#### FUND OVERVIEW

The investment strategy of the Fund is deemed by the Directors of the Fund to be capacity constrained. Buying Shares in the Fund (or converting shares from another fund) is capped at a daily limit of EUR 5 million (or the equivalent thereof) per investor until further notice except at the discretion of the Directors of the Fund (you can still sell your Shares daily without limit). The Fund aims to provide long term capital growth (including income) on your investment through the use of an extension strategy, meaning that, in addition to having up to 100% of the Fund's assets exposed to equity securities (e.g. shares) via long positions and/or synthetic long positions, the intention is to enter into synthetic short positions, to achieve additional investment exposure. The investment adviser (IA) will use the proceeds from these to buy additional synthetic long positions (broadly in the same proportion as the short positions it holds). Through a long position the Fund aims to profit by choosing assets that will rise in value. A short position is the sale of an asset which the Fund does not physically own with the aim of buying it later at a lower price to secure a profit. The Fund seeks to gain at least 70% of any investment exposure to equity securities and other equity-related (E-R) securities, of companies domiciled in, or the main business of which is in, Europe (including former Soviet Union countries) and, when determined appropriate, fixed income (FI) securities (such as bonds), money market instruments (MMIs) (i.e. debt securities with short-term maturities), deposits and cash. The E-R securities include financial derivative instruments (FDIs) (i.e. investments the prices of which are based on one or more underlying assets). FDIs may be used to help achieve the Fund's investment objective and the IA intends to generate market leverage via FDIs (i.e. where the Fund gains market exposure in excess of the value of its assets). A significant portion of the Fund's assets may be invested in total return swaps and contracts for difference. The FI securities and MMIs may be issued by governments, government agencies, companies and supranationals (e.g. the International Bank for Reconstruction and Development) and may be investment grade (i.e. meet a specified level of credit worthiness), non-investment grade or unrated at the time of purchase.

#### GROWTH OF HYPOTHETICAL 10,000 EUR SINCE INCEPTION

Share Class and Benchmark performance displayed in EUR. Source: BlackRock. Performance is shown on a Net Asset Value (NAV) basis, with gross income reinvested. **Past performance is not a guide to future performance.**

#### % CALENDAR YEAR RETURNS

Share Class performance is calculated on a Net Asset Value (NAV) basis, net of fees in the dealing currency specified and do not include sales charge or taxes. Returns assume reinvestment of any distributions. Past performance is not a guide to future performance and should not be the sole factor of consideration when selecting a product.

**CAPITAL AT RISK:** The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

#### RATINGS

**KEY RISKS:** All financial investments involve an element of risk. Therefore, the value of your investment and the income from it will vary and your initial investment amount cannot be guaranteed. The fund invests a large portion of assets which are denominated in other currencies; hence changes in the relevant exchange rate will affect the value of the investment. The fund may invest in smaller company shares which can be more unpredictable and less liquid than those of larger company shares. Derivatives may be used substantially for complex investment strategies.

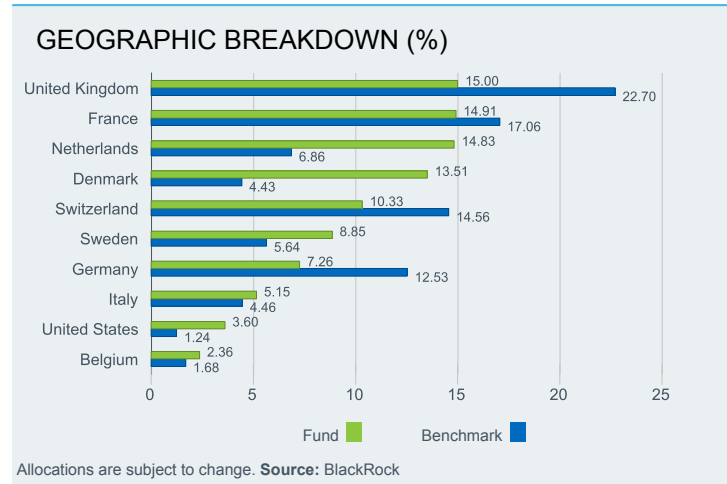

**(Continued on page 2)**

**Key Risks Continued:** These include the creation of short positions where the Investment Manager artificially sells an investment it does not physically own. Derivatives can also be used to generate exposure to investments greater than the net asset value of the fund / investment trust. Investment Managers refer to this practice as obtaining market leverage or gearing. As a result, a small positive or negative movement in stockmarkets will have a larger impact on the value of these derivatives than owning the physical investments. The use of derivatives in this manner may have the effect of increasing the overall risk profile of the Funds.

The Morningstar Analyst Rating is not a credit or risk rating. It is a subjective evaluation performed by the manager research analysts of Morningstar. Morningstar evaluates funds based on five key pillars, which are process, performance, people, parent, and price. Analysts use this five pillar evaluation to determine how they believe funds are likely to perform over the long term on a risk-adjusted basis. They consider quantitative and qualitative factors in their research, and the weighting of each pillar may vary. The Analyst Rating scale is Gold, Silver, Bronze, Neutral, Negative. A Morningstar Analyst Rating of Gold, Silver, or Bronze reflect an Analyst's conviction in a fund's prospects for outperformance. Analyst Ratings are continuously monitored and reevaluated at least every 14 months. For more detailed information about Morningstar's Analyst Rating, including its methodology, please go to <http://corporate.morningstar.com/us/documents/MethodologyDocuments/AnalystRatingforFundsMethodology.pdf>. The Morningstar Analyst Rating should not be used as the sole basis in evaluating a mutual fund. Morningstar Analyst Ratings are based on Morningstar's current expectations about future events; therefore, in no way does Morningstar represent ratings as a guarantee nor should they be viewed by an investor as such. Morningstar Analyst Ratings involve unknown risks and uncertainties which may cause Morningstar's expectations not to occur or to differ significantly from what we expected Morningstar rates mutual funds from one to five stars based on how well they've performed (after adjusting for risk and accounting for all sales charges) in comparison to similar funds. Within each Morningstar Category, the top 10% of funds receive five stars, the next 22.5% four stars, the middle 35% three stars, the next 22.5% two stars, and the bottom 10% receive one star. Funds are rated for up to three time periods--three-, five-, and 10 years--and these ratings are combined to produce an overall rating. Funds with less than three years of history are not rated. Ratings are objective, based entirely on a mathematical evaluation of past performance. They're a useful tool for identifying funds worthy of further research, but shouldn't be considered buy or sell recommendations. Morningstar Rating metrics. Morningstar, Inc.® 2023.
