

Mirabaud - Sustainable Convertibles Global A cap. USD

29 February 2024

Investment Overview

A high-conviction, highly active strategy investing in global convertible bonds targeting 50 best ideas, with the top-20 positions representing around 60% of the portfolio. We only invest in 'pure' convertibles (no synthetic securities) and only use hedging to manage currency risk. Extensive fundamental analysis of balance sheet strength and potential equity upside is combined with full ESG integration. Shadow ratings using Moody's methodology is used for unrated credits. This approach helps us to find hidden value and minimise default risk.

Approach to Sustainability

We favour a materiality-driven approach to sustainable investing, along with an assessment of ESG practices. We encourage disclosure and transparency, and avoid governance malpractices. We follow a three-step process: 1. Exclusion and/or restriction of companies operating in controversial sectors, as well as companies involved in recent major controversies and UNGC Breaches; 2. Positive screening - aiming to minimise downside risk of the portfolio by excluding the companies with the lowest ESG scores. As a result of the combined application of negative, normative and positive screening, the investment universe is reduced by 30%; 3. In-depth analysis of material ESG issues for the weakest companies, along with ongoing engagement.

Risk Information

Investments in debt securities are subject to interest rate, credit and default risk. The fund may invest in emerging markets that may be more volatile and generate higher operational risks than equity markets of well established economies. The fund may invest in lower rated securities that are subject to higher credit risk and are more volatile than higher rated securities. The fund may invest in asset backed instruments that would lose their value if their underlying assets value was to diminish or if their issuer was to default and be unable to meet its contractual obligations. The fund may invest in securities that are less liquid because buyers/sellers are not always in sufficient numbers to trade these securities readily. Financial derivative instruments may be used as part of the investment process, which may increase the fund volatility and expose the fund to the risk of default of its counterparties. Currency forwards will be used to reduce the currency risk generated by investments in share-classes or instruments that are not denominated in the fund base currency. The effectiveness of that hedging process will be subject to counterparty and operational risk. Cash placed in time deposits or money market funds are exposed to their issuer default risk.

IMPORTANT INFORMATION

This marketing material contains or may incorporate by reference information concerning certain collective investment schemes ("funds") which are only available for distribution in the registered countries. It is for your exclusive use only and it is not intended for any person who is a citizen or resident of any jurisdiction where the publication, distribution or use of the information contained herein would be subject to any restrictions. It may not be copied or transferred.

This material is provided for information purposes only and shall not be construed as an offer or a recommendation to subscribe, retain or dispose of fund units or shares, investment products or strategies. Before investing in any fund or pursuing any investment strategy, potential investors should take into account all their characteristics or objectives as well as consult the relevant legal documents. Potential investors are recommended to seek prior professional financial, legal and tax advice. The sources of the information contained within are deemed reliable.
