instance. The impact of Fund charges may be material on the value of any income you receive from your investment. There is potential for capital erosion if insufficient income is generated by the Fund to cover these charges.

A complete description of risk factors is set out in the Prospectus in the section entitled "Risk Factors".
