## Key benefits

- Clients profit from the return potential of corporate bonds, which is higher than that of government bonds.
- Active portfolio management ensures that particular attention is paid to the prevailing economic situation, sector selection and issuers' credit ratings.
- Risk is kept in check via meticulous company analysis and broad diversification of the portfolio.
- The fund is particularly appropriate for clients with a medium-term investment horizon who are willing to take on more risk than for investments in government bonds in order to benefit from potentially attractive returns.

## Risks

Even though the credit quality of the portfolio is investment grade, the default risk is higher with corporate bonds than with government paper. Changes in interest rates have an effect on the value of the portfolio. This requires corresponding risk tolerance and capacity. All investments are subject to market fluctuations. Every fund has specific risks, which may increase considerably in unusual market conditions. The fund can use derivatives, which may result in additional risks (particularly counterparty risk).
