

Twelve Insurance Best Ideas Fund P EUR

THIS IS A MARKETING DOCUMENT THAT ONLY OUTLINES CERTAIN KEY FEATURES OF THE PRODUCT. PLEASE ENSURE YOU READ THE PROSPECTUS, KEY INFORMATION DOCUMENT AND RELEVANT SUPPLEMENT BEFORE YOU MAKE A DECISION TO INVEST IN THE FUND.

Commentary

Insurance Bonds performance was slightly negative in May, following some further interest rate rises from central banks which continue to highlight the difficulties in controlling inflation. The Bank of England raised the base rate a further 25bps to 4.5%, whilst the US Fed raised rates by 25bps to 5% and the ECB 25bps to 3.25%. Reinsurance stocks showed a strong performance during May, benefitting from the attractive rate environment. In the Cat Bond space, and in the absence of any major events, spread tightening continued in May. The Atlantic hurricane season officially starts on 1 June. As a result of the increase in US wind Cat Bond exposure, Twelve Capital expects, in case of a mild hurricane season, a major performance contribution of this particular bucket over the next couple of months.

⁹ This shows the Fund's profitability at specific points on the percentile distribution of returns

¹⁰ Calculation based on data provided by AIR & RMS. Event sets of historical natural catastrophes run against current portfolio risks to generate loss estimates

Investment objective

The Fund is invested in liquid instruments in the insurance sector, including Insurance Bonds, Insurance-Linked Securities (ILS), Cat Bonds, as well as listed Insurance Equities. Twelve Capital's strategy seeks to exploit market inefficiencies in a highly regulated and complex sector. The Fund can take advantage of shorter-term seasonal dynamics by which Cat Bonds and Insurance Equities can perform strongly, albeit at different points in the cycle.

ESG

- The Fund promotes, among other characteristics, environmental and social characteristics (Art 8 SFDR - Sustainable Finance Disclosure Regulation).
- The investment process incorporates sustainability considerations by applying Twelve's Exclusion List Policy and utilising Twelve's Sustainability Impact assessments.

Risk factors

An investment in the Fund is associated with various risks which include:

Counterparty risk: The counterparty in a credit, or trading transaction may not fulfil its part of the deal and may default on the contractual obligations.

Equity risk: Equities may face significant fluctuations in market prices due to adverse issuer or market information and the subordinate status of equity in relation to debt paper issued by the same company.

Event risk: Should an insured event occur and the defined threshold values be exceeded, then the value of a specific ILS instrument may decrease to the extent of a total loss.

Interest rate risk: In particular fixed rate securities may be affected by changing interest rates which may reduce or increase the market value of a bond.

Model risk: The calculated event probability of certain events is based on risk models. These only represent an approximation of reality and may be fraught with uncertainty and errors. Consequently, event risks can be significantly under- or overestimated.

Valuation risk: Due to a wide variety of market factors, there is no guarantee that the value determined by the Administrator will represent the value that can be realised on the eventual disposition of the investment or that would, in fact, be realised upon an immediate disposition of the investment.

Glossary

Max. drawdown is the maximum cumulative loss from the historical peak to the following historical trough.

Asset weighted portfolio average **yield to expected buyback date**. Expected buyback dates are defined within the Twelve Capital proprietary analysis framework by reference to factors influencing capital utility. They represent Twelve Capital opinions on likely buyback dates and are not guaranteed.

The expected loss is an average figure indicating the loss that can be expected over one year, based on a simulation of at least 10'000 years of stochastic events.

Dynamic expected loss is an annualised, weighted average figure, indicating the loss that could be expected over the remaining risk period of all transactions. As for the expected loss, the calculation is based on a simulation of at least 10'000 years of stochastic events.

VaR is a measure that quantifies the level of risk within a portfolio. For a defined probability, the VaR is the threshold loss value to a portfolio that would be exceeded over a certain time period.

TVaR gives the expected value of the loss to the portfolio if the threshold loss value is exceeded.
