

UBS Bond Inflation-linked Global

Fund Fact Sheet

UBS Bond Funds > UBS Inflation-linked Bond Funds

Fund description

- Inflation-linked bonds are bonds for which coupons and redemption proceeds are tied to a consumer price index, allowing these bonds to maintain their real value in almost any economic environment.
- It is globally diversified across regions, ratings and maturities.
- The fund is actively managed. The aim is to outperform nominal bonds and to preserve the purchasing power of client investments against inflation over a three to five-year horizon.
- The exchange rate risk between USD and CHF is largely hedged.

| Japanese Government Bond | 3.88 | Deutsche Bundesrepublik | 1.45 |

Key benefits

- Investors can protect the purchasing power of their investment against inflation over a 3- to 5-year horizon.
- Credit risk (individual issuer defaults) is reduced thanks to the portfolio's broad diversification and good overall borrower quality (predominantly governments).

Risks

As with other portfolios, changes in interest rates and inflation have an impact on the portfolio's value. Coupon payments move in parallel with changes in inflation, i.e. they increase when inflation rises and decrease in a deflationary environment. In terms of the par value paid out on maturity, the capital invested for inflation-linked bonds with a deflation floor does not fall below the par value. However, for inflation-linked bonds with no deflation floor, the capital invested can fall below the par value. The majority of inflation-linked bonds are issued by governments. Inflation-linked bonds that are issued by companies have a higher default risk than government bonds, and therefore require investors to have corresponding risk tolerance and capacity. All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. The fund can use derivatives, which may result in additional risks (particularly counterparty risk).
