

Overview

Profile

Kempen (Lux) Global Small-cap Fund aims to achieve for investors long-term capital growth. This fund invests in equity shares of small companies listed on the global stock exchanges. The fund aims to achieve a higher return in the long-term than the MSCI World Small Cap Index. This fund is actively managed and may hold investments that are not included in the benchmark. The investment manager is allowed to deviate significantly from the benchmark. For this aim shares will be selected of smaller listed companies, while at the same time complying with strict exclusion and sustainability criteria. The companies are defined as companies with a maximum market capitalisation at the time of initial purchase of either EUR 8 billion, or the highest market capitalisation of any company included in the MSCI World Small Cap Index. The portfolio construction process involves a disciplined end to end framework initially utilizing proprietary in-house stock filters screening for high quality and attractively valued stocks. Thereafter, fundamental in-house research is carried out to identify high conviction investment ideas. The end result is a portfolio of 60-90 stocks, well-diversified across all regions and sectors.

| 3 years (on annual basis) | 4.3% | 2.2% |
| 5 years (on annual basis) | 8.2% | 7.1% |
| Since inception (on annual basis) | 10.9% | 8.9% |

Performance is shown after deduction of ongoing charges. The value of your investments may fluctuate. Past performance provides no guarantee for the future. As of 30 June 2018 a deviating Net Asset Value (NAV) is used for the calculation of the performance figures. This NAV is calculated based on closing prices of the Fund investments thereby deviating from the NAV which was originally issued and partly calculated based on snapshots (Asia & Pacific investments). The deviating NAV is used to make a better comparison with the benchmark, which is also solely based on closing prices of the investments. However, for the calculation of the performance of 31 December 2021 the originally issued NAV of 3 January 2022 was used as the deviating NAV could not be calculated due to technical circumstances.

Developments Per 2024-04-30

In April, the NAV of the fund (I-class) decreased by 2.5% net of fees, outperforming the MSCI World Small Cap index (benchmark) which decreased by 4.2%. Year-to-date the fund is up 3.0% versus performance of 2.3% for the benchmark and 1.9% for the MSCI World Small Cap Value index. The relative performance in April was helped by decent Q1 2024 results for the portfolio companies that reported, despite a macro environment which remains challenging. Furthermore, the portfolio did not suffer from higher interest rates as the financial leverage of our holdings is relatively low versus the benchmark. Our exposure to financials in Europe also contributed to our relative outperformance in April.

The three top contributing stocks during the month of April were Strategic Education (+11%), First Solar (+6%) and Erste (+6%). Strategic Education, a US higher education company, rallied in April after strong first-quarter earnings and a steady recovery in student enrollments. Strategic Education remains well-positioned to take advantage of the increasing demand for both on-premise and online education. In our opinion, the company's earnings growth outlook remains promising, supported by solid demand and the potential for further margin expansion. During the month, a Reuters article suggested that the Biden administration may reintroduce tariffs on bifacial solar panels. Additionally, a coalition of US domestic solar manufacturers filed a set of petitions for increased antidumping and countervailing duties on cheap imported panels. Both actions stem from accusations that foreign manufacturers are selling solar panels into the US market below cost. As a domestic solar panel manufacturer, First Solar stands to benefit from increased protectionist policies since these reduce downward pricing pressure in the market. Erste is our second largest position in the banks sector. It beat the European banks index that rose +1.6%, as well as our benchmark that fell 4.4% over April. Both the rates and equity markets are beginning to price in higher-for-longer policy rates, implying stronger-than-expected revenues at banks. Erste's strong underwriting practices and large cushions against any credit deterioration are beginning to be more fully appreciated by the market.

