Fund Profile

Investment Objective

The Fund's investment objective is to generate both income and long term capital growth by investing in a diversified portfolio of securities, primarily in the global convertible market.

Key Facts

- Team of six sector specialists based in London and Connecticut
- The team has 125+ years of combined industry experience
- Typically 60-100 positions with geographic and sector diversification
- Fundamentally-driven convertible analysis. No benchmark constraints
- Ability to hedge interest rates

Performance for the USD Class I Dist. The class launched on 30 August 2013. Performance data is shown in USD. Source: Northern Trust International Fund Administration Services (Ireland) Ltd. Benchmark performance shown in USD. Source: Bloomberg. If this is not your local currency, exchange rate fluctuations may cause performance to increase or decrease when converted into your local currency. Performance data takes account of fees paid by the fund but does not take account of any commissions or costs you may pay to third parties when subscribing for or redeeming shares or any taxes or securities account charges that you may pay on your investment in the fund. Such charges will reduce the performance of your investment. A 5% subscription fee can be charged at the Investment Managers discretion.

1. Historic yield is based on a NAV per share of US\$9.18 and income of US\$0.5288 per unit paid in the last 12 months, based on USD Institutional distribution units. WARNING: Investors should note that historic yield does not measure the overall performance of a fund. It is possible for a fund to lose money overall but to have a positive historic yield. Historic yield cannot be considered as being similar to the interest rate an investor would earn on a savings account.

Fund Managers' Comments

The Fund returned 1.31% in July, taking its return since inception to 39.20% (USD I Acc Share Class). In comparison, the Refinitiv Global Focus Convertible Bond Index returned 3.02% and 31.20%, respectively (in dollar terms).

Market review

July was an extremely strong month for risk assets. Inflation prints on both sides of the Atlantic came in softer during the month, fuelling hopes that the cycle of western central bank rate increases may be nearing their conclusion. With GDP growth in the US positively surprising for Q2, this led to predictions of a soft landing becoming the norm with even longstanding bears such as Mike Wilson at Morgan Stanley throwing in the towel and predicting an ongoing positive environment for stocks.

Consequently, equity markets rose in close lockstep during the month. The MSCI World Index rose 3.3% with the NASDAQ (3.8%), S&P (3.1%), EuroStoxx 600 (2.0%), and TOPIX (1.5%) all posting similar results. Even the Russell 3000 Value and Growth indices showed little deviation from this trend (3.6% and 3.4%, respectively). The most noteworthy aspect of this rally was the significant outperformance of heavily shorted equities – the Goldman Sachs Most Short Basket Rolling stocks rose 17.0% in the month as investors abandoned their bearish bets en masse. Indeed, Goldman Sachs noted July was in the 95th percentile of short covering months as the American Association of Individual Investors (AAII) reported only 24.1% of respondents identified as bearish, down from 27.5% in June and the lowest figure in over two years.

This enthusiasm extended to all asset classes. Credit risk was materially tighter on both sides of the Atlantic with the CDX North American High Yield Index and ITraxx European Crossover Index tightening 21bps and 20bps respectively. Similarly, industrial (copper 5.7%; oil 15.8%; nickel 8.6%), hard (gold 2.4%; silver 8.7%) and soft commodities rallied (S&P GSCI Agricultural Index 2.5%), while interest rates were generally unchanged on the month.

While we note the significant progress made on curbing inflation, we believe the market's ebullient mood may be somewhat overdone. In particular, we note economic data during the month, backward-looking GDP and inflation reports aside, was decidedly mixed in the US and downright depressing in the EU. In the US, leading economic indicators continued to decline, ISM reports missed expectations (with manufacturing labour demand contracting) and inventories continued to rise to historically high levels. On the latter, we note FactSet calculated that S&P 1500 inventory days on hand rose to 80 days during the month. This is a record by a huge margin as, prior to Covid, this figure had never exceeded 68 days and represents a headwind to future growth and a recessionary risk if consumer demand proves incapable of clearing this.

