\* Source : Amundi. The above cover complete periods of 12 months for each calendar year. Past performance is no predictor of current and future results and does not guarantee future yield. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

**Management commentary**

March started out with a drop in inflation in the Eurozone, driven mainly by Germany and France. Inflation came out at 2.6% in February versus 2.8% the previous month. In Germany, inflation dropped from 2.9% to 2.5% year on year in February, lower than forecast (2.6%). It was the same in France, where inflation dropped to below 3% for the first time since the beginning of 2022, at 2.9% versus 3.1% the previous month.

Although still above the 2% target, the tendency in the Eurozone is for a gradual decline, enabling the ECB to be more optimistic in its projections. The ECB has revised its projections, lowering them from 2.7% to 2.3% for 2024, and estimates that it will achieve its 2% target in 2025.

At its March 7 meeting, the ECB decided to leave its rates unchanged for the fourth time in a row. Christine Lagarde highlighted the progress made in terms of inflation but considers it not yet sufficient to start cutting rates and is waiting for more data before taking a decision. The June figures will therefore be much awaited and will determine any action taken. At the moment, the consensus is leaning toward a first cut in June 2024.

In the United States, inflation accelerated slightly, rising to 3.2% in February versus 3.1% the previous month. However, core inflation - excluding energy and food - declined (from 3.9% to 3.8%), linked mainly to the services sector. These latest figures do not yet allow the Fed to lower its interest rates and Jerome Powell decided to leave them unchanged for a fifth consecutive time as the progress achieved is not sufficiently firmly anchored. Particularly as the US economy remains robust with solid indicators. US GDP growth for the last quarter of 2023 has been revised upward, from 3.2% to 3.4%, which has reassured the US central bank and confirmed that there was no urgent need to cut its interest rates for the moment.

In the Eurozone, GDP remained stable in the fourth quarter of 2023 and employment increased by 0.3%. According to the latest estimates, Eurozone GDP will grow gradually, with growth of 0.6% in 2024, rising to 1.5% in 2025 and 1.6% in 2026.

March was also marked by the publication of the figures for France's budget deficit in 2023, which amounts to €154 billion, or 5.5% of GDP compared with 4.9% in 2022. The French government has launched an emergency plan to reduce the budget deficit to 4.4% of GDP this year and is aiming to bring the deficit down to 2.7% of GDP by 2027. The attention is now focused on the rating agencies, which could downgrade France's AA rating with an impact on the cost of its debt. Particularly as Moody's has described the France's deficit reduction target as "unlikely" and will officially announce the results of its review of France's debt rating at the end of April.

In these conditions, yields fell slightly. US 10-year yield ended March at 4.20%, 5 basis points (bp) lower than at the end of the previous month. The tendency was the same in the Eurozone, with French 10-year yield ending March at 2.81% (down by 7bp) and German 10-year yield ending at 2.30% (down by 11bp). Italian and Spanish yields ended the month at respectively 3.67% (-16bp) and 3.15% (-13bp).

This portfolio is indexed to the J.P. Morgan Government Bond Index Global (GBI Global). We are keeping relative exposure in sensitivity between the portfolio and its index as low as possible by investing in a limited number of securities, thus ensuring minimum risk.