The largest three negative contributors in April were Brunswick (-15%), Jabil (-11.4%) and Koito Manufacturing (-19%). Brunswick manufactures recreational boats and high horsepower engines, which US consumers buy on credit. Post-Covid, demand has been declining for two years, and current high interest rates further dampen end-market demand. As borrowing rates have increased, consumers are reluctant to spend on high-ticket items, and we expect 2024 to be a low-demand year. Nevertheless, the company is well-positioned towards the premium consumer, and its parts business generates strong cash flows that support our longer-term investment thesis. Jabil reported that the CEO will be placed on paid leave while an investigation is conducted. The investigation does not relate to the financial results of the company, but the exact nature was not disclosed. Each of Jabil's two operating segments have their own CEOs which should maintain continuity of operations. Based on the guidance provided for FY2025, we believe the shares are still undervalued. Koito, a leading Japanese headlamp supplier to primarily Japanese and US auto producers, appreciated 34% in March on the back of a large share buyback announcement. However, in April, the shares gave back most of the gains as market participants questioned the longer-term profitability outlook. In our opinion, the shares trade at a steep discount to intrinsic value, and the current undervaluation already reflects continued margin shortfall in the US and China. VLK continues to engage with the company and expects a steep improvement in corporate governance, which should support a higher market valuation.

Sustainability-related disclosures

No Sustainable Investment Objective

The Kempen Global Small-cap Fund (the "Fund") falls under the scope of article 8 of the SFDR, indicating the fund promotes environmental and/or social characteristics. The fund does not have sustainable investment as its objective, but will have a minimum proportion of 15% of sustainable investments.

The Fund excludes companies through the application of strict exclusion criteria. These take into account international standards, such as the UN Global Compact framework, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles for Business and Human Rights, and our Principles for Responsible Investment commitments. The Fund applies additional exclusion criteria based on product involvement and business conduct.

Environmental Or Social Characteristics Of The Financial Product

The Fund promotes environmental characteristics related to:

- Climate change mitigation and climate change adaptation in line with the Paris Climate Agreement;
- The protection of biodiversity and ecosystems;
- The transition to a circular economy.

The Fund promotes social characteristics related to:

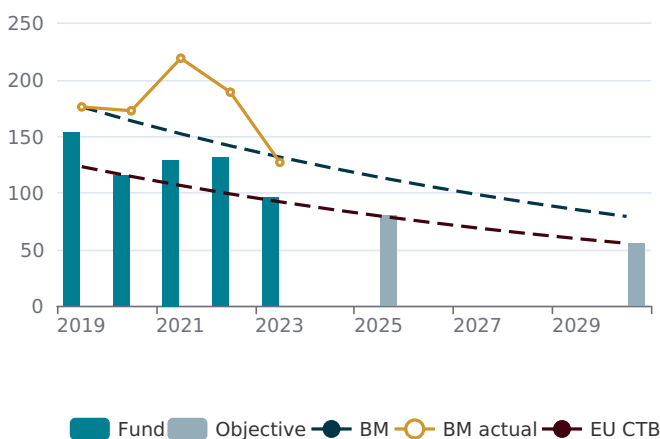

- Decent work;
- Adequate living standards and wellbeing for end-users;
- Other social topics such as gender equality and broader diversity matters.

The environmental characteristics promoted by the Fund seek to contribute to the achievement of the climate goals of the Paris Agreement and the National Climate Agreement of the Netherlands ('Klimaatakkoord'). This decarbonization pathway encompasses short-term (2025) objectives, a mid-term (2030) ambition and a long-term commitment to be net zero by 2050. Although there has been no index designated as a reference benchmark, by 2025 the Fund aims to have a carbon intensity that is below the EU Climate Transition Benchmark (EU CTB) pathway. This pathway assumes a carbon intensity that is 30% lower than the MSCI World Small-cap Index in 2019 with a subsequent 7% annual reduction.

ESG Label

Investment Strategy

The Fund offers an actively and professionally managed portfolio of smaller listed companies, while at the same time complying with strict exclusion and sustainability criteria. The Fund primarily aims to generate a long-term return in excess of the MSCI World Small Cap Index (the "Benchmark"), comprising capital gains or losses plus net dividend. Our ESG-policy, described in the ESG Policy & Process document, is aimed at the promotion of environmental and/or social characteristics. This ESG policy is implemented in our strategy's investment process across four pillars: Exclusion, ESG Integration, Active ownership and Positive impact.