Finally, we also note the downbeat commentary from all the major recruitment firms who reported during the month, each of whom noted a slowdown in hiring demand. In particular, we found the following two quotations from earnings calls during the month particularly eye-opening:

- "As an industry and as a business, we are already operating in an environment that is indicative of what we would call a ... recessionary level." Jonas Prising, Manpower CEO
- "Clients are more cautious, more conservative, more tentative than we had counted on. They got modestly more so throughout the

quarter.... That [change] was broad.... It impacted everything." Keith Waddell, Robert Half CEO

While these reports are anecdotal, as they come from firms at the sharp end of the hiring industry, they are worth considering. As they stand in stark contrast to the overall Goldilocks mood and to the backward-looking economic data, they do provide reason for caution when considering the potential near-term economic performance and medium-term direction of risk assets.

Fund activity

Fund performance, in base currency, was positive in June, driven by the materials, IT and industrial sectors.

With respect to portfolio construction, we retain an overweight to Japanese convertibles as we keep a constructive view of the Tokyo Stock Exchange's (TSE) moves to improve return on capital. Moreover, the Bank of Japan's muted movements to 'normalise' their yield curve control measures in July suggest an ongoing supportive environment for equities. We hold this overweight Japanese exposure at the expense of an underweight exposure to Europe.

The largest individual contributors to Fund performance came from **Ivanhoe Mines, Rivian Automotive**, and **Nordex**.

Ivanhoe Mines is a copper-focused miner with operations in both the Democratic Republic of Congo and South Africa. The Fund benefitted as the equity rose 15.6% during the month as copper futures rose 7%.

Rivian is a US-based electric vehicle manufacturer. The Fund benefitted from the 65.9% rise in the shares during the month which occurred in the absence of defined catalysts. We believe short covering and technicals may have played a significant role in this move.

Nordex is a European-based onshore wind turbine manufacturer. The Fund made profits as the underlying equity rose 15.6% on the month, driven by positive commentary in the market suggesting the wind power market may be entering a period of greater stability and price discipline, which should boost profitability for Nordex.

Conversely, the largest detractors to performance in July came from **Lumentum**, **Array Technologies**, and **Jet2**.

Lumentum is a US-based supplier of optical communications equipment in the US. This is a highly convex bond trading near par, but the Fund made losses as the stock fell 7.7% in July following sector downgrades by analysts.

Array Technologies is a manufacturer of solar panel trackers for utility-scale solar farms. The stock fell 15.7% during the month on concerns about the solar market in the US following weak results from SunPower, Enphase and SolarEdge. We note that these are all residential-focused companies and thus have little read-through to Array. Indeed, Array's primary competitor, NexTracker, reported very strong results in July which allowed it to rise on the month. We thus maintain a position in Array in advance of their earnings announcement in August.

Jet2 is a UK tour and travel operator. We made losses as the equity fell 9.8% in July despite a solid earnings report, as investors expressed concern over whether the company would be able to continue demonstrating such strong results in the face of a consumer slowdown.

Market outlook

We believe markets are at an interesting juncture. Many investors entered 2023 expecting a near-term recession on the back of the

It should not be assumed that recommendations made in future will be profitable or will equal performance of the securities in this document. A list of all recommendations made within the immediately preceding 12 months is available upon request.

global interest rate cycle. However, since Silicon Valley Bank's default and the subsequent banking scare in the spring, economic data has largely surprised to the upside and there is widespread hope that the US Federal Reserve has successfully cured inflation without engendering a recession – a textbook soft landing. This has resulted in a significant change in investor risk appetite and equity ownership. As the AAII data demonstrates, investors are now at historically high levels of bullishness and many of the most bearish Wall Street analysts have thrown in the towel.

Consequently, equities have rerated significantly and now trade at historically high multiples - 20x current-year EPS with double-digit EPS growth expected for both 2024 and 2025. With current interest rate levels, it leaves the US equity risk premium at multi-decade lows.

