

Allianz Unconstrained Multi Asset Strategy - IT2 - EUR

Multi-asset fund with long-/short-term strategy

Investment Objective

The fund follows a highly flexible strategy across different asset classes including equities, bonds, commodities and currencies. Exposures to the individual asset classes are made through derivatives. In this way, leverage of the risk exposure is possible. The objective of the investment policy is to achieve appropriate annualised returns.

Fund Manager

Gavin Counsell
(since 03/26/2020)

Paul Pietranico
(since 08/31/2020)

Gary Chen
(since 03/10/2021)

Key Figures

Effective Duration (%)	4.46
Average nominal return (%)	3.13
Yield to worst (%) ¹¹	1.52
Average rating	BBB+

Opportunities

- + Prospect of attractive returns over the course of the market cycle
- + Flexible use of different high-opportunity asset classes and instruments, including derivatives
- + Possible additional returns from active management
- + Currency gains in non-hedged share classes possible

Risks

- Positive return not guaranteed. The volatility (fluctuation) of the fund unit value may be greatly increased.
- Above-average fluctuations in value and loss risks, especially in high-opportunity asset classes and with strategies that use derivatives
- No guarantee of success for active management
- Currency losses in non-hedged share classes possible

FOR FUND DISTRIBUTORS AND PROFESSIONAL INVESTORS ONLY

- 1) Calculated at the net asset value, excl. front-end load, distributions reinvested. Calculation according to method as defined by BVI, the German Fund Companies Association. **Any front-end loads reduce the capital employed and the performance.**
- 2) Benchmark history: until 30/09/2021 LIBOR EUR Overnight (in EUR), until 30/09/2015 no Benchmark (EUR)
- 3) SFDR: EU Sustainable Finance Disclosure Regulation. Information accurate at time of publishing.
- 4) The Sharpe ratio states the relationship between the return generated by the fund and the investment risk. The fund's excess return versus the risk-free market rate is compared to volatility. Negative values are not meaningful.
- 5) Volatility measures the fluctuation range of the fund's performance over a specified period of time.
- 6) Measure of the proportion of fund assets that is invested differently from the benchmark.
- 7) This is for guidance only and not indicative of future allocation.
- 8) For derivatives, economic exposure of the instruments is considered.
- 9) The all-in fee includes the expenses previously called management, administration and distribution fees. Any payment of a trail fee by the management company to a distribution partner will be effected from the all-in fee.
- 10) TER generally: Total cost (except transaction costs) charged to the fund during the last financial year. TER for funds-of-funds: The costs incurred by the fund itself (except transaction costs). Since the fund held other investment units ("target funds") in the reporting period, further costs, charges and fees may have been incurred at the level of the target fund.
- 11) Represents the lowest potential yield that an investor could theoretically receive on the bond up to maturity if bought at the current price (excluding the default case of the issuer). The yield to worst is determined by making worst-case scenario assumptions, calculating the returns that would be received if worst-case scenario provisions, including prepayment, call or sinking fund, are used by the issuer (excluding the default case). It is assumed that the bonds are held until maturity and interest income is reinvested on the same conditions. Calculation is before currency hedging. The yield to worst is a portfolio characteristic; in particular, it does not reflect the actual fund income. The expenses charged to the fund are not taken into account. As a result, the yield to worst is not suitable as an indicator of the future performance of a bond fund. Forecasts are not a reliable indicator of future results.

Disclaimer

Investing involves risk. The value of an investment and the income from it may fall as well as rise and investors might not get back the full amount invested. Investing in fixed income instruments may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including positions with respect to short-term fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values of these instruments are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions. Allianz Unconstrained Multi Asset Strategy is a sub-fund of Allianz Global Investors Fund SICAV, an open-ended investment company with variable share capital organised under the laws of Luxembourg. The value of the units/shares which belong to the Unit/Share Classes of the Sub-Fund that are denominated in the base currency may be subject to an increased volatility. The volatility of other Unit/Share Classes may be different and possibly higher. Past performance does not predict future returns. If the currency in which the past performance is displayed differs from the currency of the country in which the investor resides, then the investor should be aware that due to the exchange rate fluctuations the performance shown may be higher or lower if converted into the investor's local currency.