Before and after selecting the asset, we apply adequate (ESG) due diligence measures. This can help to enhance long-term risk adjusted returns for investors, in accordance with the investment objectives of the Fund. We look at each company on a case-by-case basis, taking into account both material risks in a given industry and the company's respective risk exposure, practices and disclosure. This includes:

- an assessment of good governance practices. The investee companies are rated for governance aspects using external research and internal assessments.
- the company's exposure to past controversies and future ESG opportunities

Based on fundamental ESG analysis we form an opinion on the quality of a company's ESG profile and award a score (1-5).

Proportion Of Investments

Information about the proportion of investments with environmental or social characteristics is available in the annex II of this product.

Monitoring Of Environmental Or Social Characteristics

The holdings are screened quarterly for compliance with Kempen's ESG criteria. The screening process allows Kempen to monitor the ESG performance of all companies in the fund. It also encourages engagement on potential issues identified. Furthermore, the results of the screening feeds into quarterly challenging sessions between ESG specialists and portfolio managers. These sessions are used to assess whether ESG risks and opportunities are sufficiently reflected in the investment decision making process of Kempen.

Methodologies

Principal Adverse Impact Indicators are monitored at individual holding level and at the portfolio level.

Kempen ESG Score serves as input throughout the investment process (exclusion, integration in the valuation models, engagement). Scores are based on 21 ESG risk factors, which are selected based on their materiality per industry.

Carbon emission intensity is used as the key carbon metric. We calculate carbon intensity based on revenues (weighted average carbon intensity), which we use for our commitment, ambition and objectives.

EU Taxonomy alignment is measured by turnover, for which we use a combination of actual data from investee companies and estimates on EU Taxonomy alignment made by a third party provider.

Engagement Milestones are used in order to measure engagement success. All engagement contacts are recorded and classified: Milestone 1 (company is informed), Milestone 2 (company acknowledges request), Milestone 3 (company commits to improve), up until Milestone 4 (proof of improvement).

Limitations To Methodologies And Data

Externally provided ESG data is far from perfect. Therefore we conduct rigorous due diligence of the data used in our ESG processes to ensure the limitations will not affect the environmental and social characteristics. To ensure data quality we regularly engage with portfolio companies and third party vendors. Limitations include, but are not limited to discrepancies between company reported data and data provided by third parties, inconsistencies across data vendors, market cap bias and modelling assumptions.

Due Diligence

Before a company is invested in, Portfolio Managers perform a due diligence on potential ESG risks and principal adverse impact indicators, opportunities, as well as potential past controversies. ESG due diligence is integrated in the different stages of the investment process (screening of the investable universe, fundamental research & portfolio management). ESG specialists challenge the portfolio managers on the implementation of the ESG process on a quarterly basis.

Data Sources And Processing

External data providers include (but are not limited to):

- Institutional Shareholder Services (ISS), used for proxy voting, governance research, carbon data and Sustainable Development Goals data;
- MSCI ESG Research: used for company ESG Ratings, product involvement data, principal adverse indicators and to assess the degree to which the investments are in environmentally sustainable economic activities under the EU Taxonomy, measured by turnover;
- Sustainalytics: used for ESG Risk Ratings and product involvement data.

Internal as well as external data is collected and processed in several data analytics (including FactSet, PowerBI, Tableau) and internal compliance systems (including ThinkFolio).

Kempen (Lux) Global Small-cap Fund (the “Sub-Fund”) is a sub-fund of Kempen International Funds SICAV (the “Fund”), domiciled in Luxembourg. This Fund is authorised in Luxembourg and is regulated by the Commission de Surveillance du Secteur Financier. Van Lanschot Kempen Investment Management NV is the management company of the Fund. Van Lanschot Kempen Investment Management NV is authorised as management company and regulated by the Dutch Authority for the Financial Markets (AFM).

Paying agent and representative in Switzerland is RBC Investor Services Bank S.A., Esch-sur-Alzette, Zurich Branch, Bleicherweg 7, CH-8027 Zurich. The Sub-Fund is registered with the Dutch Authority for the Financial Markets (AFM) under the license of the Fund.
