### BL Global 75, class B CHF HEDGED (LU1305478429)

a sub-fund of BL

Management Company: BLI - Banque de Luxembourg Investments

## Objectives and investment policy

#### Objectives

Seeking a reward and a capital gain with an average volatility.

#### Investment policy

This mixed dynamic sub-fund invests in shares, bonds, including inflation-linked bonds and money market instruments.

The allocation of neutral assets in this sub-fund consists of investing around 75% of its net assets in shares.

A minimum of 60% and a maximum of 90% of the sub-fund's net assets are invested in shares.

In order to achieve its objective, the sub-fund may invest a maximum of 10% of its net assets in open-ended investment funds.

The sub-fund may also use derivative products for hedging purposes or in order to optimise the portfolio's exposure.

The investment manager integrates and promotes sustainability factors within his equity investment strategy by applying non-financial data to the issuer valuation model. In terms of bond investments, the sub-fund will be invested exclusively in securities issued or guaranteed by states aligned with the provisions of the Paris Agreement.

Investments are made without any geographical, sector-based or monetary restrictions.

Bonds and other equivalent securities may be issued by companies, states or other entities.

The underlying funds are selected on the basis of quantitative then qualitative

criteria. The monitoring process is performed through regular contact with the managers of each of the underlying funds in the portfolio. The objective is to use underlying funds which best meet the themes, styles, regions and representative sectors of the fund manager's convictions.

For this share class, the foreign-exchange risk of the share currency is systematically hedged against the sub-fund's reference currency. However, due to the volatility of the underlying portfolio, the SICAV cannot guarantee that the exchange-rate risk will be hedged 100%. Therefore, a residual foreign-exchange risk cannot be ruled out.

The portfolio is actively managed on a discretionary basis without using a reference benchmark.

The reference currency of the sub-fund is expressed in EUR. The currency of the share class is expressed in CHF.

The investor has the right to redeem his shares on demand. The dealing in shares is carried out on each complete bank business day in Luxembourg. The attention of the investor is drawn to the fact that in exceptional circumstances, the possibility for the investor to request the redemption of his shares may be limited or suspended.

These shares are capitalisation shares. Income and capital gains are reinvested.

#### Recommendation

This fund may not be appropriate for investors who plan to withdraw their money within 6 years.

## **Risk and reward profile**

#### What does this synthetic indicator mean?

- The shares of class B CHF HEDGED are classified in category 4 because the value of the share may be subject to medium variations and consequently the risk of loss and the opportunity of gain may be moderate.
- The risk category has been determined on the basis of historical data and may not be a reliable indication of the future risk profile. The risk and reward category shown does not necessarily remain unchanged and the categorisation of the fund may shift over time.
- The lowest category does not mean a risk-free investment.
- Repayment of the initial investment is not guaranteed.

## Which materially relevant risks are not adequately captured by the synthetic indicator?

• The investment in shares bears an issuer risk insofar as the issuing company might go bankrupt. This may result in significant or even total losses of the value of the investments in these instruments.

- The investment in debt instruments bears a credit risk insofar as the issuer may refuse or be in a position where it is not able to reimburse all or part of the interests or even of the principal due on the debt instruments. This may result in significant or even total losses of the value of the investments in these debt instruments.
- The investment in emerging markets exposes the sub-fund to risks related to political, regulatory, financial or fiscal instabilities or uncertainties that may negatively affect the value of the investments or even question the ownership title of the sub-fund.
- Share index futures will be used for reducing the risks of the share markets, but will not as such eliminate them.
- The use of currency hedging techniques, hedging the currency of the share class against the currency of the sub-fund, aims at reducing the currency risks without, however, eliminating those risks totally.
- Other risk factors, that an investor shall take into account with regards to his own situation and specific current and future circumstances, may exist.
