Risk and reward profile

- This indicator shows how much a fund has risen and fallen in the past, and therefore how much a fund's returns have varied. It is a measure of a fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is risk free.
- The fund has been classed as 6 because its volatility has been measured as above average to high.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this fund.
- The risk and reward profile shown is not guaranteed to remain the same and may shift over time.
- Please note that even funds with the lowest rank may lose you money.
- In addition to the level of risk shown by the indicator, there are other risks associated with this fund, as detailed below:
- The fund invests mainly in shares, and the value of these may fall or rise due to a number of factors, including the performance of the company and general stock market and exchange rate fluctuations. The value of your investment may rise or fall and you could get back less than you invest.
- Sustainability Risk - The fund may be subject to sustainability risk, meaning an environmental, social or governance ("ESG") event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of an investment.
- Attention is also drawn to risks associated with portfolio concentration and investing in the Energy Companies and Emerging Markets.
- For full details of the fund's risks, please see the prospectus which may be obtained from the address in 'Practical Information' below.
