Risks

The fund may invest in bonds of varying credit quality, money market securities and equities and may be subject to high volatility. This requires corresponding risk tolerance and capacity. The value of a unit may fall below the purchase price. The value of a unit may be influenced by currency fluctuations. The fund may use derivatives, which can reduce or increase investment risk (including the risk of loss due to the bankruptcy of the counterparty). Pronounced fluctuations in price are characteristic of emerging economies. Other characteristics include specific risks such as lower market transparency, regulatory hurdles, illiquidity of markets as well as political and social challenges. Investments via Shanghai or Shenzhen Stock Connect are subject to additional risks, in particular quota limitations, custody risk, clearing/settlement risk and counterparty risk. The fund can invest in less liquid assets that may be difficult to sell in distressed markets. Sub-investment grade bonds are usually subject to a high credit risk (i.e. potential loss due to failure of issuer). Emerging market bonds are usually subject to a high credit risk (i.e. potential loss due to failure of issuer). Conversion Risk can arise from the use of contingent convertibles. Contingent convertibles are subject to equity conversion or principal writedown, if bank regulatory capital falls below predefined thresholds. Every fund reveals specific risks, a detailed and comprehensive list of risk descriptions can be found in the prospectus.

Warning: this fund can invest a percentage of 49.99% in low credit quality fixed income issues, so it has a very high credit risk.
