ESG Selectivity Rate and Human Rights

Between 60% and 70% of the stocks of AllianzGI GmbH European equities universe are eligible to ESG plan and human rights.

ESG Ratings

Fonds	Corporate Governance	2.85
	Environment	2.86
	Market Behaviour	2.59
	Social	2.70
	ESG Rating	2.74

Opportunities

- + A low-risk investment, which historically offers low volatility and an investment universe that is comprised of non-speculative ("investment grade") securities
- + Selection of securities based on the consideration of financial and socially responsible investment criteria

Risks

- Credit risk: if the issuer defaults, there is a risk that the coupon and/or nominal amount of the assets may not be paid in full, their value may fall, or the value of the UCI may be reduced
- Interest rate sector risk: as the interest rate universe is very broad, some segments are more volatile than others

FOR FUND DISTRIBUTORS AND PROFESSIONAL INVESTORS ONLY

- 1) Calculated at the net asset value, excl. front-end load, distributions reinvested. Calculation according to method as defined by BVI, the German Fund Companies Association. **Any front-end loads reduce the capital employed and the performance.** All performance data since 08/07/2010 of Allianz Euro Oblig Court Terme ISR - RC - EUR prior to the launch date, 01/04/2014 refer to another share class of the same investment fund. This does not imply that Allianz Euro Oblig Court Terme ISR - RC - EUR will experience a similar performance in the future. All share classes/investment funds mentioned above are based on the same investment objectives and strategies as well as risk profiles and fee structures. Past performance does not predict future returns
- 2) Benchmark history: until 31/05/2021 EONIA (in EUR), until 31/03/2014 EONIA Simple Interest ACT/360
- 3) SFDR: EU Sustainable Finance Disclosure Regulation. Information accurate at time of publishing.
- 4) The Sharpe ratio states the relationship between the return generated by the fund and the investment risk. The fund's excess return versus the risk-free market rate is compared to volatility. Negative values are not meaningful.
- 5) Volatility measures the fluctuation range of the fund's performance over a specified period of time.
- 6) This is for guidance only and not indicative of future allocation.
- 7) Breakdown based on best available rating for each security. Data published by index provider may differ due to different calculation methodologies.
- 8) If the acquisition of Fund units is subject to a sales charge, up to 100% of such sales charge may be collected by the distributor; the exact amount shall be mentioned by the distributor as part of the investment advisory process. This also applies to any payment by the Management Company of an ongoing distribution fee from the all-in fee to the distributor. The all-in fee includes the expenses previously called management, administration and distribution fees.
- 9) TER generally: Total cost (except transaction costs) charged to the fund during the last financial year. TER for funds-of-funds: The costs incurred by the fund itself (except transaction costs). Since the fund held other investment units ("target funds") in the reporting period, further costs, charges and fees may have been incurred at the level of the target fund.
- 10) Represents the lowest potential yield that an investor could theoretically receive on the bond up to maturity if bought at the current price (excluding the default case of the issuer). The yield to worst is determined by making worst-case scenario assumptions, calculating the returns that would be received if worst-case scenario provisions, including prepayment, call or sinking fund, are used by the issuer (excluding the default case). It is assumed that the bonds are held until maturity and interest income is reinvested on the same conditions. Calculation is before currency hedging. The yield to worst is a portfolio characteristic; in particular, it does not reflect the actual fund income. The expenses charged to the fund are not taken into account. As a result, the yield to worst is not suitable as an indicator of the future performance of a bond fund. Forecasts are not a reliable indicator of future results.
- 11) The yield to maturity of a bond indicates what capital growth p.a. is theoretically possible up to maturity, if bought at the current price. In addition to coupon income, any price gains/losses up to repayment of the bond are taken into account. The yield to maturity of a fund is the weighted average of the yield to maturity of all the bonds that are held. It is assumed that the bonds are held until maturity and interest income is reinvested on the same conditions. The yield to maturity is a portfolio characteristic; in particular, it does not reflect the actual fund income. The expenses charged to the fund are not taken into account. As a result, the yield to maturity is not suitable as an indicator of the future performance of a bond fund.
- 12) Notation scale from 0 to 4. At least 100% of portfolio assets must comply with our human rights standards (an ex ante filter is applied) and at least 95% of portfolio asset must have an ESG rating of 2 or more (the ESG rating being calculated on the basis of a weighted average of the other four criteria – weightings varying according to the sector of the issuer).

Disclaimer

Investing involves risk. The value of an investment and the income from it may fall as well as rise and investors might not get back the full amount invested. Investing in fixed income instruments may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including positions with respect to short-term fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values of these instruments are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions. Allianz Euro Oblig Court Terme ISR is an open-ended investment fund organised under the laws of France. Past performance does not predict future returns. If the currency in which the past performance is displayed differs from the currency of the country in which the investor resides, then the investor should be aware that due to the exchange rate fluctuations the performance shown may be higher or lower if converted into the investor's local currency.
