

Fund objectives and investment policy

The fund aims to provide capital growth and income.

The fund will invest in securities that are related to insurance risks (known as insurance-linked securities), mainly in catastrophe or "cat" bonds. The fund will focus on the insurance risk of natural catastrophes such as hurricanes and earthquakes affecting regions such as Western Europe, Japan and the USA where people generally buy insurance. The fund will diversify its investments by peril (e.g. wind, earthquake), geography and season (some risks vary with the time of year) but will have a bias toward hurricane and earthquake risks in the USA, which form the greater part of the cat bond market. The fund aims to make investments which do not depend for their value on the economic cycle; they depend instead on the occurrence and severity of natural events. The fund may also make investments in other types of insurance-related risks, for example life insurance risks (like pandemic mortality), health risks or motor risks. The fund will not invest in whole-of-life assurance policies (known as life settlements). The fund may also invest in other financial instruments and hold cash on deposit. Derivatives may be used to achieve the investment objective and to reduce risk or manage the fund more efficiently. The fund will not invest more than 10% into funds. Recommendation: Investors should seek independent advice and satisfy themselves that they have an understanding of the techniques employed by the manager.

This fund may use financial derivative instruments as a part of the investment process. Derivatives carry a high degree of risk and should only be considered by sophisticated investors.