As noted above, we see reasons to be concerned that consensus may be too optimistic and valuations somewhat too extended. However, at the same time, most corporate balance sheets remain in good shape and healthy companies retain sufficient access to capital.

We believe this continues to represent an opportune environment for convertible bond investors and remain positive about the prospects for our portfolio.

Therefore, we remain fully invested but have been very careful about ensuring our portfolio retains strong convexity. In particular, our portfolio's average bond price is 100% with equity sensitivity of 52%, a strong positive yield (we typically distribute around 1.5% quarterly) and moderate premium. In conjunction with ongoing strong credit quality, we believe this is the best way to protect the Fund's capital against the potential retracement of equity markets while retaining upside optionality should economic data continue surprising to the upside.

David Keetley and Stephen McCormick

Risks

- Capital is at risk and there is no guarantee the Fund will achieve its objective. Investors should make sure their attitude towards risk is aligned with the risk profile of the Fund before investing.
- Past performance is not a reliable guide to future performance. The value of investments may go down as well as up and you might get back less than you originally invested as there is no guarantee in place.
- The value of a fund's assets may be affected by uncertainties such as international political developments, market sentiment, economic conditions, changes in government policies, restrictions on foreign investment and currency repatriation, currency fluctuations and other developments in the laws and regulations of countries in which investment may be made. Please see the Fund's Prospectus for details of all risks.
- The Fund invests in equities, convertible and fixed income securities and prices can rise or fall due to several factors affecting global stock markets.

N # 1--- 1----

- The Fund uses derivatives which carry the risk of reduced liquidity, substantial loss, and increased volatility in adverse market conditions, such as failure amongst market participants. The use of derivatives will result in the Fund being leveraged (where market exposure and the potential for loss exceeds the amount the Fund has invested) and in these market conditions the effect of leverage will magnify losses. The Fund makes extensive use of derivatives.
- The Fund invests in assets denominated in currencies other than the Fund's base currency. Changes in exchange rates may have a negative impact on the Fund's investments. If the share class currency is different from the currency of the

country in which you reside, exchange rate fluctuations may affect your returns when converted into your local currency. Hedged share classes may have associated costs which may impact the performance of your investment.

- There may be times where the issuer or guarantor of a fixed income (or convertible) security cannot meet its payment obligations or has their credit rating downgraded, resulting in potential losses for the Fund.
- The Fund invests in emerging markets where there is a greater risk of volatility due to political and economic uncertainties, restrictions on foreign investment, currency repatriation and currency fluctuations. Developing markets are typically less liquid which may result in large price movements to the Fund.

Morningstar Medalist Rating The Morningstar Medalist Rating™ is the summary expression of Morningstar's forward-looking analysis of investment strategies as offered via specific vehicles using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The Medalist Ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Investment products are evaluated on three key pillars (People, Parent, and Process) which, when coupled with a fee assessment, forms the basis

for Morningstar's conviction in those products' investment merits and determines the Medalist Rating they're assigned. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirect-ly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using algorithmic techniques. Vehicles are sorted by their expected performance into rating groups defined by their Morningstar Category and their active or passive status. When analysts directly cover a vehicle, they assign the three pillar ratings based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. When the vehicles are covered either indirectly by analysts or by algorithm, the ratings are assigned monthly. For more detailed information about these ratings, including their methodology, please go to global. morningstar.com/managerdisclosures/.

The Morningstar Medalist Ratings are not statements of fact, nor are they credit or risk ratings. The Morningstar Medalist Rating (i) should not be used as the sole basis in evaluating an investment product, (ii) involves unknown risks and uncertainties which may cause expectations not to occur or to differ significantly from what was expected, (iii) are not guaranteed to be based on complete or accurate assumptions or models when determined algorithmically, (iv) involve the risk that the return target will not be met due to such things as unforeseen changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, tax rates, exchange rate changes, and/or changes in political and social conditions, and (v) should not be considered an offer or solicitation to buy or sell the investment product. A change in the fundamental factors underlying the Morningstar Medalist Rating can mean that the rating is subsequently no longer accurate.
