RISK AND REWARD PROFILE

With lower risk, With higher risk,

potentially lower rewards potentially higher rewards

This indicator represents the annual historical volatility of the Fund over a 5-year period.

Risk category 1 reflects the lowest potential gain and/or loss in the portfolio's value. This is achieved through investments in money market instruments on the US market.

Historical data, such as that used to calculate the synthetic indicator, cannot be considered as a reliable indication of the Fund's future risk profile.

The risk category associated with the Fund is not guaranteed and may change over time.

The lowest risk category does not mean "risk free".

Your initial investment is not guaranteed.

Significant risk(s) for the Fund not taken into account in this indicator include the following:

Credit and interest rate risk linked to investments in bonds: As the Fund invests in bonds, money market instruments and other debt securities, there is a risk that the issuer may default. The likelihood of this happening depends on the creditworthiness of the issuer. An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. Bond prices and yields have an inverse relationship: when the price of a bond falls, the yield rises.

Concentration risk: To the extent that the Fund's investments are concentrated in one particular country, market, industry or asset class, it could suffer losses due to adverse occurrences affecting that country, market, industry or asset class.

Risks associated with holding high-yield bonds: The Fund invests in sub-investment grade bonds. These bonds may produce a higher level of income than investment-grade bonds but at a higher risk to your capital.

Risk linked to the use of derivatives: The Fund may use derivatives, i.e. financial instruments whose value depends on that of an underlying asset. However, even minor fluctuations in the price of the underlying asset may cause significant changes in the price of the corresponding derivative. The use of over-the-counter derivatives exposes the Fund to a risk that the counterparty will fully or partially fail to honour its contractual obligations. This may result in a financial loss for the Fund.

Liquidity risk: This is the risk that an asset cannot be sold at the expected price or within the desired time frame, due to the structural or cyclical narrowness of the market. This risk thus materialises by a decrease in the sale price of the assets concerned and/or a delay in the adjustment or liquidation of the portfolio.
