Benchmark ²	CS Leveraged Loan Index (TR)

Investment Policy

The aim of the Fund is to provide a high level of risk adjusted income by investing in higher yielding, secured and unsecured floating rate senior loans and other secured and unsecured senior floating rate debt instruments issued by corporations and other businesses globally. The Fund can also invest in certain derivative instruments. The Fund invests in instruments which are typically rated below investment grade credit quality (BB+ or below) or, if not rated, will be of equivalent credit quality. The underlying portfolio seeks to diversify its investments across issuers and industries at all times.

Investing involves risk including the risk of loss of capital. Past performance does not predict future returns. Neither simulated nor historical performance is a reliable indicator for current or future performance.

Potential Risks

The Fund's risk and reward profile does not reflect the risk inherent in future circumstances that differ from what the Fund has experienced in the recent past. This includes the following events which are rare but can have a large impact.

- Credit risk: Issuers of assets held by the Fund may not pay income or repay capital when due. The Fund's investments have considerable credit risk.
- Liquidity risk: Assets cannot necessarily be sold at regular cost in an adequately short timeframe. The Fund's investments may be prone to very limited liquidity. The Fund will endeavor to mitigate this risk by various measures.
- Valuation risk: The value of certain assets held by the Fund may be inherently difficult to establish and is potentially the subject of substantial uncertainty.
- Counterparty risk: Bankruptcy or insolvency of the Fund's derivative counterparties may lead to payment or delivery default. The Subfund will endeavor to mitigate this risk by the receipt of financial collateral given as guarantees.
- Operational risk: Deficient processes, technical failures or catastrophic events may cause losses.
- Political and Legal risks: Investments are exposed to changes of rules and standards applied by a specific country. This includes restrictions on currency convertibility, the imposing of taxes or controls on transactions, the limitations of property rights or other legal risks.
- Sustainability risks: Sustainability risks are environmental, social or governance events or conditions that can have a material negative effect on the return, depending on the relevant sector, industry and company exposure.

The product's investment objectives, risks, charges and expenses, as well as more complete information about the product, are provided in the prospectus (or relevant offering document), which should be read carefully before investing.

Investors may lose part or all of their invested amount.

The Fund's use of leverage may lead to an amplified reaction to market movements, i.e. increase the volatility of the Fund and may amount to a more substantial loss than in unleveraged products.

The full offering documentation including complete information on risks may be obtained free of charge from a Credit Suisse client advisor, representative, or, where applicable, via Fundsearch (credit-suisse.com/fundsearch).

The investment promoted in this marketing material concerns the acquisition of units or shares in a fund and not of any underlying assets. The underlying assets are owned by the fund only.

Risk profile⁴

PRIIP SRI

Larger values (up to 7) indicate higher risk while lower values (up to 1) indicate lower risk.

⁴ The risk indicator assumes you keep the Product for 5 years. The actual risk can vary significantly if you redeem at an early stage and you may get back less. The Summary Risk Indicator is a guide to the level of risk of this Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the markets. Be aware of currency risk if your reference currency differs from the currency of the Product. You may receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. Investors shall note that the Product may be exposed to further risks such as operational, counterparty, political, sustainability and legal risks that are not included in the Summary Risk Indicator. This Product does not include any protection from future market performance so you could lose some or all of your investment.

⁵ If the currency of a financial product and/or its costs is different from your reference currency, the return and cost may increase or decrease as a result of currency fluctuations.

Past performance does not predict future returns. Neither simulated nor historical performance is a reliable indicator for current or future performance.

Quarterly Portfolio Commentary

The CS Nova (Lux) Global Senior Loan Fund returned 2.72% on a gross basis in Q1 2024, outperforming the Credit Suisse Leveraged Loan Index by 20 basis points.

For the first quarter, the fund's out of benchmark allocation to high yield bonds detracted from its relative performance versus the index.

From a sector perspective, Healthcare and Information Technology were both positive contributors to performance. Within both sectors, security selection contributed to outperformance. Media/Telecommunications and Financial were detractors to performance. Within Media/Telecommunications, security selection detracted from outperformance. And within Financial, security selection and an overweight position versus the benchmark detracted from outperformance.

From a rating perspective, B3 was a positive contributor to performance due to security selection, while Caa3 was a detractor to performance due to security selection.

The fund continues to be overweight in Financial, Information Technology, and Manufacturing, and is underweight in Healthcare, Retail, and Gaming/Leisure.

AUM finished the quarter at USD 2,833.07mn, up from USD 2,804.54mn at the end of December 2023.

Quarterly Market Review

Senior loan market returns were positive in the first quarter of 2024, with the Credit Suisse Leveraged Loan Index returning 2.52%, following 2.85% in the previous quarter.

The discount margin of the index, assuming a three-year average life, tightened by 19 basis points and finished the month of March at 509 basis points. The average price of the index increased by 69 basis points, finishing Q1 at 96.01.

