documents for further information on costs.

### Risk Indicator

The Risk Indicator is subject to change and is correct  
based on the data available at the time of publication.

### Investment objective

To provide a high level of current income, consistent with the preservation of capital, by investing primarily in adjustable rate senior loans worldwide (including Asia Pacific) directly and/or indirectly through underlying portfolios with exposure to the Senior Loans markets worldwide. The investment concerns the acquisition of units in an actively managed fund and not in a given underlying assets.

The benchmark index is shown for performance comparisons purposes only. The fund is actively managed and does not track the index.

### Investment strategy

■ The fund's team seeks to invest (directly and indirectly) primarily in senior, secured loans to non-investment grade corporations. The indirect investments are obtained through an active allocation of the fund's assets between the other sub-funds of Invesco Zodiac Fund and/or other Undertakings for Collective Investment initiated by the Invesco Group exposed to senior loans.

■ The fund's team seeks loans to companies which, in the judgment of the analyst team, have excellent management teams, consistent and dependable sources of cash flow and reliable collateral packages providing a second source of repayment.

■ To manage risk, the team seeks to keep the portfolio broadly diversified and generally avoids industries they believe to be fundamentally flawed or speculative.

### Risk warnings

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Senior loans may be illiquid and more difficult to sell quickly at a fair price. Because of the risk of illiquidity of the instruments in which the product will invest, the processing of the redemption requests may be deferred in certain circumstances.

Interest rates on senior loans depend on the level of an underlying rate; as such, they may change and cause fluctuations in the net asset value of the product.

Senior loans are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the scheduled dates.

The product will hold debt instruments which are of lower credit quality and may result in larger fluctuations in the value of the product.

The product may also use derivatives for investment purposes. The use of derivatives may result in the product being significantly leveraged and may result in large fluctuations in the value of the product.

The product may invest in developing markets, this may cause large fluctuations in the net asset value of the product.

**Past performance does not predict future returns.** Please refer to next page for additional performance disclosure.

(YTD) Year To Quarter is the performance from the start of the current year to the end of the latest quarter.

2 The benchmark for performance comparison is a weighted blend of the Credit Suisse Leveraged Loan Index (79%) and the Credit Suisse Western European Leveraged Loan Index (21%). The benchmark does not reflect currency hedging employed by Swiss franc hedged classes. The Credit Suisse Leveraged Loan Index is designed to reflect the investible universe of the US\$-denominated leveraged loan market. The Credit Suisse Western European Leveraged Loan Index is designed to reflect the investible universe of the Western European leveraged loan market.

3 All holdings of issuers domiciled in Canada and structured products domiciled in Cayman Islands are included in USA category. The Canadian exposure is relatively small and more closely correlated with US risk as well.
