Portfolio managers comments

The good trend in earnings releases observed in July continued in August, for both listed and unlisted debt-issuing companies. Balance sheets, which were severely affected by the crisis last year, are now in a rapid recovery phase. The vast majority of European and global leaders in the portfolio have consolidated or even strengthened their market shares, thanks to the cost-cutting plans introduced and the use of all available public aid. The maintenance of extremely favourable financing conditions is the key to this resistance. The slight rise in interest rates over the month, entirely linked to the rebound in inflation expectations, pushed down the bond markets, within which high-yield credit saw its spreads compress, and equities fell by nearly 3%.

Thanks to its allocation to equities and credit, Invest Eurose continued to rise (1.07% over the month) and posted a year-to-date performance of 6.33%.

During the month, the fund increased its exposure to Akka Technologies, BNP Paribas, Stellantis and TotalEnergies. Conversely, it reduced its positions in Bouygues, Orange and Société Générale. The fund also monetised the dividends received in shares of Crédit Agricole and EDF. At the end of August, Invest Eurose was 30.0% invested in equities (net of hedging) with significant exposure to the following sectors: banking, buildings and construction materials, energy, health and media. The portfolio's main holdings are : TotalEnergies (2.9%), Crédit Agricole (2.8%), Saint-Gobain (2.3%), STMicroelectronics (2.2%) and Bouygues (2.2%). The management team hedges part of the equity portfolio through the sale of futures contracts (EURO STOXX 50 and CAC 40), which was increased slightly in August to 3.75%. The financial characteristics of the portfolio show a still reasonable valuation with a P/E for the current year of 11.5x (EURO STOXX 50 at 18.0x) for an expected earnings growth of +64%, the yield of dividends paid in 2021 is estimated at 3.5% (EURO STOXX 50 at 2.2%).

On the bond side, the reduction of senior non-preferred positions of the major European banks is still ongoing, depending on buying opportunities. Two new issuers are entering the portfolio via the primary market: Castellum, a Swedish listed company, leader in office and logistics real estate in the largest cities in the Nordic countries; Invest Eurose is investing in a hybrid bond issued in connection with the acquisition of its compatriot and competitor Kungsliden. The call is expected in 5.5 years, for a yield of 3.1%. The Danish bank Jyske Bank, in the context of a green bond issue in senior non-preferred format, also entered the portfolio, with an investment grade rating and a maturity of 5 years. After a strong performance, the Klöckner 2023 and Prysmian 2022 convertibles were sold, and the Unibail-Rodamco-Westfield (hybrid, call 2023) and Intesa SanPaolo 2023 lines were reduced. It should be noted that during the month ArcelorMittal and Kion, in the portfolio, had their credit ratings upgraded to investment grade by Moody's and S&P respectively.

The portfolio's good earnings performance in the first half of the year has led to a significant upward revision of the earnings outlook for 2021 and 2022. As a result, despite the performance of Invest Eurose's equity portfolio, its valuation levels have eased. These very reasonable ratios could act as a buffer if the expected change in monetary policy in the US were to weigh on the markets. On the credit side, many issues are expected in September, so the fund could continue to diversify its investments and optimise its risk/return ratio.

Glossary

Beta. Measures the average extent to which a fund moves relative to the broader market. The beta of a market is 1. A fund with a beta of more than 1 moves on average to a greater extent than the market. A fund with a beta of less than 1 moves on average to a lesser extent. If beta is a minus number, it is likely that the stock and the market move in opposite directions.

Correlation coefficient. The correlation coefficient is a measure of correlation. It is used to determine the relationship between two assets over a given period. A positive coefficient means that the two assets move in the same direction. Conversely, a negative coefficient means that the assets move in the opposite direction. The correlation or decorrelation can be more or less strong and varies between -1 and 1.

Dividend yield. Annual dividends per share / Price per share

EV (Enterprise Value). Market value of common stock + market value of preferred equity + market value of debt + minority interest - cash and investments.

Maturity. The time when a bond or other debt instrument is due to for redemption (is due to mature); or the length of time between the issue of such an instrument and the date it is due for redemption (the maturity date).

ND/EBITDA (Net Debt / EBITDA). A measurement of leverage, calculated as a company's interest-bearing liabilities minus cash or cash equivalents, divided by its EBITDA. The net debt to EBITDA ratio is a debt ratio that shows how many years it would take for a company to pay back its debt if net debt and EBITDA are held constant.

P/B. The Price to Book Ratio is the ratio of the market value of equity (market capitalisation) to its book value. It is used to compare the market valuation of a company with its book value.

P/CF (Share price/Cash Flow per Share). The price-to-cash-flow ratio is an indicator of a stock's valuation.

PER (Price Earnings Ratio). A company's share price divided by the amount of profits it makes for each share in a 12-month period. PE ratios are normally calculated on the base of all the profit made in the period, whether or not the profit is paid out to shareholders in that period.

Sensitivity. The sensitivity of a bond measures the change in its percentage value induced by a given change in interest rates.

Sharpe Ratio. A way of measuring the historical risk-adjusted return on an investment. It is the average previous return minus the risk-free return, divided by the standard deviation (a measure of risk that looks at the diversion of actual returns from expected returns).

Sharpe Ratio. The Sharpe ratio measures the excess return over the risk-free money rate of an asset portfolio divided by the standard deviation of that return. It is therefore a measure of the marginal return per unit of risk. It is used to measure the performance of managers with different risk policies.

Tracking error. Tracking Error is a measure of how closely an investment portfolio follows the index against which it is benchmarked. It is the difference in the return earned by a portfolio and the return earned by the benchmark against which the portfolio is constructed. For example, if a bond portfolio earns a return of 5.15% during a period when the portfolio's benchmark (say, for example, the Lehman Brothers Index) produces a return of 5.06%, the tracking error is .09%, or 9 basis points.
