Risk and Reward Profile

The above rating is based on the historic volatility of the simulated Net Asset Value of this Share Class over the last five years and may not be a reliable indication of the future risk profile of this Share Class.

The risk and reward category shown above is not guaranteed to remain unchanged and may change over time.

A Share Class with the lowest risk rating does not mean a risk-free investment.

Why is this Share Class in this category? This Share Class is classified in category 6 because its simulated Net Asset Value has shown high fluctuations historically.

Other material risks:

- The value of your investment may fall as well as rise and you may get back less than you originally invested.

- The value of equity securities may go down as well as up in response to the performance of individual companies and general market conditions.
- The single market in which the Sub-Fund invests may be subject to particular political and economic risks, and as a result, the Sub-Fund may be more volatile than more broadly diversified funds.
- The Sub-Fund may have greater volatility compared to broader market indices as a result of the Sub-Fund's focus on value securities.
- The Sub-Fund may invest in securities of smaller companies which may be less liquid, more volatile and tend to carry greater financial risk than securities of larger companies.
- Movements in currency exchange rates can adversely affect the return of your investment. The currency hedging that may be used to minimise the effect of currency fluctuations may not always be successful.
- Further information about risks can be found in "Appendix IV - Risk Factors" of the Prospectus.