Every industry in the Credit Suisse Leveraged Loan Index posted positive returns in the first quarter and extends to the sixth consecutive quarter of positive returns. Retail, Chemicals, and Food and Drug were the top sector performers, returning 3.51%, 3.43%, and 3.17%, respectively. Media/Telecommunications, Metals/Minerals, and Financial were the bottom sector performers, returning 1.57%, 1.88%, and 1.94%, respectively.

Organized by rating tier, the lower tier, returning 5.13%, outperformed the middle tier with returns of 2.50%, and the upper tier with returns of 1.90%.

Outlook

The momentum with which we ended 2023 continued through the first quarter of 2024. The loan market returned 2.5%, driven primarily by CCC issuers, followed by single B and then BB. The beginning of the quarter was disproportionately influenced by repricing transactions given limited new issue supply in the market, and a significant percentage of the market trading above par. As we moved through the quarter, we believe the combination of repricing fatigue, increased new issue supply, private credit deals refinanced into the BSL market, and CLOs (collateralized loan obligations) being called (i.e. "secondary supply") somewhat quelled the re-pricing wave (they are occurring, but the pace has seemed to slow). Monthly loan market returns were generally in line with the coupon as prices have been somewhat rangebound - so much of the market was trading around par, so price appreciation potential was limited. However, given the constructive demand for loans from CLO buyers - new CLOs, ramping funds, warehouses - that even despite trading near par, spreads compressing, and increasing supply, there was support for performing loans to keep prices in that near-par range. The primary segment where price appreciation was possible has been for lower rated, lower priced loans due to the discount. As such, we saw the pricing of cuspiers B3s and CCCs increase the most (given they are trading at the largest discount), single Bs have generally been flat, and double BB prices fell slightly to compensate for the lower spreads and rotation into riskier loans. We believe the support for the favorable technical environment is a strong macroeconomic backdrop. We expect rates to stay elevated given strong economic data, increased confidence in the economy, and the higher for longer mantra. As a result, the elevated carry has benefitted floating rate investors.

We believe the most attractive opportunities are buying primary issuance, increasing exposure to short-maturities issuers which we feel may get refinanced via BSL (Broadly Syndicated Loans) or private credit, and reducing exposure to issuers which we perceive to have credit risk which we believe are trading at elevated levels (due to the demand for the discount). Given where the market is trading, we believe there is downside risk related to earnings misses, bespoke end-market challenges, and overly aggressive issuers pursuing liability management exercises.

It is not possible to invest in an index. The index returns shown do not represent the results of actual trading of investable assets/securities. Investors pursuing a strategy similar to an index may experience higher or lower returns and will bear the cost of fees and expenses that will reduce returns.

To the extent that these materials contain statements about the future, such statements are forward looking and are subject to a number of risks and uncertainties and are not a guarantee of future results/performance.

Glossary

Accumulating	Indicates a regular reinvestment of the dividends received in the portfolio itself
Ex post	Refers to metrics based on historical data
Information ratio	This statistic measures how much a fund's out-performance may be attributed to manager skill as oppose to market movement. A high Information Ratio infers more manager skill than a low value would suggest.
ITD	Inception-to-date
Maximum drawdown	Represents the worst possible result (in percentage terms) that occurred during the period being analyzed.
MTD	Month-to-date
NAV	Net Asset Value
Ongoing Charges	The calculation of the ongoing charge is based on the Committee of European Securities Regulators/10-674 Directive. For a maximum of 12 months from fund fiscal year end and since inception, the ongoing charges figure is based on estimated expenses. After that, the ongoing charges correspond to the TER of the last annual report. It excludes performance fees and portfolio transaction costs, except in the case of an entry/exit charge paid by the fund when buying or selling shares/units in another collective investment undertaking.
QTD	Quarter-to-date
Rating	A measure of creditworthiness of a financial instrument (e.g. bond) or their issuer (e.g. corporate or sovereign). They are published by credit rating agencies and can be combined into a single representative metric.
Sustainable Finance Disclosure Regulation (SFDR)	Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector
TNA	Total Net Assets
Tracking error	Measure of the deviation of the return of a fund compared to the return of a benchmark over a fixed period of time.
YTD	Year-to-date

Warning statements

Asset breakdown	Indicative allocation may change over time. All holdings are shown strictly for information purposes only and do not constitute investment recommendations of Credit Suisse. Please note that this does not constitute an offer or a solicitation to buy or sell any interest or any investment.
Swinging Single Pricing	For more details, please refer to the relevant chapter "Net Asset Value" of the fund's prospectus
Performance start date	Performance calculation and presentation start with the first full month of an invested strategy. This can lead to a difference in launch and performance start dates.
PRIIP SRI	The Summary Risk Indicator is a guide to the level of risk of this Product compared to other products. It shows how likely it is that the Product will lose money because of movements in the markets.
Yield to maturity/Yield to worst	The shown yield to maturity/yield to worst is calculated as of 31.03.2024 and does not take into account costs, changes in the portfolio, market fluctuations and potential defaults. The yield to maturity / yield to worst is an indication only and is subject to change.
